

# CONTENTS

1. INTRODUCTION	3
2. THE HARTLEY TRANSFORM	8
The original formulation	8
<i>Delta functions</i>	8
<i>Null functions</i>	9
<i>The cas function integrals</i>	9
The Hartley transform	10
Even and odd parts	11
Connecting relations	12
Examples	12
<i>Truncated exponential</i>	12
<i>Rectangular pulse</i>	14
<i>Impulse</i>	15
<i>Critically damped pulse</i>	16
Power spectrum and phase	17
Problems	20
3. THEOREMS	22
Corresponding operations	22
Convolution	23
Relations between domains	25
Problems	25
4. THE DISCRETE HARTLEY TRANSFORM	27
The discrete Hartley transform integral	27
Meaning of $\tau$ and $\nu$	28
Even and odd parts	28
Examples of DHTs	29
<i>Exponential tail</i>	29
<i>Binomial pulse</i>	29
<i>Gate function</i>	30
Degrees of freedom	32
Other real kernels	32
Theorems	32
<i>Reversal theorem</i>	33
<i>Addition theorem</i>	33
<i>Shift theorem</i>	33
<i>Convolution theorem</i>	34
<i>Product theorem</i>	35
<i>Stretch theorem</i>	35
Conclusion	35
Problems	36

5. DIGITAL FILTERING BY CONVOLUTION	38
Cyclic convolution	39
Packing with zeros	40
Inverting convolution	42
Convolution theorem	42
Inverse convolution theorem (spectral smoothing)	43
Numerical example of convolution	44
The factor $N^{-1}$	45
Numerical example of autocorrelation	46
Low pass filtering	47
Edge enhancement	48
Convolution by FHT	50
Dispensing with permutation	50
Convolution as matrix multiplication	51
Problems	52
6. TWO-DIMENSIONAL TRANSFORMS	54
The two-dimensional Hartley transform	54
Symmetry and antisymmetry	55
Examples	55
Theorems in two dimensions	56
Circular symmetry	56
Filtering in two dimensions	58
Cyclicity in two dimensions	59
Three dimensions	61
Problems	61
7. FACTORIZATION OF THE TRANSFORM MATRIX	64
Matrix formulation of discrete operator	64
Permutation	66
Permutation diagrams	67
Permutation matrix	68
Cell structure of permutation	68
Stage matrices	73
Conversion to DFT	75
Problems	77
8. THE FAST ALGORITHM	79
The definition equations	79
The virtues of $N \log N$	81
Repeated halving	83
Transformation by decomposition	83
The general decomposition formula	85
Equations for $N = 16$	85
Flow diagram	88
Computing in place	90

Stripe diagram analysis of timing	91
<i>Figure of merit</i>	93
Powers of 2	93
Trigonometric functions	94
Fast sine functions	95
Fast rotation	98
Fast permutation	99
Radix 4 and other refinements	100
Earlier approaches to real data	102
Problems	104
 9. AN OPTICAL HARTLEY TRANSFORM	 105
Optical relevance	105
Symmetry considerations	106
Implementation using polarization	107
A practical implementation	108
Incoherent object	109
Example	110
Holography in the Hartley plane	111
 APPENDIX 1 - COMPUTER PROGRAMS	 113
APPENDIX 2 - ATLAS OF HARTLEY TRANSFORMS	145
INDEX	157
