

Contents

§1.	Introduction.	1
 <u>Part I. The symplectic approach.</u>		
§2.	The moment map.	21
§3.	Critical points for the square of the moment map.	35
§4.	The square of the moment map as a Morse function.	44
§5.	Cohomological formulae.	62
§6.	Complex group actions on Kähler manifolds.	79
§7.	Quotients of Kähler manifolds.	95
§8.	The relationship with geometric invariant theory.	102
§9.	Some remarks on non-compact manifolds.	115
§10.	Appendix. Morse theory extended to minimally degenerate functions.	121
 <u>Part II. The algebraic approach.</u>		
§11.	The basic idea.	138
§12.	Stratifications over arbitrary algebraically closed fields.	143
§13.	The strata of a nonsingular variety.	159
§14.	Hodge numbers.	167
§15.	Calculating cohomology by counting points.	176
§16.	Examples.	189
