0	Introduction	1
1	Historical overview	3
2	Summability methods in general	9
	2.1 Regularity	9
	2.2 Generalized Cesàro summability	16
	2.3 Sequence-to-function methods based on power series	23
	2.4 Euler summability	25
3	Borel's methods of summability	27
	3.1 Basic definitions	27
	3.2 Basic properties of Borel's methods	28
	3.2.1 Common properties	28
	3.2.2 Interrelationships	29
	3.3 Extensions	30
	3.3.1 Absolute summability	30
	3.3.2 Strong summability	31
	3.3.3 Normal and regular summability	31
	3.4 Relationships with other methods	32
	3.4.1 Euler methods	32
	3.4.2 Cesàro and Abel methods	32
	3.4.3 Other methods	34
	3.5 Abelian theorems	34
	3.6 Tauberian theorems	35
4	Relations with the family of circle methods	37
	4.1 Euler–Knopp summability methods	37
	4.2 T_α methods	39

4.2.1	Definitions	39
4.2.2	T_α on series	40
4.2.3	T_α and T_β	41
4.2.4	T_α and B	42
4.2.5	Translativity	43
4.3	Meyer-König's S_α methods	43
4.3.1	Definition	43
4.3.2	Translativity	44
4.3.3	S_α on series	45
4.3.4	S_α and S_β	45
4.3.5	S_α and E_p	46
4.3.6	Function theoretic considerations	46
4.4	Relations of T_α and S_α with E_p and B	48
4.5	Relations of E_p , B , and S_α with T_α	49
4.6	Equivalence of E_p , B , S_α , T_α for bounded sequences	54
4.7	Tauberian theorems	54
5	Generalizations of Borel's methods	57
5.1	First attempts	57
5.2	Mittag-Leffler's functions	58
5.3	Borel-type methods	59
5.3.1	Definitions	59
5.3.2	Preliminaries	62
5.3.3	Lemmas	64
5.4	Relationships with respect to the parameter α	66
5.5	Abelian relationships with respect to the parameter β	67
5.5.1	Interrelationships with same type	67
5.5.2	Interrelationships between types	69
5.6	Tauberian relationships with respect to the parameter β	79
5.6.1	Preliminary results	80
5.6.2	Proofs of the theorems	84
5.7	Extended definitions	85
5.7.1	Results involving strong summability	86
5.7.2	Results involving absolute summability	87
6	Abelian theorems	89
6.1	Introduction	89
6.2	Abelian theorems for ordinary Borel-type methods	89
6.3	Abelian theorems for strong Borel-type methods	93
6.4	Abelian theorems for absolute Borel-type methods	94

7	Tauberian theorems – I	97
7.1	The ‘o’ theorem	98
7.1.1	Preliminary results	98
7.1.2	Results on Cesàro sums	102
7.1.3	Proof of the ‘o’ theorem	107
7.2	The ‘O’ theorem	108
7.2.1	Preliminary results	108
7.2.2	Estimates of some sums as integrals	110
7.2.3	Results on summability (e, c)	112
7.2.4	Two preliminary theorems	118
7.2.5	Proof of the ‘O’ theorem	121
7.3	Kwee’s ‘O’ theorem	122
7.3.1	Preliminary results	123
7.3.2	Proof of Kwee’s ‘O’ theorem	127
7.3.3	Kwee’s ‘O’ theorem is best possible	129
8	Tauberian theorems – II	133
8.1	The slowly decreasing theorem	133
8.1.1	Preliminary results	135
8.2	An equivalence theorem	149
8.3	Proof of the slowly decreasing theorem	157
8.4	Gap theorems	157
9	Relationships with other methods	159
9.1	Product methods with the Cesàro method	159
9.1.1	Product methods	159
9.1.2	Preliminary results	160
9.1.3	Proof of the Cesàro product theorem	162
9.2	Abelian relations with the Abel-type methods	164
9.2.1	Review of the definitions	164
9.2.2	Preliminary results	165
9.2.3	Theorems from Borel to Abel	167
9.3	Tauberian relations with the Abel-type methods	168
9.3.1	Preliminary results	169
9.3.2	Theorems from Abel to Borel	169
9.4	Tauberian relations with the logarithmic method	175
9.4.1	Preliminary results	175
9.4.2	The logarithmic theorem	177
9.5	Relations with the Lambert method	180
9.5.1	Transformation formulae	183
9.5.2	Essential lemmas	186

9.5.3	Proof of the Lambert theorem	188
10	Applications of Borel's methods	191
10.1	An early application	191
10.2	Laplace transforms	193
10.3	Entire functions and the Borel transform	195
10.3.1	The Phragmén–Lindelöf indicator function	195
10.3.2	The conjugate indicator diagram	196
10.4	Arithmetical functions	198
10.5	Basic theory	204
