
CONTENTS

PREFACE	vii
Chapter I Introduction	
1.1. What Is a Spline?	1
1.2. Recent Developments in the Theory of Splines	2
Chapter II The Cubic Spline	
2.1. Introduction	9
2.2. Existence, Uniqueness, and Best Approximation	16
2.3. Convergence	19
2.4. Equal Intervals	34
2.5. Approximate Differentiation and Integration.	42
2.6. Curve Fitting	50
2.7. Approximate Solution of Differential Equations	52
2.8. Approximate Solution of Integral Equations	57
2.9. Additional Existence and Convergence Theorems	61
Chapter III Intrinsic Properties of Cubic Splines	
3.1. The Minimum Norm Property	75
3.2. The Best Approximation Property	77
3.3. The Fundamental Identity	78
3.4. The First Integral Relation	79
3.5. Uniqueness	82
3.6. Existence.	84
3.7. General Equations	84
3.8. Convergence of Lower-Order Derivatives	87
3.9. The Second Integral Relation	89
3.10. Raising the Order of Convergence	91
3.11. Convergence of Higher-Order Derivatives	93
3.12. Limits on the Order of Convergence	95
3.13. Hilbert Space Interpretation	97
3.14. Convergence in Norm	98
3.15. Canonical Mesh Bases and Their Properties	101
3.16. Remainder Formulas.	103
3.17. Transformations Defined by a Mesh	105
3.18. A Connection with Space Technology	107

Chapter IV **The Polynomial Spline**

4.1. Definition and Working Equations	109
4.2. Equal Intervals	124
4.3. Existence.	132
4.4. Convergence	135
4.5. Quintic Splines of Deficiency 2, 3	143
4.6. Convergence of Periodic Splines on Uniform Meshes	148

Chapter V **Intrinsic Properties of Polynomial Splines of Odd Degree**

5.1. Introduction	153
5.2. The Fundamental Identity	154
5.3. The First Integral Relation	155
5.4. The Minimum Norm Property	156
5.5. The Best Approximation Property	157
5.6. Uniqueness	159
5.7. Defining Equations	160
5.8. Existence.	165
5.9. Convergence of Lower-Order Derivatives	166
5.10. The Second Integral Relation	168
5.11. Raising the Order of Convergence	170
5.12. Convergence of Higher-Order Derivatives	172
5.13. Limits on the Order of Convergence	174
5.14. Hilbert Space Interpretation	174
5.15. Convergence in Norm	176
5.16. Canonical Mesh Bases and Their Properties	179
5.17. Kernels and Integral Representations	182
5.18. Representation and Approximation of Linear Functionals	185

Chapter VI **Generalized Splines**

6.1. Introduction	191
6.2. The Fundamental Identity	192
6.3. The First Integral Relation	193
6.4. The Minimum Norm Property	195
6.5. Uniqueness	196
6.6. Defining Equations	197
6.7. Existence.	199
6.8. Best Approximation	200
6.9. Convergence of Lower-Order Derivatives	201
6.10. The Second Integral Relation	204
6.11. Raising the Order of Convergence	206
6.12. Convergence of Higher-Order Derivatives	208
6.13. Limits on the Order of Convergence	211
6.14. Hilbert Space Interpretation	213
6.15. Convergence in Norm	216
6.16. Canonical Mesh Bases	219

6.17. Kernels and Integral Representations	220
6.18. Representation and Approximation of Linear Functionals	221

Chapter VII **The Doubly Cubic Spline**

7.1. Introduction	235
7.2. Partial Splines	237
7.3. Relation of Partial Splines to Doubly Cubic Splines	238
7.4. The Fundamental Identity	240
7.5. The First Integral Relation	242
7.6. The Minimum Norm Property	242
7.7. Uniqueness and Existence	243
7.8. Best Approximation	244
7.9. Cardinal Splines	245
7.10. Convergence Properties	247
7.11. The Second Integral Relation	248
7.12. The Direct Product of Hilbert Spaces	249
7.13. The Method of Cardinal Splines	251
7.14. Irregular Regions	254
7.15. Surface Representation	258
7.16. The Surfaces of Coons	262

Chapter VIII **Generalized Splines in Two Dimensions**

8.1. Introduction	265
8.2. Basic Definition	266
8.3. The Fundamental Identity	267
8.4. Types of Splines	269
8.5. The First Integral Relation	270
8.6. Uniqueness	271
8.7. Existence	272
8.8. Convergence	274
8.9. Hilbert Space Theory	275
