|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>Introduction and basic terminology</b>                  | <b>1</b>  |
| <b>2</b> | <b>Preliminaries</b>                                       | <b>7</b>  |
| 2.1      | Triangulations . . . . .                                   | 7         |
| 2.2      | Treewidth and pathwidth . . . . .                          | 17        |
| 2.3      | Perfect graphs . . . . .                                   | 24        |
| <b>3</b> | <b>Testing superperfection of <math>k</math>-trees</b>     | <b>27</b> |
| 3.1      | Preliminaries . . . . .                                    | 28        |
| 3.2      | 2-trees and superperfection . . . . .                      | 29        |
| 3.3      | $k$ -trees and superperfection . . . . .                   | 33        |
| <b>4</b> | <b>Triangulating 3-colored graphs</b>                      | <b>39</b> |
| 4.1      | A characterization of partial 2-trees . . . . .            | 40        |
| 4.2      | $c$ -Triangulating 3-colored graphs . . . . .              | 42        |
| 4.3      | Algorithm for 3-colored graphs . . . . .                   | 45        |
| 4.3.1    | Triangulating $G$ into a 2-tree $H$ . . . . .              | 46        |
| 4.3.2    | Making the cell-completion $\overline{G}$ . . . . .        | 47        |
| 4.3.3    | Making a list of the cells . . . . .                       | 48        |
| 4.3.4    | Triangulating each cell . . . . .                          | 49        |
| 4.4      | Some variants . . . . .                                    | 49        |
| <b>5</b> | <b>Only few graphs have bounded treewidth</b>              | <b>51</b> |
| 5.1      | Preliminaries . . . . .                                    | 53        |
| 5.2      | A bound on the number of subgraphs of $k$ -trees . . . . . | 53        |
| 5.3      | The separator method . . . . .                             | 55        |
| 5.4      | Further results . . . . .                                  | 59        |
| <b>6</b> | <b>Approximating treewidth and pathwidth of a graph</b>    | <b>61</b> |
| 6.1      | Approximating pathwidth . . . . .                          | 62        |
| 6.2      | Approximating treewidth . . . . .                          | 66        |
| 6.3      | Absolute approximations . . . . .                          | 72        |

|           |   |            |
|-----------|---|------------|
| <b>7</b>  | <b>Approximating treewidth and pathwidth for some classes of perfect graphs</b>         | <b>75</b>  |
| 7.1       | Preliminaries . . . . .   | 77         |
| 7.2       | Splitgraphs and cotriangulated graphs . . . . .   | 79         |
| 7.2.1     | Exact algorithms for the treewidth and pathwidth of cotriangulated graphs . . . . .     | 81         |
| 7.3       | Convex graphs . . . . .   | 84         |
| 7.4       | Permutation graphs . . . . .  | 86         |
| 7.5       | Cocomparability graphs . . . . .  | 88         |
| <b>8</b>  | <b>Treewidth of chordal bipartite graphs</b>  | <b>93</b>  |
| 8.1       | Preliminaries . . . . .   | 93         |
| 8.2       | Triangulating chordal bipartite graphs . . . . .  | 95         |
| 8.3       | Optimal triangulations of chordal bipartite graphs . . . . .                            | 100        |
| 8.4       | Cliques in optimal triangulations of chordal bipartite graphs . . . . .                 | 100        |
| 8.5       | An algorithm for the treewidth of chordal bipartite graphs . . . . .                    | 102        |
| <b>9</b>  | <b>Treewidth and pathwidth of permutation graphs</b>                                    | <b>105</b> |
| 9.1       | Preliminaries . . . . .   | 106        |
| 9.2       | Separators obtained from scanlines . . . . .  | 107        |
| 9.3       | Treewidth and pathwidth of permutation graphs are equal . . . . .                       | 109        |
| 9.4       | Candidate components . . . . .  | 109        |
| 9.5       | An algorithm for the treewidth of a permutation graph . . . . .                         | 113        |
| <b>10</b> | <b>Treewidth of circle graphs</b>   | <b>117</b> |
| 10.1      | Preliminaries . . . . .   | 118        |
| 10.2      | Scanlines . . . . .   | 118        |
| 10.3      | Components and realizers . . . . .  | 119        |
| 10.4      | Algorithm . . . . .   | 123        |
| <b>11</b> | <b>Finding all minimal separators of a graph</b>  | <b>125</b> |
| 11.1      | Preliminaries . . . . .   | 127        |
| 11.2      | Good pairs . . . . .  | 128        |
| 11.3      | Minimal pairs . . . . .   | 130        |
| 11.4      | An algorithm which finds all minimal separators . . . . .                               | 132        |
| <b>12</b> | <b>Treewidth and pathwidth of cocomparability graphs of bounded dimension</b>           | <b>137</b> |
| 12.1      | Preliminaries . . . . .   | 138        |
| 12.2      | Pieces . . . . .  | 140        |
| 12.3      | Pieces $P(S_1, S_2)$ with $S_1 \not\subseteq S_2$ and $S_2 \not\subseteq S_1$ . . . . . | 141        |
| 12.4      | Pieces $P(S_1, S_2)$ with $S_1 \subseteq S_2$ . . . . .                                 | 144        |
| 12.5      | The algorithm . . . . .   | 146        |

|   |            |
|---|------------|
| <b>13 Pathwidth of pathwidth-bounded graphs</b>                     | <b>147</b> |
| 13.1 Preliminaries . . . . .  | 148        |
| 13.2 A decision algorithm for pathwidth . . . . .                   | 151        |
| 13.3 The interval model . . . . .                                   | 152        |
| 13.4 Typical sequences . . . . .                                    | 153        |
| 13.5 Characteristic path-decompositions . . . . .                   | 161        |
| 13.6 A full set for a start node . . . . .                          | 163        |
| 13.7 A full set for a join node . . . . .                           | 163        |
| 13.8 A full set for a forget node . . . . .                         | 166        |
| 13.9 A full set for an introduce node . . . . .                     | 168        |
| <b>14 Treewidth of treewidth-bounded graphs</b>                     | <b>173</b> |
| 14.1 Preliminaries . . . . .  | 173        |
| 14.2 A full set for a start node . . . . .                          | 177        |
| 14.3 A full set for a join node . . . . .                           | 177        |
| 14.4 A full set for a forget node . . . . .                         | 179        |
| 14.5 A full set for an introduce node . . . . .                     | 181        |
| <b>15 Recognizing treewidth-bounded graphs</b>                      | <b>185</b> |
| 15.1 Leaf-path-collections . . . . .                                | 185        |
| 15.2 Matchings . . . . .  | 186        |
| 15.3 Dangling vertices . . . . .                                    | 187        |
| 15.4 Partly-filled graphs . . . . .                                 | 188        |
| 15.5 A linear time algorithm finding a tree-decomposition . . . . . | 189        |
