CONTENTS

1 Partial Differentiation 1

§1. Introduction 1

1.1: Partial derivatives, 2. 1.2: Implicit functions, 2. 1.3: Higher order derivatives, 3.

§2. Functions of One Variable 6

2.1: Limits and continuity, 6. 2.2: Derivatives, 8. 2.3: Rolle's theorem, 9. 2.4: Law of the mean, 9.

§3. Functions of Several Variables 11

3.1: Limits and continuity, 12. 3.2: Derivatives, 13. 3.4: Composite functions, 14. 3.5: Further cases, 16. 3.6: Differentiable functions, 16.

§4. Homogeneous Functions. Higher Derivatives 19

4.1: Definition of homogeneous functions, 19. 4.2: Euler's theorem, 20. 4.3: Higher derivatives, 21.

§5. Implicit Functions 23

5.1: Differentiation of implicit functions, 24. 5.2: Other cases, 25. 5.3: Higher derivatives, 25.

§6. Simultaneous Equations. Jacobians 27

6.1: Two equations in two unknowns, 27. 6.2: Jacobians, 28. 6.3: Further cases, 29. 6.4: The inverse of a transformation, 29.

§7. Dependent and Independent Variables 33

7.1: First illustration, 33. 7.2: Second illustration, 34. 7.3: Third illustration, 34.

§8. Differentials. Directional Derivatives 36

8.1: The differential, 37. 8.2: Meaning of the differential, 38. 8.3: Directional derivatives, 39. 8.4: The gradient, 40.

§9. Taylor's Theorem 43

9.1: Functions of a single variable, 43. 9.2: Functions of two variables, 44.

§10. Jacobians 48

10.1: Implicit functions, 48. 10.2: The inverse of a transformation, 48. 10.3: Change of variable, 50.

1 Partial Differentiation (Continued)

§11. Equality of Cross Derivatives 52

11.1: A preliminary result, 52. 11.2: The principal result, 52. 11.3: An example, 53.

§12. Implicit Functions 55

12.1: The existence theorem, 55. 12.2: Functional dependence, 57. 12.3: A criterion for functional dependence, 58. 12.4: Simultaneous equations, 59.

2 Vectors 62

§1. Introduction 62

1.1: Definition of a vector, 62. 1.2: Algebra of vectors, 63. 1.3: Properties of the operations, 64. 1.4: Sample vector calculations, 64.

§2. Solid Analytic Geometry 66

2.1: Syllabus for solid geometry, 66. 2.2: Comments on the syllabus, 67. 2.3: Vector applications, 69.

§3. Space Curves 70

3.1: Examples of curves, 71. 3.2: Specialized curves, 72.

§4. Surfaces 75

4.1: Examples of surfaces, 75. 4.2: Specialized surfaces, 76.

§5. A Symbolic Vector 79

5.1: Definition of $\vec{\nabla}$, 79. 5.2: Directional derivatives, 81. 5.3: Meaning of the gradient, 81.

§6. Invariants 84

6.1: Change of axes, 84. 6.2: Invariance of inner product, 85. 6.3: Invariance of outer product, 86.

3 Differential Geometry 88

§1. Arc Length of a Space Curve 88

1.1: An integral formula for arc length, 89. 1.2: Tangent to a curve, 90.

§2. Osculating Plane 92

2.1: Zeros. Order of contact, 93. 2.2: Equation of the osculating plane, 93. 2.3: Trihedral at a point, 95.

§3. Curvature and Torsion 97

3.1: Curvature, 97. 3.2: Torsion, 98.

§4. Frenet-Serret Formulas 101

4.1: Derivation of the formulas, 102. 4.2: An application, 102.

3 Differential Geometry (Continued)

§5. Surface Theory 105

5.1: The normal vector, 105. 5.2: Tangent plane, 107. 5.3: Normal line, 107. 5.4: An example, 108.

§6. Fundamental Differential Forms 109

6.1: First fundamental form, 109. 6.2: Arc length and angle, 110. 6.3: Second fundamental form, 111. 6.4: Curvature of a normal section of a surface, 111.

§7. Mercator Maps 113

7.1: Curves on a sphere, 113. 7.2: Curves on a cylinder, 115. 7.3: Mercator maps, 116.

4 Applications of Partial Differentiation 118

§1. Maxima and minima 118

1.1: Necessary conditions, 118. 1.2: Sufficient conditions, 119. 1.3: Points of inflection, 120.

§2. Functions of Two Variables 122

2.1: Absolute maximum or minimum, 122. 2.2: Illustrative examples, 123. 2.3: Critical treatment of an elementary problem, 124.

§3. Sufficient Conditions 126

3.1: Relative extrema, 126. 3.2: Saddle-points, 128. 3.3: Least squares, 130.

§4. Functions of Three Variables 132

4.1: Quadratic forms, 132. 4.2: Relative extrema, 134.

§5. Lagrange's Multipliers 135

5.1: One relation between two variables, 135. 5.2: One relation among three variables, 138. 5.3: Two relations among three variables, 139.

§6. Families of Plane Curves 141

6.1: Envelopes, 141. 6.2: Curve as envelope of its tangents, 143. 6.3: Evolute as envelope of normals, 144.

§7. Families of Surfaces 145

7.1: Envelopes of families of surfaces, 145. 7.2: Developable surfaces, 147.

5 Stieltjes Integral 149

§1. Introduction 149

1.1: Definitions, 151. 1.2: Existence of the integral, 152.

5 Stieltjes Integral (Continued)

§2. Properties of the Integral 155

2.1: A table of properties, 155. 2.2: Sums, 156. 2.3: Riemann integrals, 156. 2.4: Extensions, 156.

§3. Integration by Parts 159

3.1: Partial summation, 159. 3.2: The formula, 160.

§4. Laws of the Mean 161

4.1: First mean-value theorem, 162. 4.2: Second mean-value theorem, 163.

§5. Physical Applications 165

5.1: Mass of a material wire, 165. 5.2: Moment of inertia, 167.

§6. Continuous Functions 170

6.1: The Heine-Borel theorem, 170. 6.2: Bounds of continuous functions, 171. 6.3: Maxima and minima of continuous functions, 171. 6.4: Uniform continuity, 172. 6.5: Duhamel's theorem, 173. 6.6: Another property of continuous function, 174. 6.7: Critical remarks, 175.

§7. Existence of Stieltjes Integrals 176

7.1: Preliminary results, 176. 7.2: Proof of theorem I, 178. 7.3: The Riemann integral, 178.

6 Multiple Integrals 181

§1. Introduction 181

1.1: Regions, 181. 1.2: Definitions, 182. 1.3: Existence of the integral, 183.

§2. Properties of Double Integrals 185

2.1: A table of properties, 185. 2.2: Iterated integrals, 185. 2.3: Volume of a solid, 186.

§3. Evaluation of Double Integrals 188

3.1: The fundamental theorem, 188. 3.2: Illustrations, 190.

§4. Polar Coordinates 191

4.1: Region R_θ and R_r, 192. 4.2: The fundamental theorem, 192. 4.3: Illustrations, 193.

§5. Change in Order of Integration 195

5.1: Rectangular coordinates, 195. 5.2: Polar coordinates, 196.

§6. Applications 198

6.1: Duhamel's theorem, 198. 6.2: Center of gravity of a plane lamina, 199. 6.3: Moments of inertia, 200.

6 Multiple Integrals (Continued)

§7. Further Applications 202

7.1: Definition of area, 202. 7.2: A preliminary result, 202. 7.3: The integral formula, 203. 7.4: Critique of the definition, 204. 7.5: Attraction, 204.

§8. Triple Integrals 206

8.1: Definition of the integral, 206. 8.2: Iterated integral, 207. 8.3: Applications, 208.

§9. Other Coordinates 210

9.1: Cylindrical coordinates, 210. 9.2: Spherical coordinates, 211.

§10. Existence of Double Integrals 213

10.1: Uniform continuity, 213. 10.2: Preliminary results, 214. 10.3: Proof of theorem I, 215. 10.4: Area, 215.

7 Line and Surface Integrals 217

§1. Introduction 217

1.1: Curves, 217. 1.2: Definition of line integrals, 218. 1.3: Work, 221.

§2. Green's Theorem 223

2.1: A first form, 223. 2.2: A second form, 224. 2.3: Remarks, 225. 2.4: Area, 225.

§3. Application 227

3.1: Existence of exact differentials, 227. 3.2: Exact differential equations, 229. 3.3: A further result, 230. 3.4: Multiply connected regions, 230.

§4. Surface Integrals 232

4.1: Definition of surface integrals, 232. 4.2: Green's or Gauss's theorem, 234. 4.3: Extensions, 237.

§5. Change of Variable in Multiple Integrals 239

5.1: Transformations, 239. 5.2: Double integrals, 241. 5.3: An application, 243. 5.4: Remarks, 244. 5.5: An auxiliary result, 244.

§6. Line Integrals in Space 246

6.1: Definition of the line integral, 246. 6.2: Stokes's theorem, 247. 6.3: Remarks, 249. 6.4: Exact differentials, 251. 6.5: Vector considerations, 252.

8 Limits and Indeterminate Forms 257

§1. The Indeterminate Form 0/0 257

1.1: The law of the mean, 258. 1.2: Generalized law of the mean, 259. 1.3: L'Hospital's rule, 260.

8 Limits and indeterminate Forms (Continued)

§2. The Indeterminate Form ∞/∞

2.1: L'Hospital's rule, 264.

§3. Other Indeterminate Forms 268

3.1: The form $0\cdot\infty$, 268. 3.2: The form $\infty - \infty$, 269. 3.3: The forms 0^0, 0^∞, ∞^0, ∞^∞, 1^∞, 269.

§4. Other Methods. Orders of Infinity 271

4.1: The method of series, 271. 4.2: Change of variable, 273. 4.3: Orders of infinity, 274.

§5. Superior and Inferior Limits 277

5.1: Limit points of a sequence, 277. 5.2: Properties of superior and inferior limits, 279. 5.3: Cauchy's criterion, 280. 5.4: L'Hospital's rule (concluded), 281.

9 Infinite Series 284

§1. Convergence of Series. Comparison Tests 284

1.1: Convergence and divergence, 284. 1.2: Comparison tests, 285.

§2. Convergence Tests 288

2.1: D'Alembert's ratio test, 288. 2.2: Cauchy's test, 289. 2.3: Maclaurin's integral test, 289.

§3. Absolute Convergence. Altering Series 292

3.1: Absolute and conditional convergence, 292. 3.2: Leibniz's theorem on alternating series, 293.

§4. Limit Tests 295

4.1: Limit test for convergence, 296. 4.2: Limit test for divergence, 296.

§5. Uniform Convergence 298

5.1: Definition of uniform convergence, 299. 5.2: Weierstrass's *M*-test, 301. 5.3: Relation to absolute convergence, 301.

§6. Applications 303

6.1: Continuity of the sum of a series, 303. 6.2: Integration of series, 304. 6.3: Differentiation of series, 305.

§7. Divergent Series 307

7.1: Precaution, 308. 7.2: Cesàro summability, 309. 7.3: Regularity, 310. 7.4: Other methods of summability, 311.

§8. Miscellaneous Methods 313

8.1: Cauchy's inequality, 313. 8.2: Hölder and Minkowski inequalities, 314. 8.3: Partial summation, 315.

9 Infinite Series (Continued)

§9. Power Series 318

9.1: Region of convergence, 318. 9.2: Uniform convergence, 319. 9.3: Abel's theorem, 320.

10 Convergence of Improper Integrals 323

§1. Introduction 323

1.1: Classification of improper integrals, 324. 1.2: Type I., Convergence, 324. 1.3: Comparison tests, 326. 1.4: Absolute convergence, 327.

§2. Type I. Limit Tests 330

2.1: Limit test for convergence, 330. 2.2: Limit test for divergence, 330.

§3. Type I. Conditional Convergence 333

3.1: Integrand with oscillating sign, 333. 3.2: Sufficient conditions for conditional convergence, 335.

§4. Type III 337

4.1: Convergence, 338. 4.2: Comparison tests, 338. 4.3: Absolute convergence, 339. 4.4: Limit tests, 339. 4.5: Oscillating integrands, 341.

§5. Combination of Types 342

5.1: Type II, 342. 5.2: Type IV, 343. 5.3: Summary of limit tests, 343. 5.4: Combinations of integrals, 344.

§6. Uniform Convergence 347

6.1: The Weierstrass M-test, 348.

§7. Properties of Proper Integrals 350

7.1: Integral as a function of its limits of integration, 350. 7.2: Integral as a function of a parameter, 351. 7.3: Integrals as composite functions, 353. 7.4: Application to Taylor's formula, 354.

§8. Application of Uniform Convergence 356

8.1: Continuity, 356. 8.2: Integration, 357. 8.3: Differentiation, 358.

§9. Divergent Integrals 361

9.1: Cesàro summability, 361. 9.2: Regularity, 361. 9.3: Other methods of summability, 362.

§10. Integral Inequalities 364

10.1: The Schwarz inequality, 364. 10.2: The Hölder inequality, 365. 10.3: The Minkowski inequality, 365.

11 The Gamma Function. Evaluation of Definite Integrals 367

§1. Introduction 367

1.1: The gamma function, 368. 1.2: Extension of definition, 369. 1.3: Certain constants related to $\Gamma(x)$, 371. 1.4: Other expressions for $\Gamma(x)$, 372.

§2. The Beta Function 373

2.1: Definition and convergence, 373. 2.2: Other integral expressions, 374. 2.3: Relation to $\Gamma(x)$, 375. 2.4: Wallis's product, 376.

§3. Evaluation of Definite Integrals 378

3.1: Differentiation with respect to a parameter, 379. 3.2: Use of special Laplace transforms, 380. 3.3: The method of infinite series, 381.

§4. Stirling's Formula 383

4.1: Preliminary results, 384. 4.2: Proof of Stirling's formula, 386. 4.3: Existence of Euler's constant, 387. 4.4: Infinite products, 388. 4.5: An infinite product for $\Gamma(x)$, 389.

12 Fourier Series 393

§1. Introduction 393

1.1: Definitions, 393. 1.2: Orthogonality relation, 394. 1.3: Further examples of Fourier series, 396.

§2. Several Classes of Functions 398

2.1: The classes P, D, D^1, 399. 2.2: Relation among the classes, 401. 2.3: Abbreviations, 401.

§3. Convergence of a Fourier Series to Its Defining Function 403

3.1: Bessel's inequity, 403. 3.2: The Riemann-Lebesgue, theorem, 404. 3.3: The remainder of a Fourier series, 405. 3.4: The convergence theorem, 406.

§4. Extensions and Applications 408

4.1: Points of discontinuity, 408. 4.2: Riemann's theorem, 409. 4.3: Applications, 410.

§5. Vibrating String 413

5.1: Fourier series for an arbitrary interval, 414. 5.2: Differential equation of vibrating string, 414. 5.3: A boundary-value problem, 416. 5.4: Solution of the problem, 417. 5.5: Uniqueness of solution, 418. 5.6: Special cases, 419.

§6. Summability of Fourier Series 421

6.1: Preliminary results, 422. 6.2: Fejér's theorem. 423. 6.3: Uniformity, 423.

12 Fourier Series (Continued)

§7. Applications 425

7.1: Trigonometric approximation, 425. 7.2: Weierstrass's theorem on polynomial approximation, 426. 7.3: Least square approximation, 427. 7.4: Parseval's theorem, 428. 7.5: Uniqueness, 429.

§8. Fourier Integral 431

8.1: Analogies with Fourier series, 431. 8.2: Definition of a Fourier integral, 432. 8.3: A preliminary result, 432. 8.4: The convergence theorem, 433. 8.5: Fourier transform, 434.

13 The Laplace Transform 436

§1. Introduction 436

1.1: Relation to power series, 437. 1.2: Definitions, 438.

§2. Region of Convergence 440

2.1: Power series, 441. 2.2: Convergence theorem, 441. 2.3: Examples, 443.

§3. Absolute and Uniform Convergence 445

3.1: Absolute convergence, 445. 3.2: Uniform convergence, 446. 3.3: Differentiation of generating functions, 446.

§4. Operational Properties of the Transform 448

4.1: Linear operations, 448. 4.2: Linear change of variable, 449. 4.3: Differentiation, 449. 4.4: Integration, 450. 4.5: Illustrations, 450.

§5. Resultant 452

5.1: Definition of resultant, 452. 5.2: Product of generating functions, 453. 5.3: Application, 454.

§6. Tables of Transforms 455

6.1: Some new functions, 456. 6.2: Transforms of the functions, 457.

§7. Uniqueness 459

7.1: A preliminary result, 459. 7.2: The principal result, 460.

§8. Inversion 461

8.1: Preliminary results, 462. 8.2: The inversion formula, 463.

§9. Representation 465

9.1: Rational functions, 465. 9.2: Power series in $1/s$, 465. 9.3: Illustrations, 466.

§10. Related Transforms 468

10.1: The bilateral Laplace transform, 468. 10.2: Laplace-Stieltjes transform, 470. 10.3: The Stieltjes transform, 471.

14 Applications of the Laplace Transform 474

§1. Introduction 474

1.1: Integrands that are generating functions, 474. 1.2: Integrands that are determining functions, 476.

§2. Linear Differential Equation 478

2.1: First order equations, 478. 2.2: Uniqueness of solution, 480. 2.3: Equations of higher order, 480.

§3. The General Homogeneous Case 482

3.1: The problem, 482. 3.2: The class E, 483. 3.3: Rational functions, 484. 3.4: Solution of the problem, 484.

§4. The Nonhomogeneous Case 487

4.1: The problem, 487. 4.2: Solution of the problem, 487. 4.3: Uniqueness of solution, 488.

§5. Difference Equations 490

5.1: The problem, 490. 5.2: The power series transform, 491. 5.3: A property of the transform, 492. 5.4: Solution of difference equations, 492.

§6. Partial Differential Equations 494

6.1: The first transformation, 495. 6.2: The second transformation, 495. 6.3: The plucked string, 496.
