<i>Introduction</i>	1
<i>Interdependence of sections</i>	8
<i>Notation</i>	10
<i>Chapter 1. Preliminaries</i>	15
1.1 Topology and analysis	15
1.2 Radon measures	20
* 1.3 Some basic principles of probability theory	37
1.4 Selected topics on locally convex spaces	46
* 1.5 Integral representation theory for convex compact sets	54
* 1.6 C_0 -Semigroups of operators and abstract Cauchy problems	61
<i>Chapter 2. Korovkin-type theorems for bounded positive Radon measures</i>	74
2.1 Determining subspaces for bounded positive Radon measures	74
2.2 Determining subspaces for discrete Radon measures	87
2.3 Determining subspaces and Chebyshev systems	100
2.4 Convergence subspaces associated with discrete Radon measures	108
2.5 Determining subspaces for Dirac measures	114
2.6 Choquet boundaries	124
<i>Chapter 3. Korovkin-type theorems for positive linear operators</i>	141
3.1 Korovkin closures and Korovkin subspaces for positive linear operators	141
3.2 Special properties of Korovkin closures	155
3.3 Korovkin subspaces for positive projections	169
3.4 Korovkin subspaces for finitely defined operators	180
<i>Chapter 4. Korovkin-type theorems for the identity operator</i>	195
4.1 Korovkin closures and Korovkin subspaces for the identity operator	195
4.2 Strict Korovkin subsets. Korovkin's theorems	212
4.3 Korovkin closures and state spaces. Spaces of parabola-like functions	227
4.4 Korovkin closures and Stone-Weierstrass theorems	237
4.5 Finite Korovkin sets	248

<i>Chapter 5. Applications to positive approximation processes on real intervals</i>	264
5.1 Moduli of continuity and degree of approximation by positive linear operators	265
5.2 Probabilistic methods and positive approximation processes	283
5.3 Discrete-type approximation processes	320
5.4 Convolution operators and summation processes	352
<i>Chapter 6. Applications to positive approximation processes on convex compact sets</i>	377
6.1 Positive approximation processes associated with positive projections	378
6.2 Positive projections and their associated Feller semigroups	423
6.3 Miscellaneous examples and degenerate diffusion equations on convex compact subsets of \mathbb{R}^p	447
<i>Appendices</i>	481
<i>A. Korovkin-type approximation theory on commutative Banach algebras, by M. Pannenberg</i>	481
A.1 Universal Korovkin-type approximation theory on commutative Banach algebras	483
A.2 Commutative group algebras	497
A.3 Finitely generated commutative Banach algebras and polydisk algebras	503
A.4 Generalized analytic functions and algebras generated by inner functions	510
A.5 Extreme spectral states and the Gleason-Kahane-Zelazko property	513
<i>B. Korovkin-type approximation theory on C^*-algebras, by F. Beckhoff</i>	518
B.1 Approximation by positive linear functionals	519
B.2 Approximation by positive linear operators	521
<i>C. A list of determining sets and Korovkin sets</i>	526
C.1 Determining sets in $\mathcal{C}_0(X)$ (X locally compact Hausdorff space)	526
C.2 Determining sets in $\mathcal{C}(X)$ (X compact)	528
C.3 Korovkin sets in $\mathcal{C}_0(X)$ (X locally compact Hausdorff space)	530
C.4 Korovkin sets in $\mathcal{C}(X)$ (X compact Hausdorff space)	532
C.5 Korovkin sets in $L^p(X, \mu)$ -spaces	535

<i>D. A subject classification of Korovkin-type approximation theory with a subject index</i>	537
D.1 Subject classification (SC)	538
D.2 Subject index	541
Bibliography	555
Symbol index	607
Subject index	617
