

# CONTENTS

## CHAPTER I

### EXISTENCE OF SOLUTIONS

PAGE

- |  |   |
|--|---|
| 1. Some problems for investigation     | 1 |
| 2. Simple ideas about solutions        | 2 |
| 3. Existence of a solution             | 4 |
| 4. Extensions of the existence theorem | 8 |

## CHAPTER II

### THE LINEAR EQUATION

- |  |    |
|--|----|
| 5. Existence theorem                     | 12 |
| 6. The linear equation                   | 13 |
| 7. Independent solutions                 | 13 |
| 8. Solution of non-homogeneous equations | 17 |
| 9. Second-order linear equations         | 18 |
| 10. Adjoint equations                    | 20 |

## CHAPTER III

### OSCILLATION THEOREMS

- |                                   |    |
|-----------------------------------|----|
| 11. Convexity of solutions        | 25 |
| 12. Zeros of solutions            | 27 |
| 13. Eigenvalues                   | 29 |
| 14. Eigenfunctions and expansions | 31 |

## CHAPTER IV

### SOLUTION IN SERIES

- |   |    |
|---|----|
| 15. Differential equations in complex variables | 33 |
| 16. Ordinary and singular points                | 34 |

17. Solutions near a regular singularity	36
18. Convergence of the power series	38
19. The second solution when exponents are equal or differ by an integer	39
20. The method of Frobenius	40
21. The point at infinity	42
22. Bessel's equation	42

## CHAPTER V

## SINGULARITIES OF EQUATIONS

23. Solutions near a singularity	47
24. Regular and irregular singularities	49
25. Equations with assigned singularities	51
26. The hypergeometric equation	52
27. The hypergeometric function	53
28. Expression of $F(a, b; c; z)$ as an integral	54
29. Formulae connecting hypergeometric functions	55
30. Confluence of singularities	57

## CHAPTER VI

## CONTOUR INTEGRAL SOLUTIONS

31. Solutions expressed as integrals	59
32. Laplace's linear equation	59
33. Choice of contours	62
34. Further examples of contours	63
35. Integrals containing a power of $\zeta - z$	65

## CHAPTER VII

## LEGENDRE FUNCTIONS

36. Genesis of Legendre's equation	70
37. Legendre polynomials	71
38. Integrals for $P_n(z)$	72
39. The generating function. Recurrence relations	73
40. The function $P_\nu(z)$ for general $\nu$	74
