Preface	xi
I TOPOLOGY	1
1 Noncommutative Topology: Spaces	3
1.1 Continuous functions on a locally compact space	4
1.2 Characters and the Gelfand transformation	5
1.3 Trading spaces for algebras	9
1.4 Homotopy in noncommutative language	16
1.5 Exponentials and cohomology	17
1.6 Identifications and attachments	21
1.A C^* -algebra basics	26
1.B Hopf algebras and Tannaka–Kreĭn duality	34
2 Noncommutative Topology: Vector Bundles	49
2.1 Vector bundles	49
2.2 The functor Γ	56
2.3 The Serre–Swan theorem	59
2.4 Trading bundles for modules	60
2.5 C^* -modules	64
2.6 Line bundles and the Bott projector	74
2.A Projective modules over unital rings	79

3	Some Aspects of K-theory	83
3.1	Endomorphisms of C^* -modules	83
3.2	The K_0 group	92
3.3	The importance of being halfexact	103
3.4	Asymptotic morphisms	110
3.5	The Moyal asymptotic morphism	113
3.6	Bott periodicity and the hexagon	120
3.7	The K_1 functor	127
3.8	K -theory of pre- C^* -algebras	133
4	Fredholm Operators on C^*-modules	141
4.1	Fredholm operators and the Atiyah-Jänich theorem	141
4.2	Fredholm operators on C^* -modules	145
4.3	The generalized Fredholm index	148
4.4	The noncommutative Atiyah-Jänich theorem	156
4.5	Morita equivalence of C^* -algebras	159
II	CALCULUS AND LINEAR ALGEBRA	169
5	Finite-dimensional Clifford Algebras and Spinors	171
5.1	The eightfold way	171
5.2	Spin groups	180
5.3	Fock-space representations	184
5.4	The exterior algebra viewpoint	195
5.5	Pfaffians and Gaussians	204
5.A	Superalgebras	210
6	The Spin Representation	213
6.1	Infinite-dimensional Clifford algebras	213
6.2	The infinitesimal spin representation revisited	218
6.3	The Shale-Stinespring theorem	224
6.4	Charged fields	238
7	The Noncommutative Integral	251
7.1	A rapid course in Riemannian geometry	251
7.2	Laplacians	258
7.3	The Wodzicki residue	264
7.4	Spectral functions	272
7.5	The Dixmier trace	284
7.6	Connes' trace theorem	293
7.A	Pseudodifferential operators	298
7.B	Homogeneous distributions	306
7.C	Ideals of compact operators	310

8	Noncommutative Differential Calculi	319
8.1	Universal forms	320
8.2	Cycles and Fredholm modules	326
8.3	Connections and the Chern homomorphism	335
8.4	Hochschild homology and cohomology	343
8.5	The Hochschild-Kostant-Rosenberg-Connes theorem	355
III	GEOMETRY	367
9	Commutative Geometries	369
9.1	Clifford modules	370
9.2	Spin ^c structures: the algebraic way	372
9.3	Spin connections and Dirac operators	382
9.4	Analytical aspects of Dirac operators	391
9.5	KR-cycles and the eightfold way	399
9.A	Spin geometry of the Riemann sphere	407
9.B	The Hodge-Dirac operator	423
10	Spectral Triples	429
10.1	Cyclic cohomology	429
10.2	Chern characters and entire cyclic cocycles	446
10.3	Tameness and regularity of spectral triples	460
10.4	Connes' character formula	470
10.5	Terms and conditions for spin geometries	481
11	Connes' Spin Manifold Theorem	487
11.1	Commutative spin geometries revisited	487
11.2	The construction of the volume form	491
11.3	The spin structure and the metric	500
11.4	The Dirac operator and the action functional	506
11.A	The Riemann sphere as a spectral manifold	513
IV	TRENDS	517
12	Tori	519
12.1	Crossed products	522
12.2	Structure of NC tori and the Moyal approach	526
12.3	Spin geometries on noncommutative tori	539
12.4	Morita equivalence and crossed products	549
13	Quantum Theory	557
13.1	The Dirac equation and the neutrino paradigm	558
13.2	Propagators	564
13.3	The classical Dyson expansion in QED	570

13.4	The Rules	575
13.5	The quantum Dyson expansion	584
13.A	On quantum field theory on noncommutative manifolds	592
14	Kreimer-Connes-Moscovici Algebras	597
14.1	The Connes-Kreimer algebra of rooted trees	598
14.2	The Grossman-Larson algebra of rooted trees	613
14.3	The Milnor-Moore theorem	618
14.4	Duality in Hopf algebras	622
14.5	Hopf algebras of Feynman diagrams	627
14.6	Hopf algebras and diffeomorphism groups	630
14.7	Cyclic cohomology of Hopf algebras	635
	References	641
	Symbol Index	667
	Subject Index	673
