Contents

Part I Control of Nonholonomic Systems

1 Modelling and Trajectory Generation of Lighter-Than-Air Aerial Robots – Invited Paper
Yasmina Bestaoui, Salim Hima 3
1.1 Introduction 3
1.2 Airship Modelling 4
1.2.1 Kinematics 4
1.2.2 Dynamics 6
1.3 Trajectory Generation 9
1.3.1 Trim Trajectories 10
1.3.2 Trim Trajectory Characterization 10
1.3.3 Trim Trajectories Calculation 12
1.4 Simulation Results 14
1.4.1 Straight Forward Trim Flight 15
1.4.2 Circular Trim Trajectories with Constant Altitude 15
1.4.3 Helicoidal Trim Trajectories 17
1.4.4 Under-Actuation at Low Velocity 18
1.4.5 Results for the Normalized Time 23
1.5 Conclusions 26
References 26

2 Control of 3 DOF Quadrotor Model
Tae Soo Kim, Karl Stol, Vojislav Kecman 29
2.1 Introduction 29
2.2 Modelling of Quadrotor 30
2.3 Experimental Setup 32
2.4 Control Design 32
2.4.1 Optimal Control (LQR) 32

2.4.2 LQR with Gain Scheduling 33
2.4.3 Feedback Linearization 34
2.4.4 Sliding Mode Control 35
2.5 Simulations 35
2.6 Conclusions 37
References 37

3 Internal Model Control-Based Adaptive Attitude Tracking
Ahmed Al-Garni, Ayman Kassem, Muhammad Shafiq, Rihan Ahmed 39
3.1 Introduction 39
3.2 Spacecraft Model 40
3.3 Problem Statement 41
3.4 Controller Design 41
3.4.1 Plant Stabilization 41
3.4.2 PID Controller Design for the Stabilized Plant 43
3.5 Adaptive Controller Design 44
3.5.1 Internal Model Control – System Operation 44
3.5.2 Simulation Results 46
3.6 Conclusion 47
References 47

4 Tracking control of Automated Guided Vehicles
Lotfi Beji, Azgal Abichou 49
4.1 Introduction 49
4.2 Modelling 50
4.3 Simulation results 54
4.4 Conclusions 55
References 55

5 VFO Control for Mobile Vehicles in the Presence of Skid Phenomenon
Maciej Michałek 57
5.1 Introduction 57
5.2 Problem Formulation 58
5.2.1 Skid Phenomenon 59
5.3 VFO Controller 60
5.3.1 VFO Strategy – Brief Recall 60
5.3.2 VFO Control with Skid Compensation 61
5.3.3 Skid Computation 64
5.4 Simulation Results 64

5.5 Concluding Remarks 66
References 66

Part II Vision-Based Control

6 Vision-Based Dynamic Velocity Field Generation for Mobile Robots
W. Medina-Meléndez, L. Fermín, J. Cappelletto, C. Murrugarra, G. Fernández-López, J.C. Grieco 69
6.1 Introduction 69
6.2 Problem Overview 70
6.3 Dynamic Velocity Field Generation 70
6.3.1 Vision System 70
6.3.2 Initial Velocity Field Generation 72
6.3.3 Dynamic Velocity Field Modification 74
6.4 Results 75
6.5 Conclusions and Future Work 78
References 78

7 Zoom Control to Compensate Camera Translation within a Robot Egomotion Estimation Approach
Guillem Alenyà, Carme Torras 81
7.1 Introduction 81
7.2 Mapping Contour Deformations to Camera Motions 82
7.3 Generating Zoom Demands 84
7.4 Control and Egomotion Algorithm 85
7.5 Experimental Results 85
7.6 Conclusions and Future Work 87
References 88

8 Two-Finger Grasping for Vision Assisted Object Manipulation
Umar Khan, Thomas Nierobisch, Frank Hoffmann 89
8.1 Introduction 89
8.2 Visual Servoing with a Dynamic Set of SIFT Features 90
8.3 Grasp Point Selection 92
8.4 Experimental Results 95
8.5 Conclusion 97
References 98

9 Trajectory Planning with Control Horizon Based on Narrow Local Occupancy Grid Perception
Lluis Pacheco, Ningsu Luo 99
9.1 Introduction 99
9.2 Local Perception Horizon and Trajectory Planning 100
9.3 A Practical Approach to WMR with Monocular Image Data 101
9.3.1 Image Perception and Physical Constraints 102
9.3.2 Dynamic Models and Trajectory Control 103
9.4 Conclusions 105
References 106

Part III New Control Algorithms for Robot Manipulators

10 Control for a Three-Joint Underactuated Planar Manipulator – Interconnection and Damping Assignment Passivity-Based Control Approach
Masahide Ito, Naohiro Toda 109
10.1 Introduction 109
10.2 IDA-PBC for Underactuated Mechanical Systems 110
10.3 Control of a $2R_a$-R_u Planar Manipulator by IDA-PBC 112
10.3.1 PH Representation of Dynamics 112
10.3.2 Applicability of IDA-PBC and Derivation of Control Law 113
10.4 Numerical Experiments 115
10.5 Conclusions 116
References 117

11 A New Control Algorithm for Manipulators with Joint Flexibility
Piotr Sauer, Krzysztof Kozłowski 119
11.1 Introduction 119
11.2 A new Adaptive Control Algorithm 120
11.2.1 Mathematical Description of the System 120
11.2.2 The New Control Algorithm 121
11.3 Concluding Remarks 133
References 133

12 An Inverse Dynamics-Based Discrete-Time Sliding Mode Controller for Robot Manipulators
Andrea Calanca, Luca M. Capisani, Antonella Ferrara, Lorenza Magnani 137

12.1 Introduction 137
12.2 The Considered Dynamical Model 138
12.3 The Inverse Dynamics Method 139
12.4 A Discrete-Time Sliding Mode Control Approach 139
12.5 An Alternative Discrete-Time Sliding Mode Control Approach 141
12.6 Experimental Verification 143
12.6.1 The Considered Industrial Robot 143
12.6.2 Experimental Results 144
12.7 Conclusions 145
References 145

13 Velocity Tracking Controller for Rigid Manipulators
Przemysław Herman, Krzysztof Kozłowski 147
13.1 Introduction 147
13.2 First-order Equations of Motion Containing GVC 148
13.3 Velocity Tracking Controller Using GVC 149
13.4 Simulation results 153
13.5 Concluding Remarks 154
References 155

14 Fixed Point Transformations-Based Approach in Adaptive Control of Smooth Systems
József K. Tar, Imre J. Rudas,, Krzysztof R. Kozłowski 157
14.1 Introduction 157
14.2 Simple Iterative Approaches 159
14.3 Novel Iterative Approaches for SISO Systems 161
14.4 The Mathematical Model of the Cart – Pendulum System and Simulation Results 162
14.5 Conclusion 164
14.6 Acknowledgment 165
References 165

15 Driving Redundant Robots by a Dedicated Clutch-Based Actuator
Anani Ananiev, Thorsten Michelfelder, Ivan Kalaykov 167
15.1 Introduction 167
15.2 New Method of Actuating Hyper-Redundant Robots 168
15.3 Modeling Magnetic Clutch-Based Actuators 170
15.4 Controller Design, Simulation and Experiments 173
15.5 Conclusions 174
References 175

16 An Energy-Based Approach Towards Modeling of Mixed Reality Mechatronic Systems
Yong-Ho Yoo 177
16.1 Introduction 177
16.2 Mixed Reality Bond Graphs 178
16.3 Distributed Mixed Reality Haptic Ball Manipulator 179
16.4 Conclusion 184
References 184

Part IV New Trends in Kinematics and Localization Methods

17 Navigation of Autonomous Mobile Robots – Invited Paper
J.Z. Sasiadek, Y. Lu, V. Polotski 187
17.1 Introduction 187
17.1.1 Mapping and Localization 187
17.1.2 Sensor Fusion 189
17.1.3 Collision Avoidance 189
17.1.4 Trajectory Tracking 189
17.2 Mobile Robot Navigation Through Gates 190
17.2.1 Problem Description 191
17.2.2 Gate Identification Procedure and Signature Concept 192
17.2.3 Experimental Procedure 197
17.2.4 Control System 202
17.2.5 Results and Discussion 203
17.3 Conclusions 206
References 207

18 Kinematic Motion Patterns of Mobile Manipulators
Katarzyna Zadarnowska, Krzysztof Tchoń 209
18.1 Introduction 209
18.2 Main Idea 210
18.3 Kinematic Motion Patterns 211
18.4 Examples 214
18.5 Conclusion 216
References 216

19 Generalized Kinematic Control of Redundant Manipulators
Mirosław Galicki 219
19.1 Introduction 219

19.2 Kinematic Control of Redundant Manipulator 220
19.3 Tackling the Problem of Manipulator Singularity 223
19.4 Computer Example 224
19.5 Conclusions 225
References 226

20 Parametric Representation of the Environment of a Mobile Robot for Measurement Update in a Particle Filter
Tahir Yaqub, Jayantha Katupitiya 227
20.1 Introduction and Related Work 227
20.2 Preliminaries: Particle Filter 229
20.3 Feature Selection 230
20.3.1 Definition of Features and Other Parameters 230
20.3.2 Data Collection 231
20.3.3 Statistical Analysis and Bootstrap Feature Selection 231
20.4 Multinomial Formulation 233
20.4.1 Extracting the Multinomial Parameters 233
20.4.2 Measurement Update 233
20.5 Experiments and Results 234
20.5.1 Setup and Scenarios for Data Collection 234
20.5.2 Model Extraction and Results Updates 234
20.6 Conclusion and Future Work 235
References 236

21 Simulation of a Mobile Robot with an LRF in a 2D Environment and Map Building
Luka Teslić, Gregor Klančar, Igor Škrjanc 239
21.1 Introduction 239
21.2 Simulator 240
21.2.1 Robot Model 241
21.2.2 Environment Model 241
21.2.3 Laser Range-Finder Model 241
21.3 Mapping Algorithm 243
21.3.1 Integrating the Global Map with the Local Map ... 243
21.4 Results 245
21.5 Conclusion 246
References 246

Part V Trajectory Planning Issues for Nonholonomic Systems

22 Lie Algebraic Approach to Nonholonomic Motion Planning in Cluttered Environment
Pawel Ludwików, Ignacy Dulęba 249
22.1 Introduction 249
22.2 Preliminaries 251
22.3 The Algorithm 252
22.4 Simulation Results 255
22.5 Conclusions 257
References 257

23 Computationally Efficient Path Planning for Wheeled Mobile Robots in Obstacle Dense Environments
Husnu Türker Şahin, Erkan Zergeroğlu 259
23.1 Introduction 259
23.2 Kinematic Model and Problem Formulation 260
23.3 The Proposed Path Planner 261
23.3.1 Nonholonomic Steering Towards a Desired Target . 261
23.3.2 Obstacle Detection and Avoidance 262
23.3.3 Extension for Large U-Blocks and Complicated Tunnels 264
23.4 Simulation Results 264
23.5 Conclusions 267
References 267

24 Piecewise-Constant Controls for Newtonian Nonholonomic Motion Planning
Ignacy Dulęba 269
24.1 Introduction 269
24.2 The Newton Algorithm 270
24.3 Simultion Results 274
24.4 Conclusions 277
References 277

25 Path Following for Nonholonomic Mobile Manipulators
Alicja Mazur 279
25.1 Introduction 279
25.2 Mathematical Model of Nonholonomic Mobile Manipulator of Type (nh, h) 280

25.2.1 Nonholonomic Constraints ... 280
25.2.2 Dynamics of Mobile Manipulator with Nonholonomic Platform ... 280
25.3 Control Problem Statement ... 282
25.4 Path Following for the Platform ... 283
25.4.1 Kinematic Controller – Pomet Algorithm ... 284
25.5 Path Following for the Manipulator ... 286
25.6 Dynamic Controller ... 287
25.7 Simulation Study ... 289
25.8 Conclusions ... 291
References ... 292

Part VI Rehabilitation Robotics

26 On Simulator Design of the Spherical Therapeutic Robot Koala
Krzysztof Arent, Marek Wnuk ... 295
26.1 Introduction ... 295
26.2 KOALA: Therapeutic Ball-robot ... 296
26.3 Virtual KOALA and Sensory Signals Modelling ... 298
26.4 Implementation Issues ... 300
26.5 Conclusions ... 301
References ... 302

27 Development of Rehabilitation Training Support System using 3D Force Display Robot
Yoshifumi Morita, Akinori Hirose, Takashi Uno, Masaki Uchida, Hiroyuki Ukai, Nobuyuki Matsui ... 303
27.1 Introduction ... 303
27.2 Rehabilitation Training Support System ... 304
27.3 3D Force Display Robot ... 305
27.4 Control Algorithms of Rehabilitation Training ... 306
27.4.1 Control Algorithm of Resistance Training ... 306
27.4.2 Control Algorithm Simulating Sanding Training ... 307
27.4.3 Teaching/training Function Algorithm ... 308
27.5 Conclusions ... 310
References ... 310

28 Applying CORBA Technology for the Teleoperation of Wheeeler
Michał Pytasz, Grzegorz Granosik ... 311
28.1 Introduction ... 311

28.2 Presentation of Wheeeler 311
28.2.1 The Main Concept 312
28.2.2 Distributed Controllers 313
28.3 Client-Server Communication 314
28.3.1 Short Review 314
28.3.2 CORBA Implementation 315
28.4 Simulation Time and Real Time Considerations 317
28.5 Further Developments 318
References 318

Part VII Humanoid Robots

29 Educational Walking Robots
Teresa Zielińska, Andrzej Chmielniak, Lukasz Jańczyk 321
29.1 Introduction 321
29.2 Educational Walking Robots – Mechanical Structures 322
29.2.1 Hexapod 322
29.2.2 Quadruped 323
29.3 New Control System 325
29.4 Experiments 326
29.5 Conclusions 327
References 328

30 Humanoid Binaural Sound Tracking Using Kalman Filtering and HRTFs
Fakheredine Keyrouz, Klaus Diepold, Shady Keyrouz 329
30.1 Introduction 329
30.2 Previous Localization Technique 331
30.3 Enhanced Localization Algorithm 332
30.4 Kalman Filtering and ROI Extraction 334
30.5 Simulation and Experimental Results 335
30.5.1 Stationary Sound Sources 335
30.5.2 Moving Sound Sources 338
30.6 Conclusion 339
References 340

31 Mechatronics of the Humanoid Robot ROMAN
Krzysztof Mianowski, Norbert Schmitz, Karsten Berns 341
31.1 Introduction 341
31.2 The Humanoid Robot ROMAN 342
31.3 Design Concept and Construction 398
31.3.1 Upper Body 398

31.3.2 Artificial Eyes 345
31.3.3 Neck 346
31.4 Robot Control Architecture 346
31.5 Conclusion and Outlook 348
References 348

Part VIII Applications of Robotic Systems

32 Assistive Feeding Device for Physically Handicapped Using Feedback Control
Rahul Pandhi, Sumit Khurana 351
32.1 Introduction 351
32.2 Upper Arm Orthotic – Mobile Mount 352
32.2.1 Slave Arm Unit 353
32.2.2 Master/Interface Unit 353
32.2.3 Transmission System 354
32.2.4 Control System 354
32.2.5 Advantages 355
32.3 Upper Arm Orthotic – Stationary Mount 355
32.4 Power-Assist in Human Worn Assistive Devices 356
32.5 Virtual Prototyping 357
32.6 Conclusion 358
References 359

33 Design and Control of a Heating-Pipe Duct Inspection Mobile Robot
Piotr Dutkiewicz, Michał Kowalski, Bartłomiej Krysiak, Jarosław Majchrzak, Mateusz Michalski, Waldemar Wróblewski .. 361
33.1 Introduction 361
33.2 Chassis Structure 362
33.2.1 Supporting Frame and Suspension 363
33.2.2 Driving System 364
33.2.3 Steering system 364
33.3 Control System Concept and Implementation 364
33.4 On-board Controller 367
33.5 Energy Distribution Module 369
33.6 Conclusion 370
References 370

34 Measurement and Navigation System of the Inspection Robot RK-13
Piotr Dutkiewicz, Marcin Kiełczewski, Dariusz Pazderski, Waldemar Wróblewski 371
34.1 Introduction 371
34.2 Measurement and Control System Modules 372
34.2.1 Communication System – Hardware Layer 372
34.2.2 Measurement System 373
34.2.3 Vision System for Inspection and Navigation 376
34.3 Localization of the Duct Inspection Robot with Use of the Vision System 377
34.4 Conclusions 380
References 380

35 Architecture of Multi-Segmented Inspection Robot KAIRO-II
C. Birkenhofer, K. Regenstein, J.-M. Zöllner, R. Dillmann 381
35.1 Introduction 381
35.2 System 382
35.2.1 Robot 383
35.2.2 Control Architecture: UCoM(Universal Controller Module) 384
35.2.3 Hybrid Impedance Control 385
35.2.4 Sensors 386
35.3 Integration and Results 387
35.4 Conclusion 388
References 388

36 The Project of an Autonomous Robot Capable to Cooperate in a Group
Tomasz Buratowski, Tadeusz Uhl, Grzegorz Chmaj 391
36.1 Introduction 391
36.2 The 2-wheeled Mobile Robot Description 392
36.2.1 The Basic Assumptions Related to Model Kinematics 392
36.2.2 The Basic Assumptions Related to Path Planning . 392
36.3 Conclusions 398
References 398

37 End-Effector Sensors' Role in Service Robots
Cezary Zieliński, Tomasz Winiarski, Krzysztof Mianowski, Andrzej Rydzewski, Wojciech Szynkiewicz 401
37.1 Introduction 401
37.2 Robot Controller 403
37.3 Position-Force Control 405
37.4 The Gripper and Its Sensors 407
37.5 Effector Controller 408
37.6 Experiments 410
37.7 Conclusions 411
References 412

Part IX Multiagent Systems

38 Detecting Intruders in Complex Environments with Limited Range Mobile Sensors
Andreas Kolling, Stefano Carpin 417
38.1 Introduction 417
38.2 Related Work 418
38.3 The Algorithm 419
38.3.1 Weighted Graph Clearing 420
38.3.2 Weighted Tree Clearing 420
38.4 Investigation of Performance 423
38.5 Discussion and Conclusion 423
References 424

39 High-level Motion Control for Workspace Sharing Mobile Robots
Elżbieta Roszkowska 427
39.1 Introduction 427
39.2 Problem Statement 427
39.3 Deterministic Finite State Automata 429
39.4 Discretization of Robot Motion Processes 429
39.5 DFSA Model of Distributed High-Level Control 431
39.6 Coordination of Multiple Robot Motion 433
39.7 Deadlock Avoidance 434
39.8 Conclusion 435
References 435

40 Urban Traffic Control and Path Planning for Vehicles in Game Theoretic Framework
István Harmati 437
40.1 Introduction 437
40.2 The Traffic Model 438
40.3 Urban Traffic Control 439
40.4 Path Planning Algorithms for Vehicles 441
40.5 Conclusions 443
References 443

41 A Low-Cost High Precision Time Measurement Infrastructure for Embedded Mobile Systems
Kemal Köker, Kai-Steffen Hielscher, Reinhard German 445
41.1 Introduction and Overview 445
41.2 Architecture of the Application 446
41.2.1 Robocup F-180 Small Size League 446
41.3 Time Synchronisation with GPS 447
41.3.1 Existing Infrastructure 447
41.3.2 PPS-API 448
41.3.3 Wireless Dissemination of Time Signal 448
41.4 Measurements 449
41.4.1 Results of First Test Run 449
41.4.2 Techniques for Improvement 450
41.5 Conclusion 451
