# Contents

**Chapter I.** **Tchebycheff Systems on a Closed Interval: Definitions, Examples, and Preliminaries** . . . . . 1

1. Tchebycheff Systems . . . . . 1
2. Extended Tchebycheff and Weak Tchebycheff Systems . . . . . 3
3. Examples . . . . . 9
4. Equivalent Polynomial Formulation of $T$-Systems. 20
5. Polynomials with Prescribed Zeros . . . . 27
6. An Interpolation Problem . . . . . 30

**Chapter II.** **Moment Spaces Induced by $T$-Systems and Their Duals** 37

1. Definition and General Structure of $\mathscr{M}_{n+1}$ . . 38
2. Boundary and Extreme Rays of $\mathscr{M}_{n+1}$ . . 41
3. Interior of $\mathscr{M}_{n+1}$ . . . . . 44
4. An Extremal Characterization of the Canonical Measures . . . . . 49
5. Continuity Properties of the Canonical Representations . . . . . 51
6. An Alternate Approach to the Canonical Measures and the One-Dimensional Sections . . . 54
7. Two-Dimensional Sections . . . . . 57
8. Monotonicity of the Roots of Certain Principal Representations . . . . . 60
9. The Dual Cone $\mathscr{P}_{n+1}$ . . . . . 64
10. Representation Theorems for Positive Polynomials . . . . . 65
11. Extreme Points of $\mathscr{P}_{n+1}$ . . . . . 77

**Chapter III. The Markov-Krein Theorem and Ramifications** . . 79

1. The Extremal Values of $R(c^0)$ . . . . . 80
2. The Markov-Krein Theorem . . . . . 81
3. An Alternate Proof of the Markov-Krein Theorem 83
4. Extensions . . . . . 90
5. Sets of Measures Defined by Moment Inequalities 95
6. Extreme Points of the Set of Distribution Functions with Given Moments . . . . . 101

**Chapter IV. Complements and the Classical Moment Spaces** . 106

1. Classical Criterion for Moment Points . . 106
2. Supporting Hyperplanes and Orthogonal Polynomials . . . . . 108
3. The Maximal Mass $\rho(t_0)$ . . . . . 114
4. Geometry of the Classical Tchebycheff Polynomials . . . . . 118
5. The Simplexes $S^N$ and $B^N$ . . . . . 123
   A. The Simplex $S^N$ . . . . . 123
   B. The Simplex $B^N$ . . . . . 124
6. Volumes of $M^n$ . . . . . 127
7. Symmetries of the Moment Spaces . . . 129
   A. Boundary of $M^n$ . . . . . 129
   B. The Inverse Distribution . . . . 130
   C. Reversal of the Unit Interval . . . 131
   D. Moment Spaces of Symmetric Distributions . 134
8. Mechanical Quadrature and Principal Representations . . . . . 135
9. Spline Functions with Prescribed Zeros . . 140

**Chapter V. Tchebycheff Systems and Moment Spaces on the Interval $[0, \infty)$** . . . . . 144

1. Introduction . . . . . 144
2. A General Spanning Theorem . . . . 144
3. General Structure of $\mathcal{M}_{n+1}$ . . . . 146
4. Canonical Representations, the Maximal Mass $\rho(t_0)$ and the Two-Dimensional Sections . . 152
5. The Markov-Krein Theorem . . . . 156
6. Another Class of Extremal Problems Whose Solutions are Canonical Measures . . . 159

7. Applications of the Canonical Measures to the Approximations of Laplace and Stieltjes Transforms . . . . . 163
8. Representation Theorems for Positive Polynomials . . . . . 168
9. Extreme Points and Boundary of $\mathscr{P}_{n+1}[0, \infty)$ . 171
10. Classical Criterion for Moment Points . . 172
11. Relationship Between $\mathscr{P}_{n+1}$ and $\mathscr{M}_{n+1}$ . . 173
12. Relationship Between $M^n[0, a]$ and $M^n[0, \infty)$ . 176

**Chapter VI. Moment Spaces of Periodic Functions and *T*-Systems on $(-\infty, \infty)$** 179

1. Definitions . . . . . 179
2. Basic Properties of Periodic *T*-Systems . . 180
3. Two-Dimensional Sections . . . . 182
4. The Trigonometric Moment Problem . . 184
5. Examples . . . . . 186
6. Representations for Positive Polynomials and the Extreme Points of $\mathscr{M}_{n+1}$ . . . . . 190
A. Extreme Points and Boundary of $\mathscr{P}_{2m+1}$ . 195
7. Tchebycheff Systems on $(-\infty, \infty)$ . . . 195
8. Representations for Polynomials in $\mathscr{P}_{2m+1}(-\infty, \infty)$ . . . . . 197
9. Two-Dimensional Sections for $\{t^i\}_0^{2m}$ on $(-\infty, \infty)$ 198
10. Two-Dimensional Sections for $\{t^i\}_0^{2m+1}$ on $(-\infty, \infty)$ . . . . . 201
11. Relationship Between $\mathscr{P}_{n+1}$ and $\mathscr{M}_{n+1}$ . . 203

**Chapter VII. Moment Spaces for Tchebycheff Systems Defined on Discrete Sets** . . . . . 204

1. Introduction . . . . . 204
2. The Index of a Set $\Sigma \subset \bar{K}$ . . . . . 207
3. Polynomials with Prescribed Zeros . . . 210
4. Boundary and Canonical Representations of Points in $\mathscr{M}_{n+1}(\bar{K})$ . . . . . 211
5. Principal Representations . . . . 214
6. Interlacing Properties of the Canonical Representations . . . . . 218
7. The Markov-Krein Theorem . . . . 220
8. Complements . . . . . 223

9. Another Class of Extremal Problems Whose Solutions are Canonical Measures . . . 224
10. Applications to the Theory of Interpolation of Absolutely Monotonic Functions . . . 228

**Chapter VIII. Moment Spaces Generated by Restricted Measures** . 233

1. Introduction . . . . . 233
2. Boundary and General Properties of the Moment Space $\Phi_{n+1}$ . . . . . 234
3. Principal Representation of Interior Points . 237
4. An Alternate Approach to the Construction of the Principal Representations . . . . . 240
5. Extending a Tchebycheff System Defined on an Open Interval . . . . . 241
6. Interlacing Properties of Canonical Representations . . . . . 246
7. Two-Dimensional Sections . . . . . 250
8. Tchebycheff Type Inequalities . . . . . 251
9. Sets of Measures Defined by Moment Inequalities 254
10. Extensions . . . . . 258
11. A Minimum Problem . . . . . 260
12. Liapounov Theorem on the Range of a Vector Measure . . . . . 265
13. Extensions of the Liapounov Theorem . . 269
14. Applications of the Liapounov Theorem . . 274

**Chapter IX. Minimax Approximation, The Markoff-Bernstein Inequality, and Related Matters** . . . . 278

1. Polynomials of Best Approximation . . . 279
2. Polynomials of Best Approximation (Continued). 282
3. Proof of Theorem 1.1 . . . . . 284
4. Examples of Theorem 1.1 . . . . . 286
5. Generalized Markoff-Bernstein Inequalities . 292
6. Generalized Markoff-Bernstein Inequalities for Infinite Intervals . . . . . 298
7. Generalized Markoff-Bernstein Inequalities for Periodic Functions . . . . . 300
8. Examples and Applications . . . . . 304
9. Complements . . . . . 311
10. Periodic *ET*-Systems and Extremal Problems for Two Constraints . . . . . 317

**Chapter X.** **Some Problems of Best Interpolating Systems, Maximization of Moment Determinants, and Applications to Optimum Experimental Designs** . . . . 320

1. Introduction . . . . . 320
2. A General Equivalence Theorem . . . 323
3. Maximization of Certain Determinants . . 328
4. Generalizations of the Féjer Problem . . 334
5. Stable and Economical Interpolation Systems . 338
6. Trigonometric Systems . . . . . 342
7. Experimental Designs . . . . . 349
8. Extensions . . . . . 362
9. Open Problems . . . . . 373

**Chapter XI.** **Generalized Convex Functions Induced by *ET*-Systems** 375

1. Preliminaries . . . . . 375
2. Properties of the Cone $C(u_0, u_1, \ldots, u_n)$ . . 381
3. Further Properties of $C(u_0, u_1, \ldots, u_n)$ . . 393
4. Extreme Rays of the Cones . . . . 396
5. Dual Cone of $C(u_0, \ldots, u_n)$ . . . . 404
6. Examples and Applications of the Theory of Dual Cones . . . . . 410
7. Discrete Examples . . . . . 421
8. Generalized Absolutely Monotone Functions . 431
9. Interpolation of Functions by Generalized Spline Polynomials . . . . . 436
   A. Best Mean Square Approximation Properties of Natural Spline Polynomials . . . 443
10. Best Quadrature Formulas Involving Natural Spline Polynomials . . . . . 445
11. Differentiability Properties of Generalized Convex Functions . . . . . 454

**Chapter XII.** **Generalized Tchebycheff Inequalities** . . . 467

1. Introduction . . . . . 467
2. A General Theorem . . . . . 470
3. Examples . . . . . 475
4. Tchebycheff Inequalities for Classes of Unimodal Distributions . . . . . 482
5. Unimodality of Higher Order . . . . 498

**Chapter XIII.** **Multivariate Tchebycheff Inequalities** . . . 505

1. Introduction . . . . . 505

2. Extreme Points of $\mathscr{A}$ . . . . . 508
3. Tchebycheff Inequalities for $\Pr(\max_{1 \le i \le n} |X_i| \ge 1)$ . 512
4. Generalizations of the Berge Inequality . . 517
5. Tchebycheff Inequalities Where $\Omega(x)$ is a Symmetric Characteristic Function . . . . . 519
6. Tchebycheff Inequalities for a Two-Dimensional Rectangle . . . . . 523
7. Inequalities for $\Pr(\max_{1 \le i \le n} X_i \ge 1)$ . . . 525
8. Tchebycheff Inequalities Where $\Omega$ is a Characteristic Function of a Finite Union of Convex Regions 527
9. Bounds Involving the Minimum Component . 531

**Chapter XIV. Tchebycheff Type Inequalities for Sums of Random Variables and Nonlinear Problems** . . . . 533

1. Statement of Theorems . . . . . 533
2. Proofs of Theorems 1.1–1.4 . . . . . 537
3. A Conjecture of Samuels . . . . . 542
4. An Inequality for Sums of Nonindependent Random Variables . . . . . 547
5. Nonlinear Problems . . . . . 549
6. Example I: Maximum and Range of a Sample . 552
7. Example II . . . . . 561

**Bibliography** . . . . . 566

**Author Index** . . . . . 579

**Subject Index** . . . . . 583
