

CONTENTS

Chapter 1. Introduction to Abstract Algebra

1.1 Introduction	1
1.2 The Ring of Integers	2
1.3 The Ring \mathbb{Z}/n	6
1.4 Chinese Remainder Theorem (CRT) I	9
1.5 Unit Groups	15
1.6 Polynomial Rings	18
1.7 Field Extension	23
1.8 The Ring $F[x]/f(x)$	25
1.9 CRT for Polynomial Rings	28
References and Problems	31

Chapter 2. Tensor Product and Stride Permutation

2.1 Introduction	36
2.2 Tensor Product	36
2.3 Stride Permutations	43
2.4 Multidimensional Tensor Products	53
2.5 Vector Implementation of Tensor Products	58
2.6 Parallel Implementation of Tensor Products	65
References and Problems	69

Chapter 3. Cooley-Tukey FFT Algorithms

3.1 Introduction	72
3.2 Basic Properties of FFT Matrix	74
3.3 An Example of FFT Algorithm	74
3.4 Cooley-Tukey FFT for $N = 2M$	77
3.5 Twiddle Factors	79
3.6 FT Factors	82
3.7 Variants of Cooley-Tukey FFT Algorithm	84
3.8 Cooley-Tukey for $N = RS$	86
3.9 Arithmetic Cost	91
References and Problems	92

**Chapter 4. Variants of FFT Algorithms and
Their Implementations**

4.1 Introduction	94
4.2 Radix-2 Cooley-Tukey FFT Algorithm	96
4.3 Pease FFT Algorithm	100
4.4 Auto-sorting FFT Algorithm	105
4.5 Mixed-Radix Cooley-Tukey FFT Algorithm	107
4.6 Mixed-Radix Agarwal-Cooley FFT Algorithm	110
4.7 Mixed-Radix Auto-Sort FFT Algorithm	112
References and Problems	116

Chapter 5. Good-Thomas PFA

5.1 Introduction	119
5.2 Indexing by the CRT	120
5.3 An Example $N = 15$	121
5.4 Good-Thomas PFA for General Case	125
5.5 Self-sorting PFA	128
References and Problems	129

Chapter 6. Linear and Cyclic Convolution

6.1 Definitions	132
6.2 Convolution Theorem	139
6.3 Cook-Toom Algorithm	144
6.4 Winograd Small Convolution Algorithm	154
6.5 Linear and Cyclic Convolutions	163
6.6 Digital Filters	171
References and Problems	174

Chapter 7. Agarwal-Cooley Convolution Algorithm

7.1 Two-Dimensional Cyclic Convolution	176
7.2 Agarwal-Cooley Algorithm	182
References and Problems	186

Chapter 8. Introduction to Multiplicative Fourier Transform Algorithms (MFTA)	187
Chapter 9. <u>MFTA</u>: The Prime Case	
9.1 The Field Z/p	198
9.2 The Fundamental Factorization $N = p$	200
9.3 Rader's Algorithm	206
9.4 Reducing Additions	207
9.5 Winograd Small FFT Algorithm $N = p$	211
9.7 Summary	214
Tables, References and Problems	218
Chapter 10. <u>MFTA</u>: Product of Two Distinct Primes	
10.1 Basic Algebra	222
10.2 Transform Size $N = 15$	224
10.3 The Fundamental Factorization $N = 15$	226
10.4 Variants $N = 15$	228
10.5 General Case $N = pq$	232
10.6 Fundamental Factorization	235
10.7 Variants	236
10.8 Summary	240
Tables, References and Problems	242

Chapter 11. MFTA: Transform Size $N = Mr$ **M -Composite Integer and r -Prime**

11.1 Introduction	246
11.2 Main Theorem	248
11.3 Product of Three Distinct Primes	250
11.4 Transform Size $N = 12$	252
11.5 Transform Size $N = 4p$	254
11.6 Variants $N = 4p$	255
11.7 Transform Size $N = 60$	257
Tables, References and Problems	259

Chapter 12. MFTA: Transform Size $N = p^2$

12.1 Introduction	262
12.2 An Example $N = 9$	262
2.1 Algorithm I $N = 9$	264
2.2 Algorithm II $N = 9$	265
12.3 The General Case $N = p^2$	268
3.1 Algorithm I $N = p^2$	270
3.2 Algorithm II $N = p^2$	271
12.4 An Example $N = 3^3$	274
Tables, References and Problems	277

Chapter 13. Periodization and Decimation

13.1 Introduction	280
13.2 Periodic and Decimated Data	284
13.3 FT of Periodic and Decimated Data	288
13.4 The Ring Z/p^m	291
Problems	294

Chapter 14. Multiplicative Character and the FFT

14.1 Introduction	295
14.2 Periodicity	300
<i>2.1 Periodic Multiplicative Characters</i>	<i>300</i>
<i>2.2 Periodization Map</i>	<i>304</i>
14.3 FT's of Multiplicative Characters Z/p	306
14.4 FT's of Multiplicative Characters $N = p^m$	308
14.5 Orthogonal Basis Diagonalizing FT $N = p$	312
14.6 Orthogonal Basis Diagonalizing FT $N = p^m$	316
References and Problems	320

Chapter 15. Rationality

15.1 An Example $N = 7$	322
15.2 Prime Case	325

15.3 An Example $N = 3^2$	328
15.4 Transform Size	331
15.5 Exponential Basis	338
15.6 Polynomial Product Modulo a Polynomial	338
15.6 An Example $N = 3^3$	343
References	346
