Preface xi
Acknowledgements xiii

Chapter 1 Bäcklund and Involutory Transformations 1

1.1 Bäcklund Transformations 1
1.2 Nonlinear Boundary Value Problems for the Burgers' Hierarchy. Reduction via a Bäcklund Transformation 5
1.3 Application to Nonlinear Infiltration with Prescribed Boundary Flux 11
1.4 Initial Value Problems and the Thomas Transformation. Reduction to Riemann-Volterra Canonical Form 14
1.5 Reciprocal Transformations and Nonlinear Boundary Value Problems 16
1.6 Application to Nonlinear Heat Conduction 20
1.7 Reduction of Nonlinear Boundary Value Problems via Coupled Reciprocal and Bäcklund Transformations 33
1.8 Application to Two-Phase Flow in a Porous Reservoir 37
1.9 A Generalized Reciprocal Transformation. Application in Nonlinear Visco-Elastic Wave Propagation 48
1.10 Coupled Inverse and Reciprocal Bäcklund Transformations. Reduction of a Nonlinear Shallow Water Wave System 61
1.11 A Model of Atmospheric Frontogenesis. Reduction via a Reciprocal Transformation 76

Chapter 2 Bergman-Type Expansion Methods. Nonlinear Moving Boundary and Stefan-Boltzmann Problems 89

2.1 Introduction 89
2.2 1 + 1 Dimensional Stefan Problems 90
2.3 Iterated Error Integral Expansions of Bergman-Type 92
2.4 Conditions at the Moving Boundary 98
2.5 The Classical Neumann Solution 104

2.6 Single Phase Moving Boundary Problems in Nonlinear Heat Conduction 106
2.7 Two-Phase Stefan Problems in Nonlinear Heat Conduction. Application of a Reciprocal Transformation 111
2.8 A Spherical Reaction Problem 117
2.9 Heat Conduction in an Inhomogeneous Half-Space Subject to a Nonlinear Boundary Condition 123
2.10 A Stefan–Boltzmann Nonlinear Boundary Value Problem. Padé Extension of Bergman Series 134

Chapter 3 Model Constitutive Laws 147

3.1 Model Constitutive Laws and Reduction to Canonical Form 147
3.2 Ermakov Systems, Nonlinear Superposition and Weak Bäcklund Transformations 150
3.3 Application to Large Amplitude Oscillation in a Thin-Walled Tube of Mooney–Rivlin Material 155
3.4 Loewner-Type Bäcklund Transformations and Nonlinear Wave Propagation. Reduction to Hyperbolic Canonical Form 169
3.5 Termination of Bergman Series and Solution of a Class of Nonlinear Cauchy Initial Value Problems 179
3.6 The Finite Plane Strain Deformation of Elastic Materials. A Class of Parametric Strain Energy Potentials. Harmonic Media 189
3.7 Adkins' Duality Principle. Application to the Plane Strain Deformation of a Mooney–Rivlin Material 204

Chapter 4 Invariance Group Analysis and Its Applications 211

4.1 Introduction and Literature 211
4.2 Construction of Lie Invariance Groups. Infinitesimal Transformations. Nth Extension. Canonical Variables and Symmetry Reduction 213
4.3 Invariance Group Properties of a Nonlinear Wave Equation 226
4.4 Invariance Group Properties of a Nonlinear Visco-Elastic System 234
4.5 Lie Algebras. Commutator Tables 238
4.6 Invariant Boundaries. Application to a Class of Stefan-Type Moving Boundary Problems 241
4.7 Convective Heat Transfer in Power Law Fluids. Direct Group Analysis of a Boundary Layer System 246
4.8 Shock Propagation in Reaction Gasdynamics. Group Determination of Model Reaction Rate Laws 251
4.9 Group Invariant Deformation of a Neo-Hookean Material 263
4.10 The Von Kármán Elastic Plate Equations 271
4.11 The Soliton Connection. The Korteweg-De Vries and Kadomtsev-Petviashvili Equations 274
4.12 The Motion of a Rotating Shallow Liquid in a Rigid Container 285
4.13 Group Analysis of the Navier-Stokes Equations. Application to a Rotating Cylinder Problem 308
4.14 Lie Group Analysis of Ordinary Differential Equations 314

4.15 Conversion of Boundary Value Problems to Initial Value Problems 315
4.16 Exact Shooting and Eigenvalue Problems 330
4.17 Group Invariance and Calculation Near a Singularity 340
4.18 Group Properties and Finite Difference Schemes 342
4.19 Symmetry Group Calculations and Computer Algebra Packages 345

Appendix I Tables of Symmetry Group Generators 347

A.I The 1 + 1-Dimensional Nonlinear Diffusion Equation 347
A.II The Potential Burgers' Equation 348
A.III The Hopf Equation 349
A.IV 1-Dimensional Motion of a Visco-Plastic Material 350
A.V The 2 + 1-Dimensional Classical Wave Equation 351
A.VI The 1 + 1-Dimensional Semi-Linear Wave Equation 352
A.VII The Nonlinear Cubic Schrödinger Equation 353
A.VIII Boussinesq-Type Equations 354
A.IX A Generalized Korteweg–DeVries–Burgers' Equation 355
A.X A Generalized Cylindrical Kadomtsev–Petviashvili Equation 357
A.XI The Jimbo–Miwa Equation 358
A.XII The N-Dimensional Classical Laplace Equation 359
A.XIII Liouville-Type Equations of Quantum Gravity Theory 360
A.XIV Helmholtz-Type Equations in Cylindrical Co-ordinates 361
A.XV The Axially-Symmetric Classical Wave Equation 362
A.XVI A Three-Dimensional Nonlinear Schrödinger Equation 363
A.XVII The Davey–Stewartson WaterWave System 364
A.XVIII The Equations of Motion of a Polytropic Gas 365
A.XIX The Non-Steady Potential Homentropic Flow Equation 367
A.XX A Three-Dimensional Incompressible Boundary Layer System 368
A.XXI A Three-Dimensional Steady Boundary Layer System: Arbitrary Surface 370
A.XXII A Two-Dimensional Incompressible Boundary Layer System 370
A.XXIII A Two-Dimensional Boundary Layer System with Prescribed Pressure 371
A.XXIV A Two-Dmensional Steady Boundary Layer System with Moment Stresses 373
A.XXV The 3 + 1-Dimensional Lin–Tsien Equation of Transonic Gasdynamics 373
A.XXVI A Two-Dimensional Non-Steady Transonic Gasdynamics Equation 374
A.XXVII A Steady Transonic Gasdynamics Equation 375
A.XXVIII A Baroclinic Layer System in Oceanography 376
A.XXIX 1 + 1 Dimensional Liquid Motion in Long Pipes 376
A.XXX The Non-Steady Axisymmetric Incompressible Viscous Flow Equations 377
A.XXXI A Steady Heat Convection System 378
A.XXXII A Longitudinal One-Dimensional Plasma Motion System 378
A.XXXIII A One-Dimensional Two-Component Plasma Model 379
A.XXXIV A Non-Steady Dissipative Magnetohydrodynamic System 380
A.XXXV A Steady Non-Dissipative Magnetohydrodynamic System 381
A.XXXVI A System Descriptive of a Relativistic Pencil of Charged Particles 381

A.XXXVII A Non-Linear Elastic String System 383
A.XXXVIII A Nonlinear Moving Threadline System 383
A.XXXIX An Elastostatic System Governing the Deformation of an Incompressible Neo-Hookean Material 384
A.XXXX Maxwell's Equations in a Vacuum 385
A.XXXXI Supplementary Sources of Symmetry Group Analysis 386

Appendix II The Nonlinear Superposition Principle for Pinney's Equation: Derivation via Lie Group Theory 387

Appendix III Glossary of Lie-Algebraic Terms 390
