CONTENTS

Chapter 1. Preliminaries 1

1.1 Introduction 1

1.2 Chebyshev Systems 1

1.3 Classes of Functions 3

1.4 Fourier Series 7

1.5 Degree of Approximation of Functions 11

1.6 Approximation of Classes of Functions 14

1.7 Characterization of Classes of Functions in Terms of Fourier Coefficients 16

1.8 A Representation for Trigonometric Polynomials 17

1.9 Orthogonal Polynomials and Quadrature Formulae 17

1.10 Splines 20

Chapter 2. Fundamental Approximation Properties of Positive Linear Operators 22

2.1 Introduction 22

2.2 The Bohman-Korovkin Theorems 27

2.3 Quantatative Estimates 28

2.4 Convolution Operators 32

2.5 Estimates for the Fejér, Jackson, and Landau Operators . . . 35

2.6 Finer Estimates for Twice Differentiable Functions 39

2.7 Estimates for Bernstein Operators 41

2.8 Estimates for the Hermite-Fejér Operators 42

2.9 Estimates for Variation Diminishing Splines 44

2.10 Notes 46

Chapter 3. Saturation of Convolution Operators 48

3.1 Introduction 48

3.2 Two Simple Examples 51

3.3 A Necessary and Sufficient Condition for Positive Convolution to be Saturated 55

3.4 An Example of a Non-saturated Sequence of Positive Convolution Operators 58

3.5 Direct and Inverse Theorems for Characterizing the Saturation Class 59

3.6 Saturation of the Fejér Operators and the Typical Means of the Fourier Series 64

3.7 Tureckiĭ's Theorem 68

3.8 Examples when the Direct Theorem Does Not Hold 70

3.9 Equivalent Formulations of Tureckiĭ's Theorem 76

3.10 Applications of Tureckiĭ's Theorem 79

3.11 Generalizations of Tureckiĭ's Theorem 82

3.12 Characterization of the Saturation Class when the Saturation Order is $(1-\rho_{m.n})$ 89

3.13 Notes 97

Chapter 4. Trigonometric Polynomial Operators 103

4.1 Introduction 103

4.2 Examples of Optimal Sequences 105

4.3 Saturation of Optimal Sequences 108

4.4 Quasi-optimal Sequences 113

4.5 Non-optimal Sequences 115

4.6 Notes 119

Chapter 5. Saturation in C[a,b] 121

5.1 Introduction 121

5.2 Saturation in C[a,b] 122

5.3 The Parabola Technique 124

5.4 A Local "o" Saturation Theorem 128

5.5 The Saturation Class 133

5.6 The Saturation Class for Local Saturation 142

5.7 Pointwise Saturation 145

5.8 More General Pointwise Saturation Theorems 153

5.9 An Example 164

5.10 Notes 167

Chapter 6. Algebraic Polynomial Operators 170

6.1 Introduction 170

6.2 Examples of Optimal Sequences 172

6.3 Local Estimates for Positive Polynomial Operators 184

6.4 A "o" Saturation Theorem for Optimal Sequences 195

6.5 Notes 203

Chapter 7. Approximation of Classes of Functions 205

7.1 Introduction 205

7.2 Approximation of Classes of Functions for Convolution Operators 207

7.3 Some Examples 212

7.4 Approximation of Classes for C[a,b] 218

7.5 Connections between the Degree of Approximation and the Modulus of Continuity 226

7.6 Notes 237

Chapter 8. Inverse Theorems 238

8.1 Introduction 238

8.2 Inverse Theorems for Operators Which Satisfy Bernstein Type Inequalities 242

8.3 Inverse Theorems for Positive Convolution Operators 250

8.4 Examples 264

8.5 Inverse Theorems for the Bernstein Operators 267

8.6 Notes 276

References 278
