

TABLE OF CONTENTS

---

List of notations . . . . .	VI
Summary . . . . .	IX
Chapter I: Abstract Padé-approximants in operator theory . . . . .	1
§ 1. Motivation . . . . .	1
§ 2. Introduction . . . . .	1
2.1. Banach spaces and Banach algebras . . . . .	1
2.2. Linear and multilinear operators . . . . .	2
2.3. Fréchet-derivatives . . . . .	4
2.4. Abstract polynomials . . . . .	5
§ 3. Definition . . . . .	10
3.1. Univariate Padé-approximant . . . . .	10
3.2. Abstract analyticity . . . . .	11
3.3. Abstract Padé-approximant . . . . .	13
§ 4. Existence of a solution . . . . .	15
§ 5. Relations between $(P,Q)$ and $(P_\star, Q_\star)$ . . . . .	18
5.1. Order and degree of $P, Q, P_\star$ and $Q_\star$ . . . . .	18
5.2. Order of $F.Q_\star - P_\star$ . . . . .	20
§ 6. Covariance properties . . . . .	24
§ 7. Recurrence relations . . . . .	27
7.1. Two-term identities . . . . .	27
7.2. The $\varepsilon$ -algorithm . . . . .	28
7.3. The qd-algorithm . . . . .	34
§ 8. Existence of an irreducible form . . . . .	40
§ 9. Finite dimensional spaces . . . . .	43
§ 10. The abstract Padé-table . . . . .	45
§ 11. Regularity and normality . . . . .	49
11.1. Definitions . . . . .	49
11.2. Normality . . . . .	49
11.3. Regularity . . . . .	52
11.4. Numerical examples . . . . .	53
§ 12. Projection property and product property . . . . .	53
Chapter II: Multivariate Padé-approximants . . . . .	59
§ 1. Motivation . . . . .	59
§ 2. Existence of a nontrivial solution . . . . .	60
§ 3. Covariance properties . . . . .	62

§ 4. Near-Toeplitz structure of the homogeneous system . . . . .	65
4.1. Displacement rank . . . . .	65
4.2. Numerical examples . . . . .	68
§ 5. Three-term identities . . . . .	69
5.1. Cross ratios . . . . .	69
5.2. Three-term identities . . . . .	70
§ 6. Accelerating the convergence of a table with multiple entry . . . . .	72
6.1. Table with double entry . . . . .	72
6.2. Table with multiple entry . . . . .	72
6.3. Applications . . . . .	73
§ 7. Comparison with some other types of multivariate Padé-approximants . . . . .	75
7.1. General order Padé-type rational approximants introduced by Levin . . . . .	76
7.2. Canterbury approximants, Lutterodt approximants and Karlsson-Wallin approximants . . . . .	77
7.3. Numerical examples . . . . .	81
7.4. Rational approximations of multiple power series introduced by Hillion . . . . .	88
§ 8. Beta function . . . . .	89
8.1. Introduction . . . . .	89
8.2. Numerical values . . . . .	91
8.3. Figures . . . . .	92
Chapter III: The solution of nonlinear operator equations . . . . .	94
§ 1. Introduction . . . . .	94
§ 2. Inverse interpolation . . . . .	94
§ 3. Direct interpolation . . . . .	98
§ 4. Systems of nonlinear equations . . . . .	99
§ 5. Initial value problems . . . . .	103
§ 6. Boundary value problems . . . . .	109
§ 7. Partial differential equations . . . . .	113
§ 8. Nonlinear integral equation of Fredholm type . . . . .	116
§ 9. Numerical stability of the Halley-iteration for the solution of a system of nonlinear equations . . . . .	122
9.1. Numerical stability of iterations . . . . .	122
9.2. The Halley-iteration . . . . .	124
9.3. Example . . . . .	129
References . . . . .	133
Subject Index . . . . .	137
