

CONTENTS

Chapter 1	ZEROS AND POLES OF PADÉ APPROXIMATIONS TO e^z , AND ZEROS OF GENERALIZED BESSEL POLYNOMIALS	
1.	Introduction	11
2.	Zero-free parabolic regions for sequences of polynomials	13
3.	Zeros and poles of Padé approximants to e^z : a survey	19
4.	On the zeros of generalized Bessel polynomials	26
	REFERENCES	33
Chapter 2	THE SAFF-VARGA WIDTH CONJECTURE AND THE MITTAG-LEFFLER FUNCTIONS	
1.	Introduction	36
2.	Basic properties of the Mittag-Leffler function	39
3.	The zeros of $s_m(z; f_\lambda)$ in the critical sector $ \arg z \leq \pi/2\lambda$	41
4.	The asymptotic behavior of the zeros of $s_m(R_m z)$ outside the critical sector	44
5.	Discussion of Figures 2.1.-2.3	46
	REFERENCES	50
Chapter 3	THE ENESTRÖM-KAKEYA THEOREM AND ITS SHARPNESS	
1.	Introduction	52
2.	Sharpness of the bounds (1.3) of the Eneström-Kakeya Theorem 3.2	54

3. An extension of the Eneström-Kakeya theorem and its sharpness	59
REFERENCES	67

Chapter 4 EXTENSIONS OF A THEOREM OF J.L. WALSH ON THE OVERCONVERGENCE OF DIFFERENCES OF INTERPOLATING POLYNOMIALS

1. Introduction	69
2. Extensions of Walsh's Theorem in the roots of unity	72
3. The extension of Walsh's Theorem 4.1 to the meromorphic case	78
4. The Hermite-Birkhoff (H-B) interpolation problem in the roots of unity.	85
5. Sharpness of ρ^2 in Walsh's Theorem	88
REFERENCES	92

Chapter 5 BEST COMPLEX VS. REAL RATIONAL APPROXIMATION

1. Introduction	94
2. Uniqueness or nonuniqueness in terms of the alternation set	97
3. Sharpenings of Theorems 5.2 and 5.3	102
4. Final remarks and additional open questions	105
REFERENCES	107

Chapter 6 THE LORENTZ CONJECTURES ON ODD AND EVEN FUNCTIONS

1. Introduction	109
2. The Lorentz Conjecture 6.1: some partial results	110
3. The Lorentz Conjectures 6.2-6.4: some partial results	115
REFERENCES	118

Chapter 7 THE WHITTAKER CONJECTURE AND THE "1/9" CONJECTURE

1. Introduction	120
2. The Whittaker Conjecture: history	120
3. Disproving the Whittaker Conjecture 7.1	125
4. The "1/9" Conjecture	129
REFERENCES	134
