

Contents

Chapter I. Fourier transforms on $L_1(-\infty, \infty)$

§1. Basic properties and examples	1
§2. The L_1 -algebra	16
§3. Differentiability properties	18
§4. Localization, Mellin transforms	25
§5. Fourier series and Poisson's summation formula.....	32
§6. The uniqueness theorem	36
§7. Pointwise summability	38
§8. The inversion formula	44
§9. Summability in the L_1 -norm	51
§10. The central limit theorem	56
§11. Analytic functions of Fourier transforms	60
§12. The closure of translations	68
§13. A general tauberian theorem	73
§14. Two differential equations	77
§15. Several variables	83

Chapter II. Fourier transforms on $L_2(-\infty, \infty)$

§1. Introduction	91
§2. Plancherel's theorem	92
§3. Convergence and summability	100
§4. The closure of translations	103
§5. Heisenberg's inequality	105
§6. Hardy's theorem	112
§7. The theorem of Paley and Wiener	116
§8. Fourier series in $L_2(a, b)$	122
§9. Hardy's interpolation formula	128
§10. Two inequalities of S. Bernstein	131
§11. Several variables	134

Chapter III. Fourier-Stieltjes transforms (one variable)

§1. Basic properties	137
§2. Distribution functions, and characteristic functions	140
§3. Positive-definite functions	144
§4. A uniqueness theorem	154
