

CONTENTS

PREFACE

| | Page |
|--|-----------|
| I INTRODUCTION | 1 |
| What is a Fourier Transform? | 2 |
| Typical Applications of the Transform | 3 |
| Formal Statement of the Fourier Transform | 5 |
| Convolutions | 6 |
| Notations | 6 |
| The Meaning of Negative Frequencies | 7 |
| Basic Formulae | 8 |
| | |
| II THE ELEMENTARY TRANSFORM | 10 |
| The Spatial Relationships | 10 |
| Reciprocity | 12 |
| Time and Frequency | 13 |
| The Delta Function | 15 |
| | |
| III EXTENDED FUNCTIONS: THE SUPERPOSITION OR SUMMATION PROPERTY | 19 |
| The Superposition of Elementary Functions | 19 |
| The Rectangular Function | 21 |
| Complex Distributions | 24 |
| A List of Common Fourier Pairs | 26 |
| | |
| IV THE DIRECT APPLICATION OF FOURIER TRANSFORMS | 31 |
| Frequency and Time Relationships in Simple Circuits | 31 |
| One Dimensional Aerial Systems | 32 |
| Optical Slits and Gratings | 34 |
| An Optical Example — The Rayleigh Refractometer | 35 |
| Examples in Acoustics | 37 |
| Two Dimensional Fourier Transforms | 37 |
| The Numerical Evaluation of Fourier Transforms | 41 |

| | Page |
|--|------------|
| V LIMITATIONS, PRODUCTS AND CONVOLUTIONS | 45 |
| The Effect of Interposing Limits | 45 |
| Convolutions | 47 |
| Physical Interpretation of Convolutions | 49 |
| Some Examples of Convolutions | 54 |
| The Solution of Fourier Transforms by the Application of the Convolution Theorem | 56 |
| The Isosceles Triangle | 56 |
| The Doublet Pulse | 57 |
| Convolutions involving the Sine Integral $\text{Si}(x)$ | 60 |
| Two Dimensional Convolutions | 65 |
| VI THE DIFFERENTIATION OF FOURIER TRANSFORMS | 68 |
| Differentiation and Repeated Differentiation | 69 |
| The Fourier Transform of a Step Function or Straight Edge | 70 |
| The Convolution — Differentiation Relationship | 74 |
| The Differential Operator $h(x)$ | 75 |
| The Integral Operator | 79 |
| VII THE AUTO-CORRELATION FUNCTION AND THE TRANSFER FUNCTION OF A SYSTEM LINEAR IN INTENSITY | 82 |
| The Auto-correlation Function | 82 |
| The Transfer Function of a System Linear in Intensity | 86 |
| Examples on Chapter VII: | 90 |
| 1. The Telescope | 90 |
| 2. Stellar Interferometers | 95 |
| (i) The Michelson Stellar Interferometer | 95 |
| (ii) The Switched Interferometer | 99 |
| (iii) The Post-Detector Intensity Interferometer | 102 |
| Note on Fourier Synthesis of Apertures | 105 |
| APPENDIX I ANALOGUE COMPUTERS OF FOURIER TRANSFORMS | 106 |
| (i) The Diffraction Computer | 106 |
| (ii) A Mechanical Computer | 107 |
| (iii) A Coherent Electronic Computer | 108 |
| (iv) A Coherent Electronic Computer with an Incoherent Source | 109 |
| APPENDIX II | 111 |
| Tables of $\frac{J_1 \chi}{\chi}$, $\text{Si}(x)$, $\frac{\sin \chi}{\chi}$. | |
| INDEX | 116 |
