

Contents

Chapter 1. Theorems of Weierstrass	1
§ 1. Basic Notions	1
§ 2. Approximation by Integral Operators	4
§ 3. The Theorem of Korovkin	8
§ 4. Theorems of Stone-Weierstrass	11
§ 5. Problems	14
§ 6. Notes	15
Chapter 2. Spaces of Functions	16
§ 1. Introduction. The Spaces C and L_p	16
§ 2. Rearrangement-Invariant Function Spaces	21
§ 3. Hardy's Inequalities and the (θ, q) -quasi-norms	24
§ 4. Linear Operators. Interpolation of Operators	28
§ 5. Spaces of Differentiable Functions: Sobolev Spaces	35
§ 6. Moduli of Continuity	40
§ 7. Moduli of Smoothness	44
§ 8. Marchaud Inequalities	46
§ 9. Lipschitz Spaces	51
§ 10. Besov Spaces	54
§ 11. Problems and Notes	57
Chapter 3. Best Approximation	58
§ 1. Introduction: Existence of Best Approximation	58
§ 2. Kolmogorov's Theorem	63
§ 3. Haar Systems	67
§ 4. Uniqueness of Best Approximation in $C(A)$	71
§ 5. Chebyshev's Theorem	73
§ 6. Chebyshev Polynomials	75
§ 7. Strong Unicity	77
§ 8. Remez Algorithms	78
§ 9. Krein's Theorem	80
§ 10. Best Approximation in L_p , $1 \leq p < \infty$	82
§ 11. Pólya and Descartes Systems	88
§ 12. Weak Haar Systems	91

§ 13. Problems	95
§ 14. Notes	95
Chapter 4. Properties of Polynomials	97
§ 1. Inequalities of Bernstein, Szegő and Markov	97
§ 2. Polynomials on the Complex Plane and in Banach Spaces	99
§ 3. Bernstein Inequalities in L_p , $0 < p < 1$	104
§ 4. Polynomials with Positive Coefficients in x , $1 - x$	109
§ 5. Lagrange Interpolation	114
§ 6. Hermite Interpolation	117
§ 7. Divided Differences	120
§ 8. Quadrature Formulas	123
§ 9. Birkhoff Interpolation	124
§ 10. Regularity of Birkhoff Matrices	127
§ 11. Problems	131
§ 12. Notes	131
Chapter 5. Splines	134
§ 1. Definitions and Simple Properties	134
§ 2. B-Splines	137
§ 3. B-Spline Series	140
§ 4. Quasi-Interpolant Operators	144
§ 5. Euler and Bernoulli Splines	148
§ 6. Definition of Splines by Their Extremal Properties	151
§ 7. The Kolmogorov-Landau Inequalities	153
§ 8. Zero Count for Splines	157
§ 9. Spline Interpolation	161
§ 10. Sign Variation of Splines	162
§ 11. Total Positivity of the B-Spline Collocation Matrix	165
§ 12. Problems	166
§ 13. Notes	167
Chapter 6. K -Functionals and Interpolation Spaces	170
§ 1. K -Functionals	170
§ 2. K -Functionals and Moduli of Smoothness	175
§ 3. Comparisons of Moduli of Smoothness	178
§ 4. Two Theorems of Whitney	182
§ 5. Averaged Moduli of Smoothness	184
§ 6. Moduli of Smoothness with Weights	186
§ 7. The θ, q -Interpolation Spaces	191
§ 8. Problems	199
§ 9. Notes	200

Chapter 7. Central Theorems of Approximation	201
§ 1. Introduction	201
§ 2. Trigonometric Approximation	202
§ 3. Inverse Theorems of Trigonometric Approximation	208
§ 4. Favard's Theorems	211
§ 5. Improvement of Estimates	215
§ 6. Approximation by Algebraic Polynomials	219
§ 7. Spline Approximation	223
§ 8. Approximation of Analytic Functions	229
§ 9. Approximation Spaces	234
§ 10. Problems	236
§ 11. Notes	237
 Chapter 8. Influence of Endpoints in Polynomial Approximation	 238
§ 1. Introduction	238
§ 2. Local Inequalities for Polynomials	239
§ 3. Properties of the Jackson Operators $P_{n,m}(f)$	243
§ 4. Simultaneous Approximation of Functions and Their Derivatives ..	245
§ 5. Brudnyi's Theorem	252
§ 6. Inverse Theorems	257
§ 7. Approximation Spaces for Algebraic Polynomials	259
§ 8. Problems and Notes	266
 Chapter 9. Approximation by Operators	 267
§ 1. Introduction	267
§ 2. Computation of Some Norms	268
§ 3. Examples of Linear Polynomial Operators	273
§ 4. Positive Operators	277
§ 5. Projections onto Spaces Spanned by Exponentials	281
§ 6. Lower Bounds	285
§ 7. Projections in Arbitrary Banach Spaces	288
§ 8. Families of Commuting Operators	294
§ 9. Problems	301
§ 10. Notes	301
 Chapter 10. Bernstein Polynomials	 303
§ 1. Definitions and Inequalities	303
§ 2. Derivatives of Bernstein Polynomials	305
§ 3. Approximation and Shape Preserving Properties	307
§ 4. Bernstein Polynomials of Convex Functions	309
§ 5. Saturation and Inverse Theorems	311
§ 6. Saturation Theorems for Kantorovich Polynomials	315
§ 7. Characterization of Approximation Spaces	321

§ 8. Further Properties and Variants of Bernstein Polynomials. Weak Haar Spaces	326
§ 9. Problems	330
§ 10. Notes	331
Chapter 11. Approximation of Classes of Functions, Müntz Theorems .	333
§ 1. Approximation by Fourier Sums	333
§ 2. Saturation Classes	336
§ 3. Saturation of the Fejèr Operators	339
§ 4. Theorems of Korneichuk	342
§ 5. Müntz' Theorem. Approximation of Monomials	344
§ 6. Case When $\sum \lambda_k^{-1} < +\infty$. Selection of Best Powers	348
§ 7. Problems	352
§ 8. Notes	353
Chapter 12. Spline Approximation	354
§ 1. Introduction	354
§ 2. Splines with Equally Spaced Knots	356
§ 3. Approximation by Dyadic Splines	358
§ 4. Splines with Free Knots	362
§ 5. Smoothness in L_p for $0 < p < 1$	368
§ 6. Dyadic Splines in L_p , $0 < p < 1$	376
§ 7. Comparison of the Spaces $l_q^\alpha(L_p)$ and $B_q^\alpha(L_p)$	380
§ 8. Free Knot Spline Approximation in L_p , $0 < p < \infty$	384
§ 9. Problems	389
§ 10. Notes	389
Chapter 13. Spline Interpolation and Projections onto Spline Spaces ..	391
§ 1. Introduction. Lagrange Interpolation by Splines	391
§ 2. Selection of Interpolation Points	395
§ 3. Cubic Spline Interpolation	397
§ 4. Orthogonal Projection onto Splines	401
§ 5. Interpolation on \mathbb{R}	406
§ 6. Cardinal Spline Interpolation	409
§ 7. Approximation from Shift Invariant Spaces	415
§ 8. Shape Preserving Interpolation	421
§ 9. Shape Preserving Quadratic Spline Interpolation	425
§ 10. Problems	431
§ 11. Notes	431
Bibliography	434
Index	447
