Series Editor's Preface.....	v
Preface	xi
Introduction	1
References	8
PART I. QUANTUM SYSTEMS AND CLASSICAL BEHAVIOUR	13
Chapter 1.	
<i>Some physical models and nonlinear differential equations</i>	<i>13</i>
1. <i>Magnetic chain (the Heisenberg model)</i>	<i>13</i>
2. <i>Magnetic chain with magnon-phonon interaction</i>	<i>23</i>
3. <i>Nonlinearity of exchange integrals and phonon anharmonism in the Heisenberg model</i>	<i>25</i>
4. <i>Anisotropic magnetic chain in an external field breaking $U(1)$ (XY) symmetry</i>	<i>28</i>
5. <i>Generalized Hubbard model</i>	<i>30</i>
6. <i>Low frequency wave interaction with a packet of h.f. waves in plasmas</i>	<i>35</i>
7. <i>The ϕ^5 Schrödinger equation as a model to describe collective motions in nuclei</i>	<i>40</i>
8. <i>'Colour' generalization of a magnetic chain with magnon-phonon interaction</i>	<i>42</i>
9. <i>Multicolour Hubbard model</i>	<i>49</i>
Chapter 2.	
<i>Physically interesting nonlinear differential equations</i>	<i>55</i>
1. <i>Equations with quadratic dispersion</i>	<i>56</i>
2. <i>Equations with 'linear' dispersion</i>	<i>61</i>
3. <i>Relativistically-invariant equations</i>	<i>66</i>
4. <i>Dynamical systems given by differential-difference equations</i>	<i>71</i>
References.....	73
PART II. SOME EXACT RESULTS IN ONE-DIMENSIONAL SPACE	81
Chapter 3.	
<i>The Nonlinear Schrödinger equation and the Landau-Lifshitz equation</i>	<i>87</i>
1. <i>NSE associated with a symmetric space</i>	<i>88</i>
2. <i>The Sigma model representation of the NSE and the isotropic Landau-Lifshitz equation</i>	<i>93</i>
3. <i>Gauge connections of the LLE with uniaxial anisotropy and the NSE</i>	<i>106</i>

Chapter 4.

<i>Nonlinear Schrödinger equation with $U(p,q)$ internal symmetry and the SG equation</i>	113
1. <i>Equations of motion and the internal symmetry group</i>	113
2. <i>$U(p,q)$ NSE under trivial boundary conditions</i>	117
3. <i>The $U(1,0)$ model</i>	121
4. <i>The $U(0,1)$ model</i>	126
5. <i>The $U(1,1)$ model</i>	130
6. <i>Quasi-classical quantization of the $U(1,1)$ NSE</i>	135
7. <i>The SG equation</i>	137
<i>References</i>	143

PART III. NONCOMPACT SYMMETRIES AND BOSE GAS..... 149

Chapter 5.

<i>Dynamical symmetry and generalized coherent states</i>	149
1. <i>Bose gas and dynamical symmetry group</i>	149
2. <i>Quantum version (GCS)</i>	152
3. <i>Quantum version. The representation in the form of a path integral over GCS</i>	166
4. <i>Quantum version. Some concrete models with dynamical symmetry</i>	169
5. <i>Weakly nonideal Bose gas. A classical approach</i>	178

Chapter 6.

<i>Bose gas, integrable NSE and Landau-Lifshitz models</i>	183
1. <i>Quantum models and nonlinear classical models corresponding to them.</i> <i>A new formulation of the reduction procedure</i>	183
2. <i>Nonlinear one-dimensional integrable models</i>	187
3. <i>The isotropic Landau-Lifshitz $SU(1,1)$ model</i>	189
4. <i>Bose gas models and nonlinear sigma models. Summary</i>	203
5. <i>The third version - The sigma-model representation connected with</i> <i>the nonlinear Schrödinger equation</i>	205
6. <i>On the reduction procedure</i>	208

Chapter 7.

ϕ^6 <i>theory and Bose-drops</i>	211
1. <i>General relations and solitons - drops (particle-like solutions)</i>	212
2. <i>Condensate states and their weak excitations</i>	215
3. <i>Localized soliton-like excitations of the condensate</i>	218
<i>References</i>	221

PART IV. SOLITON-LIKE SOLUTIONS IN ONE-DIMENSION	227
Chapter 8.	
<i>The class of soliton solutions to the vector version of NSE with self-consistent potentials</i>	227
1. <i>Soliton solutions to the $U(n)$ NSE. Linearization method</i>	227
2. <i>$U(2)$ NSE. Dubrovin-Krichever technique</i>	231
3. <i>The self-consistent conditions</i>	238
4. <i>$U(2)$ NSE. A modification of the Dubrovin-Krichever technique</i>	242
5. <i>$U(n)$ system with the Boussinesq potential</i>	246
Chapter 9.	
<i>The existence of soliton-like solutions</i>	255
1. <i>Virial relations</i>	255
2. <i>Mechanical analogy method</i>	261
Chapter 10.	
<i>Soliton stability</i>	267
1. <i>Stability of hole-like excitations in the ϕ^6 model of nonlinear Schrödinger equation. The spectral analysis</i>	270
2. <i>Stability of drop-like solitons. Variational methods</i>	273
3. <i>Structural stability</i>	281
<i>References</i>	283
PART V. PHENOMENOLOGY OF $D = 1$ SOLITONS	289
Chapter 11.	
<i>Dynamics of the formation and interaction of plane solitons</i>	289
1. <i>Computational procedures</i>	290
2. <i>KdV-like equations</i>	291
3. <i>NSE-like equations</i>	296
4. <i>Equation for induced processes</i>	301
5. <i>Relativistically invariant equations (RIE)</i>	304
6. <i>Bound states of solitons (bions)</i>	306
7. <i>Kink-antikink interactions in the ϕ^4 model</i>	309
8. <i>Kink-antikink collisions in the MSG model</i>	316
9. <i>Bions in the ϕ^4 theory</i>	318
10. <i>Small-amplitude expansions</i>	320
Chapter 12.	
<i>Structural stability and pinning of solitons</i>	323
1. <i>Static bound states</i>	325
2. <i>Bifurcational perturbation theory</i>	328
3. <i>Static states of the long Josephson junction with a single inhomogeneity</i>	334
4. <i>Passing region</i>	339

Chapter 13.

<i>Dynamical structure factors of soliton gas</i>	345
1. <i>General technique to calculate the dynamical formfactors of solitons</i>	349
2. <i>Dynamic structure factor scattering on a soliton gas.</i> <i>The SG model: phenomenological approach</i>	352
3. <i>CsNiF₃ and the SG model</i>	363
4. <i>The ideal gas phenomenology and the ϕ^4 model</i>	368
5. <i>Soliton gas kinetics</i>	369
6. <i>Turbulence of a soliton gas</i>	375
<i>References</i>	378

PART VI. MANY-DIMENSIONAL SOLITONS..... 391

Chapter 14.

<i>Existence and stability</i>	391
1. <i>Existence</i>	392
2. <i>Quasi-stationary solitons</i>	400
3. <i>Stability of many-dimensional stationary solitons</i>	402
4. <i>Static ring-shaped fluxons (the structure stability)</i>	409

Chapter 15.

<i>Pulsons and Q-solitons</i>	413
1. <i>Collapse of circular and spherical bubbles</i>	413
2. <i>Properties of pulsons</i>	415
3. <i>Pulson stability</i>	418
4. <i>Pulson interaction</i>	420

Chapter 16.

<i>Interaction of Q-solitons</i>	429
1. <i>Nonrelativistic models</i>	429
2. <i>Relativistic models</i>	434
3. <i>Formfactors and DSF</i>	441
<i>References</i>	445

<i>Index</i>	449
