

CONTENTS

Preface	ix
Introduction: Basic Thesis	xi
I.1 Elements of the Approach	xi
I.2 Basic Concepts	xiv
I.3 Nonuniform Stress States: Characteristic Material Dimensions	xvii
I.4 Strength Evolution	xvii
I.5 Outline of the Methodology	xx
I.6 Virtual Design	xxiii
References	xxiv
1 Physical Behavior	1
1.1 Continuous-Fiber Composite Materials	1
1.2 Damage Tolerance and Durability	15
1.3 Damage Modes and Failure Modes	25
1.4 Summary of Concepts	43
References	47
2 Engineering Concepts of Strength	50
2.1 Factors That Determine Composite Material Strength	50
2.2 Strength under Multiaxial Loading	62

2.3	Failure Functions for Damage Accumulation	74
	References	76
	Exercises	78
3	Strength Evolution	80
3.1	Nature of the Problem	80
3.2	Progressive Failure	84
3.3	Failure Modes	93
3.4	Remaining Strength under Long-Term Loading	94
3.5	Features of Strength Evolution Integral	101
3.6	Summary of Approach	106
	References	108
	Exercises	109
4	Micromechanical Models of Composite Stiffness and Strength	112
4.1	Axial Tensile Strength of Unidirectional Composites	113
4.2	Compression Strength	140
4.3	Transverse Strength and Shear Strength	155
	References	165
	Exercises	167
5	Stiffness Evolution	171
5.1	Problem Definition	171
5.2	Stiffness Change Due to Matrix Cracking	172
5.3	Time-Dependent Stiffness Change	194
5.4	Temperature-Dependent Stiffness Change	215
5.5	Summary	223
	References	223
	Exercises	229
6	Strength Evolution During Damage Accumulation	232
6.1	Problem Definition	232
6.2	Factors That Influence Strength	235
6.3	Models of Strength Evolution	246
6.4	Application Example	272
	References	274
	Exercises	277

7 Nonuniform Stress States	281
7.1 Problem Definition	281
7.2 Laminate Edge-Related Stresses	282
7.3 Undamaged Notched Strength	296
7.4 Notched Strength After Damage	310
7.5 Fracture Mechanics and Energy Methods	321
References	362
Exercises	367
8 Example Applications and Case Studies	370
8.1 Example: Unnotched Failure of Polymer Composite	370
8.2 Case Study 1: Fatigue Behavior of APC-2 Laminates	377
8.3 Case Study 2: Elevated-Temperature Fatigue Behavior of Graphite Fiber-PPS Laminates	384
8.4 Case Study 3: Elevated-Temperature Fatigue Behavior of Nextel 610/Alumina-Yttria Composites	388
8.5 Case Study 4: Elevated-Temperature Fatigue Behavior of Nicalon-Enhanced SiC Composites	391
8.6 Case Study 5: Fatigue Failure of a Structural Composite Shape	400
8.7 Summary	406
References	406
Appendix to Chapter 1	409
Index	415
