## **CONTENTS**

ANN	OTATION		•
For	EWORD		vii
	1		
	Weierstrass's Theorem		1
1.1.	Approximation of continuous functions by polynomials on a finite		
	closed segment. The fundamental theorem	•••	1
1.2.	The proof of Weierstrass's theorem	•••	2
1.3.	Generalisation and some specific cases. Periodic functions. Func-		4
	tions of several variables	•••	5
1.4.	Mean approximation of integrable functions by polynomials	•••	8
1.5.	Some extensions of Weierstrass's theorem	•••	•
1.6.	Approximation of continuous functions on an infante segment		11
	form approximation by rational fractions	•••	•••
1.7.	Uniform approximation on the whole real axis by integral functions	•••	12
	of a finite order	•••	•-
1.8.	On the weighted uniform approximation of continuous functions on		16
	the whole real axis  On mean approximation of integrable functions on an infinite interval	•••	20
1.9.	Various problems and theorems		24
1.10.	various problems and theorems		
	<b>2</b>		
	The Best Approximation		26
2.1.	The best approximation by polynomials on a finite segment	•••	26
2.2.	Generalisation to a linear normed space and some special cases	•••	28
2.3.	On the uniqueness of the polynomial of the best uniform approxima-		
_,,,,	tion. The theorem of Haar	•••	36
2.4.	On the uniqueness of the polynomial giving the best integral approxi-		
	metion	•••	39
2.5.	The sequence of best approximations. The fundamental characteristic		
	property	•••	41
2.6.	The best approximation on an infinite interval	•••	46
2.7.	Properties of best polynomial approximations. A theorem of P. L.		
	Techehyscheff	•••	54
2.8.	On some properties of the polynomials of best integral approximation	•••	59
2.9.	Polynomials of least deviation from zero	•••	68 75
2.10.	Estimation of the best approximation. De la Vallee Poussin's theorem	•••	13
2.11.	Some cases of exact solution of the problem of the best approxima-		7 <b>7</b>
	tion	•••	11

2.12. 2.13.	On some criteria for the best approximation in an infinite interval Various problems and theorems		84 89
	3		
	Certain Compact Classes of Functions and their		
	Structural Characteristics		97
3.1.	Compact classes of functions of one variable. Criteria of the type of		
	Arzela's theorem. The concept of ε-entropy and ε-capacity of a com-		
	pact set	•••	97
3.2.	Moduli of continuity and some of their properties	•••	100
3.3.	Moduli of smoothness of various orders	•••	106
3.4.	On compact classes of functions of many variables	•••	114
3.5.	Compact classes of differentiable functions	•••	117 129
3.6.	Sets of functions of bounded variations	•••	
3.7.	Some classes of functions analytic on a finite segment	***	132
3.8.	Certain classes of functions analytic on the whole real axis	•••	135 144
3.9.	On regularly monotonic functions	•••	151
3.10.	On quasi-analytic classes of functions	•••	157
3.11.	Conjugate classes of functions defined on the whole real axis	•••	165
3.12.	Various problems and theorems	•••	103
	4		
	Certain Properties of Algebraic Polynomials and Transcende	ental	
	Certain Properties of Algebraic Polynomials and Transcende Integral Functions of Exponential Type	ental	174
4.1.	Integral Functions of Exponential Type	ental 	174 174
<b>4.1. 4.2</b> .	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials	•••	
4.2.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials		174
	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integ-	•••	174
4.2. 4.3.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type	•••	174 178
4.2.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions	•••	174 178
4.2. 4.3. 4.4.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree		174 178 182
4.2. 4.3.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions		174 178 182
4.2. 4.3. 4.4. 4.5.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials	•••	174 178 182 191
4.2. 4.3. 4.4.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental func-	•••	174 178 182 191
4.2. 4.3. 4.4. 4.5. 4.6.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental functions of exponential type. Wiener-Paley's theorem		174 178 182 191 198
4.2. 4.3. 4.4. 4.5.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental functions of exponential type. Wiener-Paley's theorem Certain interpolations and integral identities for the derivative of		174 178 182 191 198
4.2. 4.3. 4.4. 4.5. 4.6.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental functions of exponential type. Wiener-Paley's theorem Certain interpolations and integral identities for the derivative of algebraic polynomials and integral transcendental functions of expo-		174 178 182 191 198
4.2. 4.3. 4.4. 4.5. 4.6. 4.7.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental functions of exponential type. Wiener-Paley's theorem Certain interpolations and integral identities for the derivative of algebraic polynomials and integral transcendental functions of exponential type		174 178 182 191 198 200
4.2. 4.3. 4.4. 4.5. 4.6.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental functions of exponential type. Wiener-Paley's theorem Certain interpolations and integral identities for the derivative of algebraic polynomials and integral transcendental functions of exponential type Certain extremal properties of algebraic polynomials and transcen-		174 178 182 191 198 200
4.2. 4.3. 4.4. 4.5. 4.6. 4.7.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental functions of exponential type. Wiener-Paley's theorem Certain interpolations and integral identities for the derivative of algebraic polynomials and integral transcendental functions of exponential type Certain extremal properties of algebraic polynomials and transcendental integral functions of finite degree		174 178 182 191 198 200
4.2. 4.3. 4.4. 4.5. 4.6. 4.7.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for trigonometric polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental functions of exponential type. Wiener-Paley's theorem Certain interpolations and integral identities for the derivative of algebraic polynomials and integral transcendental functions of exponential type Certain extremal properties of algebraic polynomials and transcendental integral functions of finite degree Integral and interpolation norms of integral functions of finite degree		174 178 182 191 198 200
4.2. 4.3. 4.4. 4.5. 4.6. 4.7.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental functions of exponential type. Wiener-Paley's theorem Certain interpolations and integral identities for the derivative of algebraic polynomials and integral transcendental functions of exponential type Certain extremal properties of algebraic polynomials and transcendental integral functions of finite degree Integral and interpolation norms of integral functions of finite degree in various metrics		174 178 182 191 198 200 205 210
4.2. 4.3. 4.4. 4.5. 4.6. 4.7. 4.8. 4.9.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental functions of exponential type. Wiener-Paley's theorem Certain interpolations and integral identities for the derivative of algebraic polynomials and integral transcendental functions of exponential type Certain extremal properties of algebraic polynomials and transcendental integral functions of finite degree Integral and interpolation norms of integral functions of finite degree in various metrics The relation between trigonometric polynomials and other integral functions of the classes $B_{\sigma}$		174 178 182 191 198 200 205 210
4.2. 4.3. 4.4. 4.5. 4.6. 4.7. 4.8. 4.9.	Integral Functions of Exponential Type  Interpolation formulae for algebraic polynomials Interpolation formulae for certain classes of the transcendental integral functions of exponential type On the interference phenomenon in the behaviour of integral functions of finite degree Certain integral representations for algebraic and trigonometric polynomials An integral representation of certain classes of transcendental functions of exponential type. Wiener-Paley's theorem Certain interpolations and integral identities for the derivative of algebraic polynomials and integral transcendental functions of exponential type Certain extremal properties of algebraic polynomials and transcendental integral functions of finite degree Integral and interpolation norms of integral functions of finite degree in various metrics The relation between trigonometric polynomials and other integral functions of the classes $B_{\sigma}$		174 178 182 191 198 200 205 210 230

4.12.	exponential type Various problems and theorems		243 249
	5		
	Direct Theorems of the Constructive		
	Theory of Functions		257
5.1.	The impact of differential properties of functions on the rapidity of		
	decrease towards zero of their best approximations. The Jackson theorem	•••	257
5.2.	An improved form of the Jackson theorem on the best approximation	•••	-5,
	of continuous functions by algebraic polynomials on a finite segment		264
5.3.	of the real axis  Certain direct theorems for functions of many variables		264 275
5.4.	The rapidity of the decrease to zero of the best approximation of	•••	213
	analytic functions	•••	282
<b>5.</b> 5.	Refinement of Jackson's theorem. The estimates of N. I. Akhiezer,		•
5.6.	M. G. Krein and J. Favard for differentiable periodic functions On the asymptotic behaviour of the upper bounds of best approxima-	•••	289
J.0.	tions of classes of functions, which are differentiable a given finite		
	number of times. S. N. Bernstein's theorem	•••	294
5.7.	The best approximation of functions, which are analytic in a strip	•••	305
5.8.	Constructive properties of certain quasi-analytic classes of functions	•••	310
5.9.	The estimates of best approximations for certain conjugate classes of functions		316
5.10.	Direct theorems in the arbitrary Banach spaces		324
5.11.	Various problems and theorems	•••	326
	6		
	Converse Theorems. Constructive Characteristics of		
	Certain Classes of Functions		333
6.1.	The differential properties of functions with a given sequence of best		
	approximations	•••	333
6.2.	The constructive characteristics of certain classes of continuous		345
6.3.	functions, defined on a finite segment  Converse theorems for functions of many variables	•••	351
6.4.	The differential properties and the best approximations of functions in		
0	various metrics. On inclusion theorems for certain classes of		
	functions	•••	365
6.5.	The analyticity of functions and their best approximations	•••	370
6.6.	The constructive characteristics of the quasi-analytic classes of functions	•••	373
6.7.	Certain converse theorems for the conjugate classes of functions		390
6.8.	Converse theorems and certain constructive characteristics of compact		
	sets in Banach spaces	•••	393
6.9.	Various problems and theorems	•••	398
			хi

	Additional Theorems on the Connection between the Best Approximations of Functions and their Structural Properties		404
	Structural 1 Toperties		707
7.1.	On the precise order of decrease of the best approximations	•••	404
7.2.	The asymptotic properties of the best uniform approximation of certain simple functions with singularities	•••	417
7.3.	The best uniform approximation of functions, possessing a disconti-		420
	nuous derivative of bounded variation  On the best mean approximation of the simplest functions with	•••	432
7.4.	singularities		437
7.5.	On the asymptotic behaviour of the best uniform approximation of		
	certain analytic functions	•••	444
7.6.	A constructive property of regularly monotonic functions	•••	452
7.7.	The asymptotic behaviour of the best uniform approximation by		450
	polynomials of certain integral transcendental functions	•••	456
7.8.	Various problems and theorems	•••	461
	8		
	Linear Processes of Approximation of Functions by Polynon Certain Estimates Connected with them	nials.	466
8.1.	The convergence of linear processes of approximation of functions by		
	polynomials	•••	466
8.2.	The Lebesgue constants and functions	•••	477
8.3.	The linear methods of approximation by polynomials of the best		501
	order of approximation	•••	201
<b>8.4</b> .	The approximation of functions by truncated arithmetic means of the	•••	522
0 5	partial sums of Fourier series  Additional estimates for linear methods of approximation of functions	•••	J44
8.5.	by polynomials		547
<b>8.</b> 6.	The approximative properties of the orthogonal expansions	•••	570
8.7.	Various problems and theorems	•••	576
	9		
	Certain Deductions from the Theory of Functions		
	and Functional Analysis		589
