EDITOR'S PREFACE	ix
PREFACE	xi

Chapter

1. BASIC CONCEPTS	1
Introduction	1
Integral Domains, Fields and Vector Spaces	2
Subspaces, Bases and Inner Products	4
Spaces, Subspaces and Approximation	7
The Continuous Function	8
Polynomial Subspaces	9
Spaces Generated by Differential Equations	10
The Piecewise Linear Function	13
Discussion	15
Bibliography and Comments	16
2. POLYNOMIAL APPROXIMATION	17
Introduction	17
Piecewise Linear Functions	22
Curve Fitting by Straight Lines	24
A One Dimensional Process in Dynamic Programming	26
The Functional Equation	27
The Principle of Optimality	29
A Direct Derivation	29
Curve Fitting by Segmented Straight Lines	30
A Dynamic Programming Approach	31
A Computational Procedure	32
Three Dimensional Polygonal Approximation	33
The Orthogonal Polynomials	35
The Approximation Technique	36

	Discussion	37
	Bibliography and Comments	38
3.	POLYNOMIAL SPLINES	40
	Introduction	40
	The Cubic Spline I	40
	Construction of the Cubic Spline	41
	Existence and Uniqueness	46
	A Computational Algorithm - Potter's Method	48
	Splines via Dynamic Programming	53
	Derivation of Splines by Dynamic Programming	54
	Equivalence of the Recursive Relations obtained by Dynamic Programming and the Usual results	59
	Cardinal Splines	61
	Polynomial Splines	63
	Generalized Splines	64
	Mean Square Spline Approximation	65
	The Cubic Spline II	66
	The Minimization Procedure	67
	The Functional Equation	68
	Recursion Relations	69
	Bibliography and Comments	69
4.	QUASILINEARIZATION	71
	Introduction	71
	Quasilinearization I	71
	The Newton Raphson Method	72
	Quasilinearization II	76
	Existence	77
	Convergence	79
	An Example, Parameter Identification Unknown Initial Conditions	82
	Damped Oscillations	85
	Segmental Differential Approximation Differential Systems with Time Varying Coefficients	88
	A Method of Solution	92
	An Interesting Case	94
	Discussion	95
	Bibliography and Comments	98
	Discussion	100
	Bibliography and Comments	101

5.	DIFFERENTIAL APPROXIMATION	103
	Introduction	103
	Differential Approximation	103
	Linear Differential Operators	104
	Degree of Approximation	105
	Improving the Approximation	106
	An Example	107
	Differential-Difference Equations	110
	A Useful Approximation to $g(t)$	112
	Discussion	115
	An Example	117
	Functional Differential Equations	119
	The Nonlinear Spring	120
	The Van der Pol Equation	122
	Bibliography and Comments	124
6.	DIFFERENTIAL QUADRATURE	125
	Introduction	125
	Differential Quadrature	125
	Determination of the Weighting Coefficients	126
	A First Order Problem	129
	A Nonlinear Wave Equation	131
	Systems of Nonlinear Partial Differential Equations	136
	Higher Order Systems	139
	Long Term Integration	141
	$G(y)$ Linear	142
	$G(y)$ Nonlinear	142
	A Mathematical Problem	143
	Systems with Partial Information	144
	Bibliography and Comments	147
7.	EXPONENTIAL APPROXIMATION	149
	Introduction	149
	Approximation in Function Space	150
	An Example - Pharmacokinetics	151
	Other Physical Processes	153
	Proney's Method	153
	The Renewal Equation	156
	The Fredholm Integral Equation	158
	Bibliography and Comments	160

8.	THE RICCATI EQUATION	161
	Introduction	161
	The Linear Differential Equation	162
	Differential Inequalities	164
	Solution of the Riccati Equation in terms of the Maximum Operation	166
	Upper and Lower Bounds	169
	Successive Approximations via Quasilinearization	170
	An Illustrative Example	170
	Higher Order Approximations	171
	Multidimensional Riccati Equation	173
	Variational Problems and the Riccati Equation	175
	Bibliography and Comments	176
9.	SOLUTION OF APPROXIMATE EQUATIONS	178
	Introduction	178
	First Order Differential Equations	179
	The Second Order Differential Equation	179
	Discussion	182
	Linear Perturbations	183
	The Van der Pol Equation I	184
	The Van der Pol Equation II	186
	The Riccati Equation	189
	$u'' + a(t)u = 0$	190
	Another Approach	193
	Discussion	197
	Bibliography and Comments	198
10.	MAGNETIC FIELD DETERMINATION	200
	Introduction	200
	The Theoretical Problem	201
	Maxwell's Equations	203
	A Variational Principle	206
	The Finite Element Method	208
	Computational Aspects	212
	Analytical Considerations	213
	Boundary Conditions	216
	Discussion	220
	Bibliography and Comments	220
	INDEX	222
