

TABLE OF CONTENTS

PREFACE		v
CHAPTER 1.	KdV and KP; ANALYTIC METHODS	
	1. Inverse scattering	1
	2. KdV on the line	12
	3. Problems in mechanics and Hill's equation	21
	4. On the geometry of KdV	33
	5. Finite zone potentials	50
	6. Hamiltonian theory for KdV	58
	7. Determinant methods for KdV and KP; tau functions	70
CHAPTER 2.	SYSTEMS AND ALGEBRAIC METHODS	
	8. Orbits of the vacuum	99
	9. AKNS systems	109
	10. Some Lie theoretic methods	138
	11. The Hirota bilinear identity	152
	12. Algebraic curves and KP	165
	13. Introductory Sato theory	182
CHAPTER 3.	PHYSICS	
	14. Holonomic quantum fields	205
	15. Ising model and Bose gas	227
	16. Some remarks on 2-D quantum gravity and KdV	249
	17. Conformal field theory	255
	18. More on conformal field theory and tau functions	267
	19. More on Kricever data, Grassmannians, curves, etc.	283
	20. Remarks on Strings	295
	21. More on strings, Riemann surfaces, and tau functions	311

22. Remarks on tau functions, Cauchy-Riemann operators, and determinant bundles	326
23. Quantum inverse scattering	332
APPENDIX A. DIFFERENTIAL GEOMETRY AND ELEMENTARY HAMILTONIAN THEORY	341
APPENDIX B. RIEMANN SURFACES AND ALGEBRAIC CURVES	369
REFERENCES	397
INDEX	421
