Contents

Preface IX

1	Introduction 1
1.1	Theory and Models – Interpretation of Experimental Data 1
1.2	The Notation 3
1.3	Vector Space V^n and Function Space F^n 5
	The Scalar Product 5
1.4	Linear Transformation - Change of Basis 6
1.5	Normalisation and Orthogonalisation of Vectors 6
1.6	Matrix Representation of the Scalar Product 7
1.7	Dual Vector Space and Hilbert Space 8
1.8	Probability Concept and the Ψ Function 9
1.9	Operators 9
1.10	Representation of Operators in a Basis 10
1.11	Change of Basis in Representations of Operators 11
	Test Questions Related to this Chapter 12
2	Basic Concepts of Vector Space Theory of Matter 13
2 2.1	Basic Concepts of Vector Space Theory of Matter 13 The Wave Equation as Probability Function 13
	· · · · · · · · · · · · · · · · · · ·
2.1	The Wave Equation as Probability Function 13
2.1 2.2	The Wave Equation as Probability Function 13 The Postulates of Quantum Mechanics 14
2.1 2.2 2.3	The Wave Equation as Probability Function 13 The Postulates of Quantum Mechanics 14 The Schrödinger Equation 15
2.1 2.2 2.3 2.4	The Wave Equation as Probability Function 13 The Postulates of Quantum Mechanics 14 The Schrödinger Equation 15 Hermicity 18
2.1 2.2 2.3 2.4 2.5	The Wave Equation as Probability Function 13 The Postulates of Quantum Mechanics 14 The Schrödinger Equation 15 Hermicity 18 Exact Measurability and Eigenvalue Problems 19
2.1 2.2 2.3 2.4 2.5 2.6	The Wave Equation as Probability Function 13 The Postulates of Quantum Mechanics 14 The Schrödinger Equation 15 Hermicity 18 Exact Measurability and Eigenvalue Problems 19 Eigenvalue Problem of Hermitian Operators 21
2.1 2.2 2.3 2.4 2.5 2.6 2.7	The Wave Equation as Probability Function 13 The Postulates of Quantum Mechanics 14 The Schrödinger Equation 15 Hermicity 18 Exact Measurability and Eigenvalue Problems 19 Eigenvalue Problem of Hermitian Operators 21 The Eigenvalue Equation of the Hamiltonian 22
2.1 2.2 2.3 2.4 2.5 2.6 2.7	The Wave Equation as Probability Function 13 The Postulates of Quantum Mechanics 14 The Schrödinger Equation 15 Hermicity 18 Exact Measurability and Eigenvalue Problems 19 Eigenvalue Problem of Hermitian Operators 21 The Eigenvalue Equation of the Hamiltonian 22 Eigenvalue Spectrum 23
2.1 2.2 2.3 2.4 2.5 2.6 2.7 2.8	The Wave Equation as Probability Function 13 The Postulates of Quantum Mechanics 14 The Schrödinger Equation 15 Hermicity 18 Exact Measurability and Eigenvalue Problems 19 Eigenvalue Problem of Hermitian Operators 21 The Eigenvalue Equation of the Hamiltonian 22 Eigenvalue Spectrum 23 Test Questions Related to this Chapter 24
2.1 2.2 2.3 2.4 2.5 2.6 2.7 2.8	The Wave Equation as Probability Function 13 The Postulates of Quantum Mechanics 14 The Schrödinger Equation 15 Hermicity 18 Exact Measurability and Eigenvalue Problems 19 Eigenvalue Problem of Hermitian Operators 21 The Eigenvalue Equation of the Hamiltonian 22 Eigenvalue Spectrum 23 Test Questions Related to this Chapter 24 Consequences of Quantum Mechanics 25

The Basics of Theoretical and Computational Chemistry. Edited by B. M. Rode, T. S. Hofer and M. D. Kugler Copyright © 2007 WILEY-VCH Verlag GmbH & Co. KGaA, Weinheim ISBN: 978-3-527-31773-8

Test Questions Related to this Chapter 29

•	Compeni	,
	4	Chemistry and Quantum Mechanics 31
	4.1	Eigenvalue Problem of Angular Momentum and 'Orbital' Concept 31
	4.2	Molecular Orbital and Valence Bond Models 32
	4.3	Spin and the Antisymmetry Principle 35
	4.4	The Virial Theorem 36
	4.5	The Chemical Bond 38
	4.5.1	General Considerations and One-Electron Contributions 38
	4.5.2	Chemical Bonds in n-Electron Systems 42
	4.5.3	Qualitative MO Models for Molecules 44
		Test Questions Related to this Chapter 45
	5	Approximations for Many-Electron Systems 47
	5.1	Non-Relativistic Stationary Systems 47
	5.2	Adiabatic Approximation - The Born-Oppenheimer Approximation 48
	5.3	The Independent Particle Approximation 49
	5.4	Spin Orbitals and Slater Determinants 50
	5.5	Atomic and Molecular Orbitals: The LCAO-MO Approach 52
	5.6	Quantitative Molecular Orbital Calculations 53
	5.6.1	Calculations with Slater Determinants 53
		Overlap Integrals 54
		Integrals of One-Electron Operators 54
		Integrals of Two-Electron Operators 55
	5.6.2	The Hartree–Fock Method 56
	5.6.3	Hartree–Fock Calculations in the LCAO-MO Approach: The Roothaan–Hall Equation 58
	5.7	Canonical and Localised Molecular Orbitals and Chemical Model
		Concepts 64
		Test Questions Related to this Chapter 71
	6	Perturbation Theory in Quantum Chemistry 73
	6.1	Projections and Projectors 73
	6.2	Principles of Perturbation Theory 75
	6.3	The Rayleigh-Schrödinger Perturbation Method 77
	6.4	Applications of Perturbation Theory in Quantum Chemistry 79
		Test Questions Related to this Chapter 80
	7	Group Theory in Theoretical Chemistry 81
	7.1	Definition of a Group 81
	7.2	Symmetry Groups 84
	7.2.1	Symmetry Operators 84
	7.2.2	Symmetry Groups and their Representations 84
	7.2.3	Reducible and Irreducible Representations and Character Tables 86
	7.3	Applications of Group Theory in Quantum Chemistry 93
	7.4	Applications of Group Theory in Spectroscopy 94
	7.4.1	Example 1: Electron Spectroscopy 95

		Contents
7.4.2	Example 2: Infrared/Raman Spectroscopy 96	
	Test Questions Related to this Chapter 100	
8 8.1 8.1.1	Computational Quantum Chemistry Methods 101 Ab Initio Methods 101 Ab Initio Hartree–Fock (HF) Methods 101	
	Ab Initio Correlated Methods 107 Configuration Interaction Methods 108 Multi-Configuration Methods 109	
8.1.2.4	Coupled Cluster Methods 109 Pair Methods 111 Perturbational Methods 111	
8.2 8.3 8.3.1	Semiempirical MO Methods 112 Density Functional Methods 117 Local Density Approximation (LDA) 121	
8.3.2 8.3.3	Generalised Gradient Approximation (GGA) 122 Hybrid Functionals 122	
	Test Questions Related to this Chapter 124	
9 9.1	Force Field Methods and Molecular Modelling 125 Empirical Force Fields 125	
9.2 9.3	Molecular Modelling Programs 126 Docking 127	
9.4 9.4.1	Quantitative Structure–Activity Relationships (QSARs) 129 Multivariate Linear Regression (MLR) 131	
	Nonlinear Regression 132 Alternate Conditional Expectations (ACE) 132	
9.4.2.3		
9.4.3	Example Calculation 134 Test Questions Related to this Chapter 135	
10 10.1	Statistical Simulations: Monte Carlo and Molecular Dynamics Methods Common Features 137	s 137
10.2	Monte Carlo Simulations 142	

Molecular Dynamics Simulations 144

Quantum Mechanical Simulations

10.5.1 Ab initio QM/MM Simulations 163 10.5.2 Car-Parrinello DFT Simulations 165

Evaluation and Visualisation of Simulation Results 151

10.4.3 Specific Evaluations in Macromolecule Simulations 159

Test Questions Related to this Chapter 166

10.3

10.4

10.5

10.4.1 Structure 151 10.4.2 Dynamics 155

11 Synopsis *167*

Appendix 1 *Ab Initio* Hartree–Fock Calculations for Hyposulfuric Acid (H₂SO₃), including Optimisation of the Geometry 169

Appendix 2 Books Recommended for Further Reading 173

Index 175
