	Preface	1
1	Introduction	2
2	Planning Experiments and Surveys and the Description of Simple Designs	7
2.1	Basic Ideas	7
2.2	Introduction to the Principles of Planning Experiments	9
2.3	Multiple Measurements, the Principle of Replication	12
2.4	Using Strata or Blocks to Eliminate the Effects of Noise Factors	13
2.4.1	Basic Principles	13
2.4.2	Principles of Blocking and Stratification	15
2.5	Randomisation	18
2.5.1	Randomisation in Surveys - Random Sampling	19
2.5.2	Randomisation in Experimental Designs - Random Allocation	23
2.6	Block Designs	24
2.6.1	Basic Concepts	24
2.6.2	Completely Balanced Incomplete Block Designs	27
2.7	Factorial Designs	29
3	Design and Analysis of Completely Randomised Designs	31
3.1	Point Estimation of Parameters	33
3.1.1	Point Estimation of the Parameters of a Normal Distribution	37
3.1.2	Point Estimation of the Parameter p of a Binomial Distribution	39
3.1.3	Point Estimation in Surveys	40
3.2	Interval Estimation	45
3.2.1	Confidence Intervals for the Parameters of a Distribution	45
3.2.1.1	Confidence Intervals for the Expectation of the Normal Distribution	46
3.2.1.2	Confidence Intervals for the Expectation of the Normal Distribution in the Presence of a Noise Factor	52
3.2.1.3	Confidence Intervals for the Mean and Total from a Survey	54
3.2.1.4	Confidence Intervals for the Variance of the Normal Distribution	55
3.2.1.5	Confidence Intervals for Probabilities	57
3.2.2	Confidence Intervals for the Difference between the Means of Two Normal Distributions	60
3.2.2.1	The Difference between the Means of Normal Distributions – Paired Observations	61
3.2.2.2	The Difference between the Means of Normal Distributions - Two Independent Samples	63
3.3	Selection Procedures	66
3.4	Hypothesis Testing	71
3.4.1	Testing Hypotheses about the Mean of a Normal Distribution	75
3.4.2	Testing Hypotheses Concerning the Difference between the Means of Two Normal Distributions	79
3.4.2.1	Paired Observations	79
3.4.2.2	Independent Samples	80
3.4.3	Comparison of the Variances of Two Normal Distributions	87
3.4.4	Comparison between two Proportions using Independent Samples	90
3.4.5	Equivalence Tests	97

4	Analysis of Variance	99
4.1	One-way Analysis of Variance	99
4.1.1	One-way Analysis of Variance - Model I	100
4.1.2	One-way Analysis of Variance - Model II	106
4.2	Two-way Analysis of Variance	108
4.2.1	Two-way Analysis of Variance - Cross-classification	108
4.2.1.1	Two-way Analysis of Variance - Cross-classification - Model I	110
4.2.1.2	Two-way Analysis of Variance - Cross-classification - Model II	114
4.2.1.3	Two-way Analysis of Variance - Cross-classification - Mixed Model	118
4.2.1.4	Two-way Analysis of Variance - Cross-classification - Block Designs	122
4.2.2	Two-way Analysis of Variance - Nested Classification	126
4.2.2.1	Two-way Analysis of Variance - Nested Classification - Model I	128
4.2.2.2	Two-way Analysis of Variance - Nested Classification - Model II	131
4.2.2.3	Two-way Analysis of Variance - Nested Classification - Mixed Model, <i>A</i> Fixed and <i>B</i> Random	134
4.2.2.4	Two-way Analysis of Variance - Nested Classification - Mixed Model, <i>B</i> Fixed and <i>A</i> Random	135
4.2.3	Notes on the Procedure for Higher Classifications	136
4.3	Multiple Comparisons of Means	137
4.3.1	Pairwise Comparisons between the Means of <i>k</i> Populations	139
4.3.1.1	The Multiple <i>t</i> -Test	139
4.3.1.2	The Tukey Test	143
4.3.2	Multiple Comparisons with a Standard Population	144
4.3.2.1	The Multiple <i>t</i> -Test	144
4.3.2.2	The Dunnett Test	145
4.3.3	Overview of Minimal Sample Sizes	147
5	Regression Analysis	149
5.1	Scatter-plots	150
5.2	Model I and Model II in Regression Analysis	152
5.3	Parameter Estimation by the Method of Least Squares	155
5.4	Simple Linear Regression	160
5.4.1	Confidence Intervals	160
5.4.2	Optimal Designs in Model I	166
5.4.3	Hypothesis Testing	169
5.4.4	Special Problems in Model II	173
5.5	Multiple Linear Regression	176
5.5.1	Parameter Estimation	177
5.5.2	Confidence Intervals and Tests	182
5.5.3	Special Problems in Model II	183
5.5.4	Optimal Designs in Model I	186
5.6	Simple Polynomial Regression	186
5.7	Multiple Quadratic Regression	189
5.8	Intrinsically Non-linear Regression	197
6	Theoretical Assumptions and their Practical importance – the Robustness of Procedures	203

Appendix A	Symbols	206
Appendix B	Fundamentals in Statistics - Overview	209
B.1	Descriptive Statistics	209
B.1.1	Population	209
B.1.2	Population Mean and Variance	209
B.1.3	Graphical Description	211
B.1.4	A Rule of Thumb	213
B.2	Frequencies and Probabilities	213
B.2.1	Introduction	213
B.2.2	Combining Frequencies and Probabilities	214
B.2.2.1	Properties of Relative Frequencies	214
B.2.2.2	Probabilities	217
B.2.3	Probability Distributions	218
B.2.3.1	Definitions	218
B.2.3.2	Quantiles	224
B.2.4	Expectation	227
B.2.5	Variance	229
B.2.6	Covariance	231
B.3	Sampling Distributions	233
B.3.1	Sample Mean \bar{x}	233
B.3.2	Sample Variance s^2	236
Appendix C	Matrices	238
Tables		243
Table A1	P -Quantiles of the t -Distribution with f Degrees of Freedom (for $f = \infty$, P -Quantiles of the Standard Normal Distribution)	243
Table A2	P -Quantiles $\chi^2(f, p)$ of the χ^2 -Distribution	244
Table A3	95%-Quantiles of the F -Distribution	246
Table A4	95%-Quantiles of the Studentised Range Distribution	248
Table A5	95%-Quantiles for the Two-sided Dunnett Test in an Optimal Design	250
Table A6	95%-Quantiles for the Two-sided Dunnett Test in a Balanced Design	252
