CHAPTER SEVEN. VARISOLVENT FUNCTIONS

7-1	Introduction	1
7-2	Varisolvent functions	3
7-3	Existence of best approximations	9
7-4	Basic theorems	9
7-5	Approximation on subsets	12
7-6	The limits of a Tchebycheff type theory—characterization	15
7-7	The problem with assumption $\mathcal{A}1$	17
7-8	The problem with assumption $\mathcal{A}2$	22
7-9	The limits of a Tchebycheff type theory—characterization and existence	31
7-10	Areas of difficulty and unsolved problems	38

CHAPTER EIGHT. THE EXPONENTIAL FUNCTION AND RELATED FUNCTIONS

8-1	Introduction	42
8-2	The exponential approximating function	42
8-3	Approximation from a curve of functions	46
8-4	The existence theorems for L_p -approximation	48
8-5	Tchebycheff approximation and varisolvence	56
8-6	Concrete interpretations	63
8-7	Finite point sets and pseudo-approximations	65
8-8	Computation	69

CHAPTER NINE. RATIONAL FUNCTIONS

9-1	Introduction	76
9-2	Existence theorems for the interval $[0, 1]$	77
9-3	Stability and existence for general rational functions	84
9-4	Characterization and uniqueness for general rational functions	89
9-5	Polynomial rational functions	97
9-6	Computation	102
9-7	Computation—the Remes algorithm	105
9-8	Computation—other methods	113

CHAPTER TEN. SPLINE FUNCTIONS

10-1	Introduction	123
10-2	Spline functions and their basic properties	124
10-3	Existence theorems for nonlinear spline approximation	129
10-4	L_2 -approximation by splines	142
10-5	Tchebycheff approximation by splines	145
10-6	Splines and the approximation of linear functionals	154
10-7	Computational methods	159

CHAPTER ELEVEN. GEOMETRIC THEORY OF NONLINEAR
APPROXIMATION

11-1	Introduction	168
11-2	Approximation and projection	169
11-3	Unisolvent and locally unisolvent functions as manifolds	171
11-4	Minkowski geometry	173
11-5	Curvature in Minkowski geometry	190
11-6	Motzkin sets and unique projections	198
11-7	Projections on submanifolds	201
11-8	Non-manifold problems	212
11-9	Projections on objects	217

CHAPTER TWELVE. MULTIVARIATE APPROXIMATION

12-1	Introduction	224
12-2	Least squares and general orthonormal systems	225
12-3	Tensor products	227
12-4	Tchebycheff approximation—nonuniqueness	230
12-5	Tchebycheff approximation—characterization	232
12-6	Conditions for nonuniqueness	236
12-7	Strict approximation	239
12-8	The Polya algorithm	246
12-9	Computation	251
12-10	Orthogonalization	251
12-11	The one for one exchange algorithm	254
12-12	Critical point sets	258

CHAPTER THIRTEEN. BEST APPROXIMATIONS AND INTERPOLATING
FUNCTIONS

13-1	Introduction	260
13-2	Norms and regularity	263
13-3	Varisolvent approximating functions on an interval	267
13-4	Linear interpolating functions on an interval	273
13-5	Varisolvent approximations on a finite point set	278
13-6	Norm classes for finite point sets	279
13-7	Linear approximation and L_p -norms	283

13-8	The Tchebycheff norm	290
13-9	Summary for L_p -norms and linear functions	291
13-10	Juxtapolynomials	293
13-11	The Lawson algorithm	298
