<b>Series editor's preface</b>	<b>v</b>
<b>Preface</b>	<b>xi</b>
<b>Preface to the Russian edition</b>	<b>xiii</b>
<b>Introduction</b>	<b>xv</b>
<b>Chapter 1 Elements of segment analysis</b>	<b>1</b>
§ 1.1. Segment arithmetic	1
1.1.1. Partial orderings	2
1.1.2. Lattice operations	2
1.1.3. Arithmetic operations	4
1.1.3.1. Addition and subtraction	4
1.1.3.2. Multiplication and division	5
1.1.4. Distance and norm	7
§ 1.2. Segment sequences	8
1.2.1. Segment limits	8
1.2.2. Theorems on segment limits	10
§ 1.3. Segment functions	12
1.3.1. The segment limit of a segment function	13
1.3.2. Segment derivatives	15
1.3.3. Segment continuity	17
1.3.4. H-continuity	18
<b>Chapter 2 Hausdorff distance</b>	<b>23</b>
§ 2.1. Hausdorff distance between subsets of a metric space	23
§ 2.2. The metric space $F_\Delta$	25
§ 2.3. H-distance in $A_\Omega$ and its properties	31
§ 2.4. Relationships between uniform distance and the Hausdorff distance	35

- § 2.5. The modulus of H-continuity 40
- § 2.6. The order of the modulus of H-continuity 42
- § 2.7. H-continuity on a subset 44
- § 2.8. H-distance with weight 46

### **Chapter 3 Linear methods of approximation**

49

- § 3.1. Convergence of sequences of positive operators 49
- § 3.2. The order of approximation of functions by positive linear operators 54
- § 3.3. Approximation of periodic functions by positive integral operators 55
  - 3.3.1. The Fejer operator 57
  - 3.3.2. The Jackson operator 61
  - 3.3.3. The generalized Jackson operator 64
  - 3.3.4. The Vallée-Poussin operator 67
- § 3.4. Approximation of functions by positive integral operators on a finite closed interval 70
  - 3.4.1. The Landau operator 70
  - 3.4.2. The generalized Landau operator 71
- § 3.5. Approximation of functions by summation formulas on a finite closed interval 71
  - 3.5.1. Bernstein polynomials 72
  - 3.5.2. Fejer interpolational polynomials 78
- § 3.6. Approximation of nonperiodic functions by integral operators on the entire real axis 81
  - 3.6.1. The Fejer operator in the nonperiodic case 82
  - 3.6.2. The generalized Jackson operator in the nonperiodic case 83
  - 3.6.3. The Weierstrass operator 84
- § 3.7. Convergence of derivatives of linear operators 85
- § 3.8. A-distance 96
- § 3.9. Approximation by partial sums of Fourier series 99

### **Chapter 4 Best Hausdorff approximations**

108

- § 4.1. Best approximation by algebraic and trigonometric polynomials 109
  - 4.1.1. Uniqueness conditions for the polynomial of best approximation 112
  - 4.1.2. Estimates for the best approximation 120
    - 4.1.2.1. Best approximation of the delta-function 120
    - 4.1.2.2. Universal estimates 125
    - 4.1.2.3. Exact asymptotic behavior of the best approximation 128

4.1.2.4.	Generalizations of Jackson's theorem	140
4.1.2.5.	Approximation of certain concrete functions	142
4.1.2.6.	Approximation of convex functions	157
4.1.2.7.	An analogue of Nikol'skii's theorem	165
4.1.2.8.	Comonotone approximations	167
§ 4.2.	Best approximation by rational functions	174
4.2.1.	Universal estimates for bounded functions	175
4.2.2.	Unimprovability of the universal estimate	190
4.2.3.	Approximation of analytic functions with singularities on the boundary of a closed interval	198
§ 4.3.	Best approximation by spline functions	203
4.3.1.	Spline functions with equidistant knots	206
4.3.2.	Spline functions with free knots	212
§ 4.4.	Best approximation by piecewise monotone functions	213

## Chapter 5 Converse theorems

227

§ 5.1.	Existence of a function with preassigned best approximations	227
§ 5.2.	Converse theorems for the approximation by algebraic and trigonometric polynomials	233
5.2.1.	The trigonometric case	234
5.2.2.	The algebraic case	244
§ 5.3.	Converse theorems for approximation by spline functions	247
§ 5.4.	Converse theorems for approximation by rational and partially monotone functions	255
§ 5.5.	Converse theorems for approximation by positive linear operators	257

## Chapter 6 $\varepsilon$ -Entropy, $\varepsilon$ -capacity and widths

263

§ 6.1.	$\varepsilon$ -entropy and $\varepsilon$ -capacity of the set $F_{\Delta}^M$	264
§ 6.2.	The number of $(p,q)$ -corridors	270
§ 6.3.	Labyrinths	280
6.3.1.	Passages in labyrinths	289
§ 6.4.	$\varepsilon$ -entropy and $\varepsilon$ -capacity of bounded sets of connected compact sets	291
§ 6.5.	Widths	293
6.5.1.	Widths of the set of bounded real functions	293

<b>Chapter 7</b>	<b>Approximation of curves and compact sets in the plane</b>	<b>304</b>
§ 7.1.	Approximation by polynomial curves	308
§ 7.2.	Characterization of best approximation in terms of metric dimension	315
§ 7.3.	Approximation by piecewise monotone curves	318
§ 7.4.	Other methods for the approximation of curves in the plane	319
<b>Chapter 8</b>	<b>Numerical methods of best Hausdorff approximation</b>	<b>322</b>
§ 8.1.	One-sided Hausdorff distance	322
8.1.1.	Existence and uniqueness of the polynomial of best one-sided approximation	323
§ 8.2.	Coincidence of polynomials of best approximation with respect to one- and two-sided Hausdorff distance	326
§ 8.3.	Numerical methods for calculating the polynomial of best one-sided approximation	327
