

Contents

| | |
|---|----|
| Chapter 1. Introduction | 1 |
| 1.1. An Overview of Multiplicative Complexity | 1 |
| 1.2. Why Count Only Multiplications and Divisions? | 2 |
| 1.3. Organization | 3 |
| Chapter 2. Multiplicative Complexity of Linear and Bilinear Systems | 5 |
| 2.1. Historical Perspective | 5 |
| 2.2. Definitions and Basic Results | 6 |
| 2.3. Semilinear Systems | 11 |
| 2.4. Quadratic and Bilinear Systems | 14 |
| 2.4.1. Properties of Quadratic Systems | 14 |
| 2.4.2. Bilinear Systems and Noncommutative Algorithms | 18 |
| 2.4.3. Direct Products and Direct Sums of Systems | 24 |
| 2.5. Summary of Chapter 2 | 25 |
| Chapter 3. Convolution and Polynomial Multiplication | 27 |
| 3.1. Aperiodic Convolution / Polynomial Multiplication | 27 |
| 3.2. Polynomial Multiplication Modulo an Irreducible Polynomial | 31 |
| 3.3. Polynomial Multiplication Modulo a General Polynomial | 34 |
| 3.4. Products of a Fixed Polynomial with Several Polynomials | 36 |
| 3.4.1. Equivalent Systems and Row Reduced Forms | 37 |
| 3.4.2. Reduction and Inflation Mappings | 38 |
| 3.4.3. Equivalence of Products with a Fixed Polynomial | 39 |
| 3.4.4. Multiplicative Complexity Results | 45 |
| 3.5. Products with Several Fixed Polynomials in the Same Ring | 48 |
| 3.6. Products with Several Fixed Polynomials in Different Rings | 52 |
| 3.7. Multivariate Polynomial Multiplication | 52 |
| 3.7.1. Polynomial Products in Two Variables | 53 |
| 3.7.2. Multidimensional Cyclic Convolution | 57 |
| 3.8. Summary of Chapter 3 | 59 |
| Chapter 4. Constrained Polynomial Multiplication | 61 |
| 4.1. General Input Constraints | 61 |

| | |
|--|-----|
| 4.2. Multiplication by a Symmetric Polynomial | 66 |
| 4.3. Multiplication by an Antisymmetric Polynomial | 67 |
| 4.4. Products of Two Symmetric Polynomials | 68 |
| 4.5. Polynomial Multiplication with Restricted Outputs | 69 |
| 4.5.1. Decimation of Outputs | 69 |
| 4.5.2. Other Output Restrictions | 73 |
| 4.6. Summary of Chapter 4 | 74 |
| Chapter 5. Multiplicative Complexity of Discrete Fourier Transform | 76 |
| 5.1. The Discrete Fourier Transform | 76 |
| 5.2. Prime Lengths | 77 |
| 5.2.1. Rader's Permutation | 77 |
| 5.2.2. Multiplicative Complexity | 78 |
| 5.3. Powers of Prime Lengths | 81 |
| 5.4. Power-of-Two Lengths | 90 |
| 5.5. Arbitrary Lengths | 96 |
| 5.6. DFTs with Complex-Valued Inputs | 105 |
| 5.7. Multidimensional DFTs | 105 |
| 5.8. Summary of Chapter 5 | 107 |
| Chapter 6. Restricted and Constrained DFTs | 108 |
| 6.1. Restricting DFT Outputs to One Point | 108 |
| 6.2. Constraining DFT Inputs to One Point | 110 |
| 6.3. DFTs with Symmetric Inputs | 110 |
| 6.4. Discrete Hartley Transform | 115 |
| 6.5. Discrete Cosine Transform | 116 |
| 6.6. Summary of Chapter 6 | 117 |
| Appendix A. Cyclotomic Polynomials and Their Properties | 119 |
| Appendix B. Complexities of Multidimensional Cyclic Convolutions | 123 |
| Appendix C. Programs for Computing Multiplicative Complexity | 127 |
| Appendix D. Tabulated Complexities of the One-Dimensional DFT | 137 |
| Problems | 143 |
| Bibliography | 147 |
| Index | 151 |
