CONTENTS

Chapter I. THE SPACE $L^2_{p(x)}$

1. The Problem 7
2. The Weight Function. The Space $L^2_{p(x)}$ 9
3. Convergence in Mean 11
4. Classes of Functions Dense in $L^2_{p(x)}$ 15

Chapter II. ORTHOGONAL SYSTEMS

1. Orthogonality. Examples 19
2. The FOURIER Coefficients 23
3. Completeness and Closedness 29

Chapter III. LINEARLY INDEPENDENT SYSTEMS OF FUNCTIONS

1. Linear Independence. The GRAM Determinant. The SCHMIDT Theorem 32
2. Approximation by Linearly Independent Functions 36
3. The MÜNTZ Theorems 40

Chapter IV. GENERAL PROPERTIES OF ORTHOGONAL POLYNOMIALS

1. Foundations 45
2. Roots of Orthogonal Polynomials. A Recursion Formula 50
3. Relation to the Theory of Continued Fractions 58
4. The CHRISTOFFEL-DARBOUX Formula. Convergence of Orthogonal Expansions. 66
5. Changing the Weight Function 74

Chapter V. THE LEGENDRE POLYNOMIALS

1. The RODRIGUES Formula 82
2. The Generating Function 88
3. The LAPLACE Integral 91
4. Expansions in Terms of LEGENDRE Polynomials 94

Chapter VI. THE JACOBI POLYNOMIALS

1. Generalization of the RODRIGUES Formula 102
2. The Recursion Formula, Generating Function, and Differential Equation 107
3. Estimates of the JACOBI Polynomials. The Expansion Problem. 109
4. TCHEBYSHEFF Polynomials of the Second Kind 114
5. The JACOBI Polynomials for $\alpha = \frac{1}{2}$, $\beta = -\frac{1}{2}$ 121

Chapter VII. THE MOMENT PROBLEM FOR FINITE INTERVALS

1. Formulation of the Problem 126
2. The Theorems of F. HAUSDORFF 130
3. Linear Functionals in C and L^2 136
4. Positive Definite Sequences 142

Chapter VIII. INFINITE INTERVALS

1. Introduction 147
2. The LAGUERRE Polynomials 151
3. The Generalized LAGUERRE Polynomials 153
4. The HERMITE Polynomials 156
5. The Moment Problem for Infinite Intervals 159
6. The FAVARD Theorem 167

Bibliography 171

Index 175

Index of Symbols 176
