ABSTRACTS	1

## PART I. BEST APPROXIMATIONS, OPTIMAL QUADRATURE AND MONOSPINES

### **On a Class of Best Non-linear Approximation Problems and Extended Monosplines** 19

*Samuel Karlin*

§1	Formulation and description of main results.	19
2	Bounds on the number of zeros of extended monosplines.	27
3	The fundamental theorem of algebra for extended monosplines.	36
4	The improvement theorem.	37
5	Existence of minimizing extended splines.	44
6	Proof of the characterization of the extremum, as described in Theorem 1.3 for $1 < p < \infty$ .	47
7	Characterization and uniqueness in the case of $p = \infty$ in Theorem 1.3.	51
8	The total positivity nature of the Bergman and Szegö reproducing kernels.	55
9	An equivalent formulation of the best non-linear approximation problem (1.4) in $L^2$ .	59

### **A Global Improvement Theorem for Polynomial Monosplines** 67

*Samuel Karlin*

§1	Statement of theorem and ramifications.	67
2	Some preliminaries.	72
3	Proof of Theorem 3.	74

### **Applications of Representation Theorems to Problems of Chebyshev Approximation with Constraints** 83

*Allan Pinkus*

§1	Introduction.	83
2	Proof of Theorem 2 and extensions of Theorem 1.	87

3	Applications of Theorem 2.	89
4	Representation theorems with interpolation, and interpolatory approximation.	94
5	Representation theorems with boundary constraints.	98
6	Applications of representation theorems with boundary conditions.	103
<b>Gaussian Quadrature Formulae with Multiple Nodes</b>		<b>113</b>
<i>Samuel Karlin and Allan Pinkus</i>		
§1	Formulation and statement of main results.	113
2	Proof of Theorem 1 and ramifications.	121
3	Extensions and remarks.	137
<b>An Extremal Property of Multiple Gaussian Nodes</b>		<b>143</b>
<i>Samuel Karlin and Allan Pinkus</i>		
§1	Formulation and statement of results.	143
2	Preliminaries and some determinantal identities.	149
3	Proof of extremal property (Theorem D).	154
 <b>PART II. CARDINAL SPLINES AND RELATED MATTERS</b>		
<b>Oscillation Matrices and Cardinal Spline Interpolation</b>		<b>163</b>
<i>Charles A. Micchelli</i>		
§1	Introduction.	163
2	Quasi-Hermite cardinal interpolation.	168
3	Cardinal $\mathcal{L}$ -splines.	184
4	An eigenvalue problem.	189
<b>Cardinal <math>\mathcal{L}</math>-Splines</b>		<b>203</b>
<i>Charles A. Micchelli</i>		
§1	Introduction.	203
2	An eigenvalue problem.	205
3	Some special $\mathcal{L}$ -splines.	220
4	Convergence of $\mathcal{L}$ -splines.	224
5	Some applications of the Euler and Bernoulli $\mathcal{L}$ -spline.	228
6	Polynomial spline interpolation on a geometric mesh.	241
<b>On Micchelli's Theory of Cardinal <math>\mathcal{L}</math>-Splines</b>		<b>251</b>
<i>I.J. Schoenberg</i>		
§1	Introduction.	251
2	The class $S(\mathcal{L}, \eta)$ of cardinal $\mathcal{L}$ -splines.	253
3	The B-splines.	255

4	The behavior of the roots of the equation (3.4).	257
5	A proof of Theorem 2.	261
6	Micchelli's cardinal interpolation problem by elements of $S(\mathcal{L}, \eta)$ .	266
7	Proof of sufficiency in Theorem 4.	269
8	A few examples.	273

**On The Remainders and the Convergence of Cardinal Spline Interpolation for Almost Periodic Functions** 277

*I.J. Schoenberg*

§1	Introduction.	277
2	The kernel of the remainder and some of its properties.	278
3	Further properties of the kernel $K_{2m-1}(x, t)$ .	283
4	The cardinal spline interpolation formula with remainder.	286
5	A few special choices of $f(x)$ .	288
6	Applications.	291
7	Definitions and known results.	295
8	Katznelson's definition and lemma.	297
9	Two applications of Katznelson's lemma.	298
10	A conjecture.	302

**PART III. INTERPOLATION WITH SPLINES**

**Interpolation by Splines with Mixed Boundary Conditions** 305

*Samuel Karlin and Allan Pinkus*

§1	Introduction.	305
2	Proof of Theorem 1.	309
3	Examples of boundary conditions satisfying Postulate J.	314
4	Total positivity properties of Green's function for mixed boundary conditions.	318

**Divided Differences and Other Non-linear Existence Problems at Extremal Points** 327

*Samuel Karlin and Allan Pinkus*

§1	Preliminaries and statement of main results.	327
2	Polynomials with prescribed $k^{\text{th}}$ order divided differences: Proof of Theorem 1.	330
3	Extensions of Theorem 1 to various classes of spline functions and Chebyshev systems.	339
4	A general formulation and applications.	345
5	Open problems.	349

**PART IV. GENERALIZED LANDAU AND MARKOV TYPE  
INEQUALITIES AND GENERALIZED PERFECT  
SPLINES.**

<b>Notes on Spline Function VI. Extremum Problems of the Landau-Type for the Differential Operators <math>D^2 \pm 1</math></b>	<b>353</b>
<i>I.J. Schoenberg</i>	
§0 Introduction.	353
1 The differential operator $D^2 + 1$ .	354
2 The differential operator $D^2 - 1$ .	359
3 Weak extremum functions in Theorem 3.	364
 <b>Oscillatory Perfect Splines and Related Extremal Problems</b>	 <b>371</b>
<i>Samuel Karlin</i>	
§1 Introduction and statement of main results.	371
2 The construction of certain generalized perfect splines with special oscillatory properties.	385
3 Some special oscillatory perfect splines.	394
4 Uniqueness criteria, proof of Theorem 4.1 and related matters.	396
5 A special one parameter family of equi-oscillation perfect splines.	403
6 Results on equi-oscillating perfect splines with variable interval length.	412
7 Some symmetry considerations.	417
8 Some extremal properties of the equi-oscillating perfect splines.	418
9 Perfect L-splines.	423
10 Equi-oscillating perfect L-splines on $[0, \infty)$ and on $(-\infty, \infty)$ with an infinite number of knots.	426
11 Perfect L-splines for n-th order differential operators with constant coefficients on the half line and sharp Landau Kolmogorov type inequalities.	432
12 Equi-oscillating perfect L-splines for the full line where L is a differential operator with constant coefficients.	443
13 Landau Kolmogorov type inequalities for certain convolution operators.	453
 <b>Generalized Markov Bernstein Type Inequalities for Spline Functions</b>	 <b>461</b>
<i>Samuel Karlin</i>	
§1 Introduction and statement of main results.	461
2 Markov inequalities for perfect splines: Proof of Theorem 1.	469
3 Markov inequalities for one-sided and two-sided "Cardinal splines".	476

<b>Some One-sided Numerical Differentiation Formulae and Applications</b>	<b>485</b>
<i>Samuel Karlin</i>	
§0 Introduction.	485
1 The finite interval case.	486
2 The one-sided infinite interval case.	494
3 Remarks.	499
