

TABLE OF CONTENTS

Preface to the English Edition	xi
Preface to the German Edition	xiii
Symbols and Notation	xv

Part I: Approximation by Series Expansions and by Interpolation

Chapter I. Representation of complex functions by orthogonal series and Faber series	2
§1. <i>The Hilbert space $L^2(G)$</i>	2
A. Definition of $L^2(G)$	2
B. $L^2(G)$ as a Hilbert space	4
§2. <i>Orthonormal systems of polynomials in $L^2(G)$</i>	6
A. Construction of ON systems; Gramian matrix	6
A ₁ . The Gram-Schmidt orthogonalization process	6
A ₂ . The Gramian matrix	7
A ₃ . A special case: Polynomials in $L^2(G)$	9
B. Zeros of orthogonal polynomials	11
C. Asymptotic representation of the ON polynomials	12
Remark about §2	16
§3. <i>Completeness of the polynomials in $L^2(G)$</i>	16
A. The problem and examples	16
B. Domains with the PA property	17
C. Domains not having the PA property	20
C ₁ . Slit domains	20
C ₂ . Moon-shaped domains	20
Remarks about §3	23
§4. <i>Expansion with respect to ON systems in $L^2(G)$</i>	24
A. ON expansions in Hilbert space	24
B. ON expansions in the space $L^2(G)$	25

C. The quality of the approximation if f is analytic in \overline{G}	26
Remarks about §4	29
§5. <i>The Bergman kernel function</i>	30
A. Introduction and properties of the kernel function	30
B. Series representation of the Bergman kernel function	31
C. Construction of conformal mappings with the Bergman kernel function	32
C ₁ . The connection between K and conformal mapping	33
C ₂ . The Bieberbach polynomials	34
C ₃ . The use of singular functions in the ON process	36
D. Additional applications of the Bergman kernel function	37
D ₁ . Domains with the mean-value property	37
D ₂ . Representation of $\int_{-1}^{+1} f(x)dx$ as an area integral	37
Remark about §5	40
§6. <i>The quality of the approximation; Faber expansions</i>	40
A. Boundary behavior of Cauchy integrals	41
B. Faber polynomials and Faber expansions	42
C. The Faber mapping as a bounded operator	45
C ₁ . Curves of bounded rotation	45
C ₂ . The Faber mapping T	47
D. The quality of approximation inside a curve of bounded rotation	51
D ₁ . Preparations; uniform convergence	51
D ₂ . The modulus of continuity of the Cauchy integral corresponding to h	52
D ₃ . The quality of the approximation	53
E. Report on additional results	55
E ₁ . Additional uniform estimates	55
E ₂ . Local estimates	56
Remarks about §6	57
Chapter II. Approximation by interpolation	58
§1. <i>Hermite's interpolation formula</i>	58
A. The interpolating polynomial	58
B. Special cases of Hermite's formula	59

§2. <i>Interpolation in uniformly distributed points; Fejér points, Fekete points</i>	62
A. Preparations; rough statement about convergence	62
B. General convergence theorem of Kalmár and Walsh	64
C. The system of Fejér points	67
D. The system of Fekete points	70
Remarks about §2	72
§3. <i>Approximation on more general compact sets; Runge's theorem</i>	73
A. Again: Interpolation in Fekete points	73
B. Runge's approximation theorem	76
Remark about §3	78
§4. <i>Interpolation in the unit disk</i>	78
A. Interpolation on $\{z: z = r\}, r < 1$	78
B. Interpolation on $\{z: z = 1\}$	81
C. Approximation by rational functions	86
Remarks about §4	87

Part II: General Approximation Theorems in the Complex Plane

Chapter III. Approximation on compact sets	92
§1. <i>Runge's approximation theorem</i>	92
A. General Cauchy formula	93
B. Runge's theorem	94
C. The pole shifting method	95
§2. <i>Mergelyan's theorem</i>	97
A. Formulation of the result; special cases; consequences	97
B. Preparations for the proof	98
B ₁ . Tietze's extension theorem	99
B ₂ . A representation formula	99
B ₃ . Koebe's $\frac{1}{4}$ -theorem	100
B ₄ . Mergelyan's lemma	101
C. Proof of Mergelyan's theorem	104
Remark about §2	109
§3. <i>Approximation by rational functions</i>	109
A. Swiss cheese	110
A ₁ . Alice Roth's construction	110
A ₂ . Swiss cheese with interior points	112

A ₃ . Swiss cheese with two components	113
A ₄ . Accumulation of holes at the diameter of \mathbb{D}	113
B. Preparations for Bishop's theorem	114
B ₁ . An integral transform	114
B ₂ . Partition of unity	115
C. Bishop's localization theorem and applications	116
C ₁ . The localization theorem	116
C ₂ . Applications of Bishop's theorem	118
D. Vitushkin's theorem; a report	121
Remarks about §3	122
§4. <i>Roth's fusion lemma</i>	122
A. The fusion lemma	123
B. A new proof of Bishop's theorem	127
Remark about §4	129
Chapter IV. Approximation on closed sets	130
§1. <i>Uniform approximation by meromorphic functions</i>	130
A. Statement of the problem	130
B. Roth's approximation theorem	131
C. Special cases of the approximation theorem	133
C ₁ . The one-point compactification G^* of G ; connectedness of $G^* \setminus F$	133
C ₂ . Three sufficient criteria for meromorphic approximation	134
D. Characterization of the sets, where meromorphic approximation is possible	136
§2. <i>Uniform approximation by analytic functions</i>	136
A. Moving the poles of meromorphic functions	137
B. Preliminary topological remarks	138
C. Arakeljan's approximation theorem	139
C ₁ . Approximation of meromorphic functions by analytic functions	140
C ₂ . Arakeljan's theorem	142
Remarks about §2	144
§3. <i>Approximation with given error functions</i>	145
A. The problem; Carleman's theorem	145
A ₁ . Tangential approximation; ϵ -approximation	145
A ₂ . Two lemmas	146
A ₃ . Carleman's theorem	149

B.	The special case where F is nowhere dense	151
B ₁ .	Sufficient conditions for ϵ -approximation	151
B ₂ .	Tangential approximation if $F^\circ = \phi$	155
C.	Nersesjan's theorem	155
C ₁ .	Condition (A); a lemma	155
C ₂ .	Nersesjan's theorem	157
	Remarks about §3	159
§4.	<i>Approximation with certain error functions</i>	160
A.	ϵ -approximation without condition (A)	161
B.	Growth of the approximating function	162
C.	The special case $F = \mathbb{R}$	163
§5.	<i>Some applications of the approximation theorems</i>	164
A.	Radial boundary values of entire functions	164
B.	Boundary behavior of functions analytic in the unit disk	168
B ₁ .	A general approximation theorem	168
B ₂ .	The Dirichlet problem for radial limits	170
C.	Approximation and uniqueness theorems	171
D.	Various further constructions	173
D ₁ .	Prescribed boundary behavior along countably many curves	173
D ₂ .	Analytic functions with prescribed cluster sets	174
D ₃ .	Schneider's noodles	175
D ₄ .	Julia directions of entire functions	175
	Remarks about §5	176
