

Contents

	Preface	vii
1	Introduction; Differential Equations of First Order	1
	1.1 <i>Introduction, 1</i>	
	1.2 <i>Some Elementary Facts about Differential Equations, 4</i>	
	1.3 <i>The Linear Equation—The Initial-Value Problem, 12</i>	
	1.4 <i>More on Linear Equations—The General Solution, 19</i>	
	1.5 <i>Nonlinear Equations—Separation of Variables, 23</i>	
	1.6 <i>Exact Nonlinear Differential Equations, 31</i>	
	1.7 <i>Some Special Techniques—A Historical Note, 40</i>	
	1.8 <i>Numerical Solutions—An Introduction, 45</i>	
2	Linear Equations of Order Two and Higher	56
	2.1 <i>Introductory Remarks, 56</i>	
	2.2 <i>The Euclidean Plane and Solution Spaces, 62</i>	

- 2.3 *The Solution Space for $y'' + a_1y' + a_0y = 0$, 69*
- 2.4 *The Nonhomogeneous Equation of Order Two, 79*
- 2.5 *The Homogeneous Equation with Constant Coefficients, 85*
- 2.6 *Constant Coefficient Equations of Higher Order, 91*
- 2.7 *The Nonhomogeneous Equation with Constant Coefficients, 97*
- 2.8 *Some Applications, 103*
- 2.9 *Solving the Second Order Equation Numerically, 117*
- *2.10 *Vector Spaces and Related Ideas, 124*

3 More on Numerical Techniques 134

- 3.1 *Introduction, 134*
- 3.2 *Introduction to Single-Step Procedures, 139*
- 3.3 *Runge-Kutta Schemes of Higher Order, 145*
- *3.4 *Predictor-Corrector Methods, 151*
- 3.5 *Differential Equations of Higher Order and Systems, 156*

4 Introduction to Power Series Methods 164

- 4.1 *Introduction, 164*
- 4.2 *Second Order Linear Equations—Examples, 172*
- 4.3 *Some General Results—Ordinary Points, 178*
- 4.4 *Singular Problems—Euler Equations, 183*
- 4.5 *Solutions Near a Regular Singular Point, 189*
- 4.6 *Bessel's Equation, 196*
- *4.7 *Some Computational Considerations, 204*

5 Elements of the Laplace Transform 211

- 5.1 *Introduction, 211*
- 5.2 *Definitions and Examples, 213*
- 5.3 *Some Key Properties, 220*
- 5.4 *The Laplace Transform and Differential Equations, 229*
- 5.5 *The Convolution Theorem—Green's Functions, 235*
- *5.6 *Application to Other Types of Problems, 243*
- *5.7 *Unit Impulses—the Delta Function, 250*

6	Linear Systems	260
6.1	<i>Introduction, 260</i>	
6.2	<i>Some Facts from Linear Algebra, 265</i>	
6.3	<i>The General Homogeneous System, 277</i>	
6.4	<i>The General Nonhomogeneous Equation, 285</i>	
6.5	<i>The Homogeneous Equation with Constant Coefficients, 293</i>	
6.6	<i>When the Eigenvectors Are Deficient, 302</i>	
	Appendix—	
	The Existence and Uniqueness Theorems	314
	Answers to Problems	325
	Index	339
