

TABLE OF CONTENTS

1. INTRODUCTION	1
2. A GENERAL INITIAL VALUE PROBLEM	11
3. EXISTENCE	13
4. CONTINUATION OF SOLUTIONS	16
5. CONTINUOUS DEPENDENCE AND UNIQUENESS	21
6. BACKWARD CONTINUATION	24
7. CARATHEODORY CONDITIONS	30
8. REMARKS ON THE MAP DEFINED BY SOLUTIONS	32
9. AUTONOMOUS SYSTEMS	43
10. DEFINITIONS OF STABILITY	47
11. SUFFICIENT CONDITIONS FOR STABILITY OF GENERAL SYSTEMS	51
12. SUFFICIENT CONDITIONS FOR INSTABILITY	65
13. STABILITY IN AUTONOMOUS SYSTEMS	69
14. AN EXAMPLE OF LEVIN AND NOHEL	72
15. AN EQUATION OF VOLTERRA	78
16. NONHOMOGENEOUS LINEAR SYSTEMS	80
17. THE "ADJOINT" EQUATION AND REPRESENTATION OF SOLUTIONS	88
18. STABILITY OF PERTURBED SYSTEMS	91
19. LINEAR AUTONOMOUS EQUATIONS. THE SEMIGROUP AND INFINITESIMAL GENERATOR	94
20. THE EIGENVALUES OF A LINEAR AUTONOMOUS EQUATION. DECOMPOSITION OF C	98
21. DECOMPOSING C WITH THE ADJOINT EQUATION	104
22. ESTIMATES ON THE COMPLEMENTARY SUBSPACE	112
23. AN EXAMPLE	116
24. THE DECOMPOSITION IN THE VARIATION OF CONSTANTS FORMULA	120
25. FORCED LINEAR SYSTEMS	125
26. THE SADDLE POINT PROPERTY	131
27. A FIXED POINT THEOREM FOR CONES	142
28. A PERIODICITY THEOREM FOR FUNCTIONAL EQUATIONS	152

29.	THE EQUATION $\dot{x}(t) = -\alpha x(t-1)[1+x(t)]$	156
30.	THE EQUATION $\dot{x}(t) = -\alpha x(t-1)[1-x^2(t)]$	162
31.	THE EQUATION $\ddot{x}(t) + f(x(t))\dot{x}(t) + g(x(t-r)) = 0$	164
32.	THE "ADJOINT" EQUATION FOR GENERAL LINEAR SYSTEMS	177
33.	THE TRUE ADJOINT OF A LINEAR SYSTEM	182
34.	BOUNDARY VALUE PROBLEMS	187
35.	LINEAR PERIODIC SYSTEMS. GENERAL THEORY	196
36.	DECOMPOSITION OF LINEAR PERIODIC SYSTEMS	203
37.	NONDEGENERATE PERIODIC ORBITS	213
38.	NOTES AND REMARKS	221
	BIBLIOGRAPHY	227
	INDEX	237
