Preface **v**

Introduction **1**

Chapter 1 Periodic Functions **13**

Definitions; integrals of periodic functions; periodic extensions; definition of Fourier coefficients and Fourier series; real trigonometric form; Fourier coefficients of a uniformly convergent Fourier series; mean-square approximation by partial sums of Fourier series, Bessel's inequality; Parseval's equality; (mean-square approximation with orthogonal polynomials)

Chapter 2 The Cesaro Sum **20**

Sequence of averages; convergence of sequence of averages of a convergent sequence; convergence of the Cesaro sum of a convergent series; Abel sum; convergence of the Abel sum of a convergent series; (divergent series with first Cesaro and Abel sum which are equal; divergent series with Abel sum, but with divergent Cesaro sum)

Chapter 3 The General Question 25

Determination of a function by its Fourier coefficients; kernel sequences; application to functions having right-hand and left-hand limits; Fejer kernels; Fejer theorem; Fourier series of a continuous function; uniqueness theorem for continuous functions; Weierstrass approximation theorem; Poisson kernels; Abel sum of Fourier series; (partial-differential equation satisfied by Poisson kernel; Poisson representation of solution of $\nabla^2\psi = g$ in circle where $\psi = 0$ on boundary)

Chapter 4 Mean-square Convergence 36

Definition of mean-square limit; convolution of continuous periodic functions; Parseval's equality for continuous functions; extension of proof to piecewise-continuous functions; Cauchy-Schwartz inequality; Fourier series of a function with piecewise-continuous derivative

Chapter 5 The First-order Linear Equation with Constant Coefficients 43

Fourier coefficients of periodic solution; (periodic solution of homogeneous equation with periodic coefficient); extension to higher-order equations

Chapter 6 The Fourier Integral 48

Definition of Fourier transform; definition of Fourier integral; Cesaro summation of improper integrals; Abel summation of improper integrals; evaluation of $\int_0^\infty (\sin x/x) dx$; Fejer theorem for Fourier integrals; Parseval's equality; statement of Parseval's theorem; Fourier integral of function with piecewise-continuous derivative; (Fourier transform of derivative of functions; inequality satisfied by second moments of function and its Fourier transform; representation of solution of $\nabla^2 f = 0$ in half-plane; initial-value problem for wave equation; solution of heat equation on infinite interval)

Chapter 7 Generalized Fourier Series 59

Definitions of inner product; orthonormal sequences; generalized Fourier coefficients; norm; Bessel's inequality; Parseval's equality; complete orthonormal sequences; complete classes of functions; definition of Legendre polynomials; differential equation for $P_n(x)$; (differential equation for $P_n(\cos \theta)$); $\sqrt{n + \frac{1}{2}} P_n(x)$ as an orthonormal sequence; ($\sqrt{n + \frac{1}{2}} P_n(\cos \theta)$ as an orthonormal sequence); representation of continuous functions; (generalized Fourier series for solutions of $\nabla^2 f = 0$ which are independent of the spherical coordinate ϕ ; $\nabla^2 f + k^2 f = 0$; differential equation for $P_n^{\nu}(x)$; associated Legendre polynomials as an orthonormal sequence; representation of solutions of the wave equation; Fourier transforms which are zero outside a finite interval; representation using sampling functions; sampling functions as an orthonormal sequence)

Chapter 8 The Sturm-Liouville Problem 70

Statement of problem; (problem arising from heat equation; problem arising from $C^2 \partial^2 u / \partial x^2 - \partial^2 u / \partial t^2 = 0$; problem arising from $\nabla^2 u + k^2 u = 0$; $\nabla^2 u = 0$ on a circular sector); proof that characteristic values are real and bounded from below; (characteristic values as obtained by calculus of variations); restatement of problem as an integral equation; properties of integral equation; Azela's theorem; construction of characteristic values and functions; the fundamental theorem, completeness of the characteristic functions in the class

of functions having continuous second derivatives and which satisfy the boundary conditions and representation of solution of inhomogeneous problem; representation of characteristic values λ_n and characteristic functions y_n for large n .

Chapter 9 The Bessel Functions 99

The Bessel equation, properties of solutions; zeros of $J_0(r)$ and the related Sturm-Liouville problem; [the Sturm-Liouville problem for $J_n(x)$]; asymptotic values for the zeros

Appendix A Continuum Dynamics 111

Appendix B Electromagnetic Theory 127

Appendix C The Heat Equation 143
