

Contents

Chapter 1. Introduction	1
Chapter 2. Parabolic Higgs bundles	5
1. Definitions and basic facts	5
2. Deformation theory	7
3. Parabolic Higgs bundles and gauge theory	9
Chapter 3. Morse theory on the moduli space	11
1. The Morse function	11
2. Fixed points of the S^1 action on the moduli space	12
3. Morse indices	14
4. Rank three parabolic Higgs bundles	16
5. Laumon's Theorem for parabolic Higgs bundles	16
Chapter 4. Parabolic triples	19
1. Definitions and basic facts	19
2. Parabolic Higgs bundles and parabolic triples	20
3. Extensions and deformations of parabolic triples	21
Chapter 5. Critical values and flips	25
1. Critical values	25
2. Crossing critical values and universal extensions	26
3. Flips	28
Chapter 6. Parabolic triples with $r_1 = 2$ and $r_2 = 1$	33
1. Flips	33
2. Poincaré polynomial of moduli of triples	35
Chapter 7. Critical submanifolds of type $(1, 1, 1)$	39
1. Description of the critical submanifolds	39
2. The sum for fixed ϖ .	42
3. The sum over ϖ .	44
Chapter 8. Critical submanifolds of type $(1, 2)$	47
1. Description of the critical submanifolds	47
2. The sum for fixed (ϖ, ε) .	48
3. The sum over ϖ and ε .	49
Chapter 9. Critical submanifolds of type $(2, 1)$	51
1. Description of the critical submanifolds	51
2. The sum for fixed (ϖ, ε) .	53
3. The sum over ϖ and ε .	53

Chapter 10. Betti numbers of the moduli space of rank three parabolic bundles	57
1. Notation	57
2. Holla's formula	58
3. The rank 3 case	58
Chapter 11. Betti numbers of the moduli space of rank three parabolic Higgs bundles	63
1. Poincaré polynomial	63
2. Special low genus cases	64
Chapter 12. The fixed determinant case	67
1. Preliminaries	67
2. Morse indices	68
3. Critical submanifolds of type $(1, 1, 1)$	69
4. Parabolic triples of fixed determinant	72
5. Critical submanifolds of type $(1, 2)$ and $(2, 1)$	75
6. Critical submanifolds of type (3)	76
7. Betti numbers of the fixed determinant moduli space	76
Bibliography	79
