

# TABLE OF CONTENTS

Introduction	
0.1 Definitions and examples	1
0.2 General properties	7
0.3 Outline of this monograph	11
0.4 A short historical note	12
Chapter 1 : Orthogonal Polynomials on a Compact Set	
1.1 Some notions from potential theory	14
1.2 Main theorem	18
1.3 Orthogonal polynomials on $[-1,1]$	24
1.3.1 The Szegő class	25
1.3.2 Beyond the Szegő class	33
1.4 Orthogonal polynomials on Julia sets	35
Chapter 2 : Asymptotically Periodic Recurrence Coefficients	
2.1 Periodic recurrence coefficients	43
2.2 Asymptotic periodicity	53
2.3 Construction of the spectral measure	63
2.4 Strong asymptotics	70
2.5 Weak asymptotics	74
2.6 Periodicity of period $N=1$	81
Chapter 3 : Probabilistic Proofs of Asymptotic Formulas	
3.1 The local limit theorem in probability theory	87
3.2 First order results	90
3.3 Asymptotic expansions	100
Chapter 4 : Orthogonal Polynomials on Unbounded Sets	
4.1 Contracted zero distributions	105
4.2 Freud conjectures	112
4.3 Results using the recurrence relation	115
4.4 Plancherel-Rotach asymptotics	124
4.5 Weighted zero distributions	128

4.6	Rate of convergence for weighted zero distributions	132
Chapter 5 : Zero Distribution and Consequences		
5.1	Asymptotic behaviour of the Taylor coefficients	138
5.2	Weak asymptotics for Christoffel functions	151
5.3	Toeplitz matrices associated with orthogonal polynomials	154
5.4	Functions of the second kind	159
Chapter 6 : Some applications		
6.1	Random matrices	164
6.2	Discrete Schrödinger equations	168
6.3	Birth-and-death processes	171
Appendix		
A.1	The Stieltjes transform	175
A.2	The Stieltjes convolution	177
