PREFACE

v

Chapter 1. Sturm-Type Theorems for Second Order Ordinary Equations

1. Comparison Theorems for Self-Adjoint Equations	1
2. Additional Results of Leighton	8
3. Extension to General Second Order Equations	10
4. Comparison Theorems for Singular Equations	16
5. Comparison Theorems for Eigenfunctions	20
6. Reid's Comparison Theorems on Focal Points	29
7. Levin's Comparison Theorems	33
8. The Order of Zeros	38

Chapter 2. Oscillation and Nonoscillation Theorems for Second Order Ordinary Equations

1. The Oscillation Criteria of Hille and Nehari	44
2. Conditionally Oscillatory Equations	52
3. Nehari's Comparison Theorems	56
4. The Hille-Wintner Comparison Theorem	60
5. Hille's Necessary and Sufficient Conditions for Nonoscillatory Equations	68
6. Leighton's Oscillation Criteria	70
7. Potter's Oscillation Criteria	76
8. Hille's Kneser-Type Oscillation Criteria	85
9. Nonoscillation Theorems of Hartman and Wintner	88
10. Asymptotic Estimates for the Number of Zeros of a Solution of (1.1) or (2.1)	95
11. Nonoscillation Criteria for Hill's Equation	104
12. Nonoscillation Criteria for Complex Equations	109

vii

Chapter 3. Fourth Order Ordinary Equations

1. Introduction	113
2. Separation Theorems	114
3. Comparison Theorems for (3.2) and (3.3)	122
4. Comparison Theorems for Other Fourth Order Equations	127
5. Comparison Theorems for Eigenfunctions	132
6. Nonoscillation Theorems	135
7. Leighton and Nehari's Sufficient Conditions for Nonoscillatory Equations	140
8. Comparison Theorems for Nonoscillation	142
9. Howard's Comparison Theorems for Eigenvalue Problems	145

Chapter 4. Third Order Ordinary Equations, n th Order Ordinary Equations and Systems

1. Introduction	149
2. Separation Theorems for Third Order Equations	150
3. Comparison Theorems for Third Order Equations	156
4. Oscillation Criteria for Third Order Equations	160
5. Separation and Comparison Theorems for n th Order Equations	165
6. General Oscillation Theorems	168
7. Nonoscillation Theorems for Systems of Differential Equations	177
8. Whyburn's Second Order System	183

Chapter 5. Partial Differential Equations

1. Introduction	186
2. Comparison Theorems for Self-Adjoint Equations in Bounded Domains	187
3. Comparison Theorems for General Second Order Elliptic Equations	191
4. Comparison Theorems on Unbounded Domains	194
5. Extension to Complex-Valued Solutions and Subsolutions	198
6. Lower Bounds for Eigenvalues	203
7. Oscillation Theorems	205
8. Comparison Theorems for Eigenfunctions	208
