Notation xv

Brief Review xvii

1. Introduction to Fourier Series 3
 1. Periodic Functions, Fourier Series on $(-\pi, \pi)$ 3
 2. Arbitrary Periods, Periodic Extensions 9
 3. Cosine and Sine Series 14
 4. Convergence of Fourier Series 17
 5. Uniform Convergence 24
 - *6. Abel's Test 30
 7. Complex Form of Fourier Series 36

2. Convergence of Fourier Series 40
 1. Bessel's Inequality 40
 2. Dirichlet's Integral 45
 3. Pointwise Convergence 48
 4. The Cauchy-Schwarz Inequalities, Uniform Convergence 57
 - *5. Gibb's Phenomenon 61
 6. Mean Square Convergence 65
 7. Summation of Fourier Series by Arithmetic Means 71
 8. Summation Kernels 82

3. Applications of Fourier Series 91
 1. Derivation of Some Problems 91
 2. Solution of the Force-Free Vibrating String Problem 98

3. D'Alembert's Solution of the Vibrating String Problem 108
4. Heat Conduction 114
5. The Applied Force Problem for the Vibrating String 124

4. Some Harmonic Function Theory 134
 1. Introduction 134
 2. Harmonic Functions on a Disk; Poisson's Integral 140
 3. Poisson's Integral 147
 4. The Maximum–Minimum Principle 154
 5. Properties of Harmonic Functions 157
 6. Some Applications of the Divergence Theorem 163
 7. The Heat Equation and the Theta Function Kernel 167
 8. Harmonic Functions on Connected Open Sets 173
 9. Miscellaneous Exercises 181

5. Multiple Fourier Series 185
 1. Double Fourier Series, Real Form 185
 2. Complex Form for Double Fourier Series, Triple Fourier Series 189
 3. Convergence and Completeness 193
 4. Some Applications 199
 - *5. Completeness of Complex Exponential Systems 212

6. Basic Theory of the Fourier Transform 217
 1. Introduction 217
 2. Improper Integrals Dependent on a Parameter 222
 3. Basic Computational Theorems 229
 4. Fourier Inversion, Gauss–Weierstrass Summation 234
 5. Fourier Inversion, Dirichlet's Method 239
 6. Convolution 247
 7. Multiple Fourier Transforms 254
 8. Miscellaneous Exercises 262

7. Applications of Fourier Transforms 264
 - Part A. Partial Differential Equations 264
 1. Laplace's Equation 264
 2. The Heat Equation 271
 - *3. Uniqueness of Solutions to the Heat Equation 279
 - Part B. Fourier Optics 284
 4. Fraunhofer Diffraction 284
 5. Rectangular Apertures 289

- 6. Circular Apertures 292
- 7. Interference 295
- 8. Diffraction Gratings 297
- 9. The Array Theorem 302
- 10. Imaging Theory 305
 - Part C. Signal Processing 311
- 11. A Brief Introduction to Sampling Theory 311
- 12. The Poisson Summation Formula 315
- 13. Computerized Fourier Analysis (Fast Fourier Transforms) 320

- 8. Legendre Polynomials and Spherical Harmonics 329
 - 1. A Problem in Mechanics, Legendre Polynomials 330
 - 2. Rodrigues' Formula and Laplace's Integral 333
 - 3. Legendre's Equation, Orthogonality of the Legendre Polynomials 337
 - 4. Solution of Dirichlet's Problem by Legendre Polynomials 341
 - 5. Dirichlet's Problem inside a Sphere, Laplace's Series 346
 - 6. Spherical Harmonics 352
 - 7. Poisson's Integral 356
 - 8. Validity of Spherical Harmonic Series Expansions 360
 - 9. Properties of Harmonic Functions 366
 - 10. Miscellaneous Exercises 369

- 9. Some Other Transforms 371
 - Part A. The Laplace Transform 371
 - 1. Definition and Examples 371
 - 2. Properties of the Laplace Transform 374
 - 3. Some Remarks on Applications 378
 - Part B. The Radon Transform 380
 - 4. Introduction 380
 - 5. Coordinatized Form for the Radon Transform 383
 - 6. Some Properties of Radon Transforms 385
 - 7. Poisson's Equation 389
 - 8. Inversion of Radon Transforms 391
 - 9. Further Aspects of Inversion 397
 - 10. The Wave Equation, Solution by Plane Waves 398

- 10. A Brief Introduction to Bessel Functions 401
 - 1. Bessel's Equation 401
 - 2. Recursion Relations, Integral Form 403
 - 3. Orthogonality, Fourier-Bessel Series 407
 - 4. Applications 413

Appendix A: Divergence of Fourier Series 421

**Appendix B: Brief Tables of Fourier Series and
Fourier Transforms** 424

Bibliography 426
