

Contents

Preface	vii
1 Smooth Manifolds	1
Topological Manifolds	3
Topological Properties of Manifolds	8
Smooth Structures	11
Examples of Smooth Manifolds	17
Manifolds with Boundary	24
Problems	28
2 Smooth Maps	30
Smooth Functions and Smooth Maps	31
Lie Groups	37
Smooth Covering Maps	40
Proper Maps	45
Partitions of Unity	49
Problems	57
3 Tangent Vectors	60
Tangent Vectors	61
Pushforwards	65
Computations in Coordinates	69
Tangent Vectors to Curves	75
Alternative Definitions of the Tangent Space	77
Problems	78

4	Vector Fields	80
	The Tangent Bundle	81
	Vector Fields on Manifolds	82
	Lie Brackets	89
	The Lie Algebra of a Lie Group	93
	Problems	100
5	Vector Bundles	103
	Vector Bundles	103
	Local and Global Sections of Vector Bundles	109
	Bundle Maps	115
	Categories and Functors	118
	Problems	121
6	The Cotangent Bundle	124
	Covectors	125
	Tangent Covectors on Manifolds	127
	The Cotangent Bundle	129
	The Differential of a Function	132
	Pullbacks	136
	Line Integrals	138
	Conservative Covector Fields	143
	Problems	151
7	Submersions, Immersions, and Embeddings	155
	Maps of Constant Rank	156
	The Inverse Function Theorem and Its Friends	159
	Constant-Rank Maps Between Manifolds	166
	Submersions	169
	Problems	171
8	Submanifolds	173
	Embedded Submanifolds	174
	Level Sets	180
	Immersed Submanifolds	186
	Restricting Maps to Submanifolds	190
	Vector Fields and Covector Fields on Submanifolds	191
	Lie Subgroups	194
	Vector Subbundles	199
	Problems	201
9	Lie Group Actions	206
	Group Actions	207
	Equivariant Maps	212

Proper Actions	216
Quotients of Manifolds by Group Actions	218
Covering Manifolds	223
Homogeneous Spaces	228
Applications	231
Problems	236
10 Embedding and Approximation Theorems	241
Sets of Measure Zero in Manifolds	242
The Whitney Embedding Theorem	246
The Whitney Approximation Theorems	252
Problems	258
11 Tensors	260
The Algebra of Tensors	261
Tensors and Tensor Fields on Manifolds	268
Symmetric Tensors	271
Riemannian Metrics	273
Problems	285
12 Differential Forms	291
The Geometry of Volume Measurement	292
The Algebra of Alternating Tensors	294
The Wedge Product	299
Differential Forms on Manifolds	302
Exterior Derivatives	305
Symplectic Forms	314
Problems	319
13 Orientations	324
Orientations of Vector Spaces	325
Orientations of Manifolds	327
The Orientation Covering	329
Orientations of Hypersurfaces	334
Boundary Orientations	338
The Riemannian Volume Form	342
Hypersurfaces in Riemannian Manifolds	344
Problems	346
14 Integration on Manifolds	349
Integration of Differential Forms on Euclidean Space	350
Integration on Manifolds	353
Stokes's Theorem	359
Manifolds with Corners	363
Integration on Riemannian Manifolds	370

Integration on Lie Groups	374
Densities	375
Problems	382
15 De Rham Cohomology	388
The de Rham Cohomology Groups	389
Homotopy Invariance	390
The Mayer–Vietoris Theorem	394
Computations	399
Problems	407
16 The de Rham Theorem	410
Singular Homology	411
Singular Cohomology	415
Smooth Singular Homology	416
The de Rham Theorem	424
Problems	431
17 Integral Curves and Flows	434
Integral Curves	435
Global Flows	438
The Fundamental Theorem on Flows	440
Complete Vector Fields	446
Regular Points and Singular Points	447
Time-Dependent Vector Fields	451
Proof of the ODE Theorem	452
Problems	460
18 Lie Derivatives	464
The Lie Derivative	465
Commuting Vector Fields	468
Lie Derivatives of Tensor Fields	473
Applications to Geometry	477
Applications to Symplectic Manifolds	481
Problems	491
19 Integral Manifolds and Foliations	494
Tangent Distributions	495
Involutivity and Differential Forms	497
The Frobenius Theorem	500
Applications to Partial Differential Equations	505
Foliations	510
Problems	515

20 Lie Groups and Their Lie Algebras	518
One-Parameter Subgroups	519
The Exponential Map	522
The Closed Subgroup Theorem	526
The Adjoint Representation	529
Lie Subalgebras and Lie Subgroups	530
Normal Subgroups	535
The Fundamental Correspondence	536
Problems	537
Appendix: Review of Prerequisites	540
Topology	540
Linear Algebra	558
Calculus	581
References	597
Index	601
