<i>Preface</i>	ix
1 Riemann-Hilbert Problems	1
1.1 What Is a Riemann-Hilbert Problem?	1
1.2 Examples	4
2 Jacobi Operators	15
2.1 Jacobi Matrices	15
2.2 The Spectrum of Jacobi Matrices	25
2.3 The Toda Flow	27
2.4 Unbounded Jacobi Operators	29
2.5 Appendix: Support of a Measure	38
3 Orthogonal Polynomials	39
3.1 Construction of Orthogonal Polynomials	39
3.2 A Riemann-Hilbert Problem	45
3.3 Some Symmetry Considerations	52
3.4 Zeros of Orthogonal Polynomials	55
4 Continued Fractions	61
4.1 Continued Fraction Expansion of a Number	61
4.2 Measure Theory and Ergodic Theory	69
4.3 Application to Jacobi Operators	80
4.4 Remarks on the Continued Fraction Expansion of a Number	90
5 Random Matrix Theory	93
5.1 Introduction	93
5.2 Unitary Ensembles	95
5.3 Spectral Variables for Hermitian Matrices	98
5.4 Distribution of Eigenvalues	106
5.5 Distribution of Spacings of Eigenvalues	117
5.6 Further Remarks on the Nearest-Neighbor Spacing Distribution and Universality	125

6 Equilibrium Measures 133

6.1	Scaling	133
6.2	Existence of the Equilibrium Measure μ^V	139
6.3	Convergence of λ_{x^*}	150
6.4	Convergence of $\frac{1}{n}\mathcal{R}_1(x_1)dx_1$	155
6.5	Convergence of η_{x^*}	165
6.6	Variational Problem for the Equilibrium Measure	174
6.7	Equilibrium Measure for $V(x) = tx^{2m}$	176
6.8	Appendix: The Transfinite Diameter and Fekete Sets	187

7 Asymptotics for Orthogonal Polynomials 189

7.1	Riemann-Hilbert Problem: The Precise Sense	189
7.2	Riemann-Hilbert Problem for Orthogonal Polynomials	198
7.3	Deformation of a Riemann-Hilbert Problem	200
7.4	Asymptotics of Orthogonal Polynomials	211
7.5	Some Analytic Considerations of Riemann-Hilbert Problems	218
7.6	Construction of the Parametrix	223
7.7	Asymptotics of Orthogonal Polynomials on the Real Axis	242

8 Universality 249

8.1	Universality	249
8.2	Asymptotics of P_s	264

<i>Bibliography</i>	271
