

LIST OF CONTENTS

INVITED PAPERS

Multiple Numerical Integration Formula Using Regular Lattices S. HITOTUMATU	3
Asymptotic Expansions of Multiple Integrals of Rapidly Oscillating Functions L.C. HSU	9
Optimization Theory For Infinite Dimensional Set Functions HANG-CHIN LAI	13
Iterative Computation in Dynamic Optimization E.S. LEE	23
I. APPROXIMATION - Theory and Techniques	
Some Pal Type Interpolation Problems M.R. ALHLAGHI and A. SHARMA	37
On A Method Of Approximation By Means Of Spline Functions L.G.N. AMATI and E. SANTI	41
Weak Convergence and the Prokhorov Radius For Probability Measures G.A. ANASTASSIOU	47
The Estimation Of N-Widths Of Certain Periodic Function Classes HAN-LIN CHEN and CHUN LI	49
An Error Approximation YI-LING CHIANG	53
Uniform Approximation Of Christoffel Numbers For Laguerre Weight I. CRAVERO and L. GATTESCHI	59
Some Convergence Estimates For the Extended Interpolation G. CRISCUOLO, G. MASTROIANNI and D. OCCORSIO	63
Modified Summation Operators And Their Applications JIZHENG DI	67

Existence Of Non-Linear Uniform Approximations Under Hermite (Lagrange) Type Interpolatory Constraints C.B. DUNHAM	69
Perturbation Theorem For Constrained Mean Approximation C.B. DUNHAM and CHANGZHONG ZHU	73
The Local And Far Field Approximate Solutions Of The Heat Conduction Equation With Cylindrical Symmetry CHAO-KANG FENG	77
Pointwise And Nodal Error Estimation In Linear Boundary Value Problems Solved By The Standard Parallel Shooting G. GHERI	81
On Approximation Of Classes Of Functions For Modified Meyer-König-Ziller Operators SHUNSHENG GUO	85
Approximation By Composite Polynomials K. HATANO	89
Constrained Approximations V.H. HRISTOV and K.G. IVANOV	93
A Pivoting Scheme For The Interval Gauss-Seidel Method: Numerical Experiments CHEN-YI HU and R.B. KEARFOTT	97
Rational Approximation By The Method Of Numerical Integration YONG JIANG	101
Reliability Analysis Using Dataflow Graph Models And Approximate Solutions K.M. KAVI and TSAIR-CHIN LIN	105
Computation Of Filters By Discrete Approximation H. KOREZLIOGLU and W.J. RUNGGALDIER	109
$L^1(R)$ -Optimal Recovery On Some Differentiable Function Classes CHUN LI	113
Some Results On Padé Approximants JIA-LIANG LI	117
RS Method For Solving Integral Equations And Its Error Estimate YUESHENG LI and HONGYANG CHAO	121
On Chebyshev Approximation In Several Variables (III) X.Z. LIANG and X.M. HAN	125

Asymptotic Solutions Of The Vector Nonlinear Boundary Value Problems GUANG-XU LIU	129
Some Problems In Pansystems Approximation Theory HUIJUN LIU	133
An Extension Of A Strong Law Of Large Numbers Of Markov Chains WEN LIU	135
On Relative Pseudo-centre and Pseudo-radius JIANKE LU	139
On L_1 -Mean Approximation To Convex Functions By Positive Linear Operators XU-GUANG LU	143
On The Width Of Class Of Periodic Functions Of Two Variables JUN-BO LUO	147
Error Estimation For The Shooting Method In Nonlinear Boundary Value Problems P. MARZULLI	151
Direct Theorems For Best Approximation In Banach Spaces T. NISHISHIRAHO	155
Converse Theorems for Approximation On Discrete Sets G. SCHMEISSER	159
Geometric Continuity On Curves And Surfaces XI-QUAN SHI and REN-HONG WANG	163
Characterization Of Weights In Weighted Trigonometric Approximation XIAN-LIANG SHI	165
The Convergence Criteria And Critical Order Of Hermite-Fejer Type Interpolation YING GUANG SHI	169
On Queueing Approximation Formulas For Mean Waiting Time H.A. SHOLL and YIPING DING	171
An Estimate Of The Rate Of Convergence Of Fourier Series Of A Function Of Wiener's Class R.N. SIDDIQI	175
A Remark On The Approximation In The Locally Convex Space WENHUA SONG	179

Approximation Theory And Harmonic Analysis On Locally Compact Groups WEIYI SU	181
A Fe-Splitting-Up Method And Its Application To Distributed Parameter In Parabolic Equations XUE-CHENG TAI and P. NEITTAANMAKI	185
Korovkin Type Theorem On $C[0,1]$ S. TAKAHASI	189
Direct Numerical Integration Of Structural Dynamic Equations Using Higher Order Pade Approximations QINGSHENG TAO	193
On Hermite Interpolation In Roots Of Unity TIAN-LIANG TU	197
A Note On Non-Negative Polynomial Interpolation QUAN-LONG WANG and SEN WANG	201
$S_{\mu+1}^{\mu}$ Surface Interpolations Over Triangulations REN-HONG WANG and XI-QUAN SHI	205
On Asymptotic Expansion Of Rapidly Oscillatory Integrals J.N. WEI, C.X. HUANG and Z.D. DONG	209
The Application Of Bivariate Cubic Spline ZHEN-XIANG XIONG and XU-YANG LI	213
The Problem Of Matrix Pade Approximation GUO-LIANG XU and A. BULTHEEL	217
Interpolation Theorems LIHUA YANG	221
Error Analysis Of Recurrence Technique For The Calculation Of Bessel Function $I_{\nu}(x)$ T. YOSHIDA	225
The Blending Interpolation On A Curved Triangle Y.S. ZHOU and Z.P. SHENG	229
I. OPTIMIZATION - Theory and Techniques	
A Maximum Principle For Control Of Piecewise Deterministic Markov Processes M.A.H. DEMPSTER and J.J. YE	235

An Axiomatic Approach To The Derivatives Of Nonsmooth Functions J.L. DONG and T. YU	241
Shape Optimization For General Structures Using MCADS YUANXIAN GU and GENGDONG CHENG	245
A New Method For Large Scale Sparse Linear Programming YONGCHANG JIAO and KAIZHOU CHEN	249
Nonlinear Control Theory J. JONES, JR.	253
On The Optimal Control Synthesis For A Class of Nonlinear Mechanical Systems P. KIRIAZOV and P. MARINOV	259
An Informational Entropy Approach To Optimization XINGSI LI and A.B. TEMPLEMAN	263
First And Second Order Sensitivity Analysis Of Shape Optimization Based On Variational Method H.Q. LIU and R.W. XIA	267
Optimal Design Of Getting And Delivering System Of Crude Oil YANG LIU, CHENG GENG DONG and QIAN LING XI	271
Optimal Wind Choice In Races With Finish V. MAZALOV and S. VINNICHENKO	275
Extremal Problems And A Duality Phenomenon S.G. REVÉSZ	279
The Expansion Of Functions Under Transformation And Its Application To Optimization YUN-KANG SUI	283
A Combinatorial Algorithm For 0-1 Programming HUAN-CHUN SUN and SHENG-GEN MAO	287
Fixed Point Algorithms And Its Applications To Nondifferentiable Programming HUANWEN TANG, JIANG YE, JIAN GUO and YUNJIAO HU	291
Optimal And Adaptive Communication Strategies In Distributed Decision Tree Algorithms A. TAUDES	295
Fuzzy Stochastic Multi-Objective Programming CAIHUA WANG and PU LIU	299

Dynamic Programming And Basic Inequalities CHUNG-LIE WANG	303
Multiobjective Optimization In Spillway Profile SHU-YU WANG and XIAO-BAO ZHOU	309
A Parallel Method Of Structural Optimization XICHENG WANG	313
Integer Search Method For Integer Linear Programming XINGBAO WU	317
Nonlinear Analysis By Parametric Quadratic Programming Method W.X. ZHONG and R.L. ZHANG	321
Generalized Fritz-John Necessary Conditions For Quasidifferentiable Minimization ZUN-QUAN XIA	325

II. COMPUTING - Theory and Techniques

Orthogonal Polynomials In A-Priori Image Reconstruction: Theory And Computation A.G. LAW and A.D. STRILAEFF	331
OPL: A Notation And Solution Methodology For Hierarchically Structured Optimization Problems B. MACLEOD and R. MOLL	337
Approximation To The Solution Of The Thomas-Fermi Equation I. NINOMIYA	341
Numerical Solution Of Plate Bending Problems In Two Dimensions T. SCAPOLLA	345
Minimum-Weight Design Of Beams For Deflection By ODE Techniques And Software YUAN SI	349
A Continuous/Discrete Nonlinear Optimization Design Method DE LIN XIA and JINGFANG ZHOU	353
Explicit Sensitivity Analysis And Its Applications In 2-D Structural Optimization KEFENG ZHANG, SHIBAO GAO and SHUYU WANG	357
A Direct Algorithm For Linear Complementary Problem Of Quadratic Programming - Application To The Parametric Variational Principle, PVFEM PAN ZENG	361

IV. APPLICATIONS

Integrative Optimization For Architectural Structure Design And Its Practical Examples HOU CHANG	367
Gronwall-Bihari Type Inequalities For Distributions J. CONLAN and CHUNG-LIE WANG	371
Equilibrium Distribution Of Disks On The Rotating Table - A Sort Of Two Dimensional Geometric Layout Optimization With Behavioural Constraints S.E. DENG, H.F. TENG and W.X. ZHONG	377
YIDOYU--An Optimization Program System For Wing Structures HUILIANG DING, XIANXUE SUN, QIHAO LONG, WENPU CHEN and BINGCHEN PAN	381
Utilization Of The Multi-Level Approach In Optimal Design Of R.C. Structures K.S. DINNO	385
Reliability Assessment In Fracture Mechanics YAONAN GONG and CHUN QIAN	389
On Rough Models Of History Records A. KOWALCZYK	393
Water Coning In Oil Wells Via A New Variational Technique For Free Boundary Problems S.M. MAKKY and A.J. HAMAD	399
Economic Strategies In Outport Fishing Communities In Newfoundland S.J. MAY, H.S. GASKILL and J.D. MAY	403
Half Flexible Simplex Method And Applications In Engineering TIEJUN NIU, SHOUFAN LI, ZAISHEN WANG and YANCHUN LIANG	407
An Absorbing Boundary Algorithm For The FD-TD Method With Arbitrary Incidence Angle J.E. ROY and D.H. CHOI	411
Approximate Simulation Model For Analysis And Optimization In Engineering System Design J. SOBIESZCZANSKI-SOBIESKI	415
Optimal Design Of Minimax Deflection Of A Cylindrical Shell HUAN-RAN YU and BIN LIANG	427

Application Of Optimization To Aircraft Engine Disks XIAO-MING YU and MEI MA	431
Principle Of Maximum Information, Holography And Application HAORAN ZHANG	435
Dynamic Programming Method For The Analysis Of The Most Unfavourable Live Load WANXIE ZHONG and WEIPING SHEN	437
AUTHOR INDEX	441
