PREFACE	iii
INTRODUCTION	1
PART I. METHODS FOR SOLVING ORDINARY DIFFERENTIAL EQUATIONS	7
A. THE DIFFERENTIAL EQUATION IS OF FIRST ORDER	8
A1. <i>The Equation Is of First Order and of First Degree</i>	9
1. Separable Variables	10
2. The Linear Equation	13
3. The Riccati Equation	15
4. The Abel Equation	23
5. The Bernoulli Equation	26
6. Equations Linear in the Variables	27
7. The Exact Equation and the Integrating Factor	28
8. Homogeneous Equations and Related Types	34
9. Change of Variable	40
10. The General Equation of First Order and First Degree	43
11. Series Solution	46
12. Solution as an Integral Equation	53
13. Approximate Methods	54
A2. <i>The Equation Is of First Order and of Second or Higher Degree</i>	58
1. Missing Variables	59
2. No Missing Variables	61
3. Homogeneous Equations and Related Types	63
4. Clairaut's Equation and Related Types	65
5. The Method of Lagrange	66
6. Change of Variable	66
7. The General Equation	67
8. $X_0(x,y)p^m + X_1(x,y)p^{m-1} + \dots + X_m(x,y) = 0$	68
9. $p^m + f_1(x,y)p^{m-1} + \dots + f_{m-1}(x,y)p + f_m(x,y) = 0$	70
10. Singular Solutions	74
11. The Equation Is Transcendental in dy/dx	80

B.	THE DIFFERENTIAL EQUATION IS OF SECOND ORDER	81
B1.	<i>The Linear Equation of Second Order</i>	82
	1. The Linear Homogeneous Equation with Constant Coefficients	84
	2. The Linear Homogeneous Equation with Variable Coefficients	85
	3. Equations Reducible to Type 1	86
	4. Transformations of the Linear Equation	87
	5. The Exact Equation	92
	6. Resolution of Operators	94
	7. Solution of the Equation in Infinite Form	95
	8. Series Solution	96
	9. Equations of Standard Type	108
	10. Integral Solution	138
	11. Continued Fraction Solution	144
	12. The Linear Nonhomogeneous Equation	145
B2.	<i>The Nonlinear Equation of Second Order</i>	158
	1. The Dependent Variable Is Missing	158
	2. The Independent Variable Is Missing	159
	3. Homogeneous Equations	161
	4. The Exact Nonlinear Equation	164
	5. Change of Variable	166
	6. The General Nonlinear Equation of Second Order	166
	7. The Equation with Fixed Critical Points	166
	8. The Equation with Fixed Critical Points, Rational in y	168
	9. Painlevé Equations	183
	10. The Equation with Fixed Critical Points, Algebraic in y	185
	11. Singular Solutions	186
C.	THE DIFFERENTIAL EQUATION IS OF ORDER GREATER THAN TWO	188
C1.	<i>The Linear Equation of Order Greater Than Two</i>	190
	1. The Linear Homogeneous Equation with Constant Coefficients	191
	2. The Linear Homogeneous Equation with Variable Coefficients	192
	3. Equations Reducible to Type 1	193
	4. Transformations of the Equation	194
	5. The Exact Equation	196
	6. Series Solution	200
	7. Fuchsian Equations and Others with Special Properties	210

8. Integral Solutions	213
9. The Linear Nonhomogeneous Equation	215
C2. <i>The Nonlinear Equation of Order Greater Than Two</i>	217
1. The Dependent Variable Is Missing	217
2. The Independent Variable Is Missing	218
3. Homogeneous Equations	220
4. The Exact Nonlinear Equation	221
5. Other Procedures	222
PART II. TABLES OF DIFFERENTIAL EQUATIONS AND THEIR SOLUTIONS	223
1. The Differential Equation Is of First Order and of First Degree	224
2. The Differential Equation Is of First Order and of Second or Higher Degree	278
3. The Differential Equation Is Linear and of Second Order	311
4. The Nonlinear Equation of Second Order	380
5. The Equation Is Linear and of Order Greater than Two	410
6. The Equation Is Nonlinear and of Order Greater than Two	427
INDEX OF EQUATION TYPES	431
BIBLIOGRAPHY	436
INDEX	443
