

## CONTENTS

Series Editor's Preface.....	v
Foreword .....	vii
<b>Chapter 1</b>	
Linear Waves .....	1
Sinusoidal Waves.....	1
Linear Lattice .....	3
Shallow-Water Waves .....	6
<b>Chapter 2</b>	
Surface Waves (1) .....	9
The Birth of Hydrodynamics .....	9
Trochoidal Waves .....	10
The Beginning of Water Tank Experiments.....	16
Euler's Equation of Motion .....	16
<b>Chapter 3</b>	
Surface Waves (2) .....	21
Irrotational Motion .....	21
Irrotational Waves of Infinitely Deep Water .....	23
Wave Form.....	26
Drift of Water by Waves.....	28
Solitary Waves on Shallow Water.....	29
<b>Chapter 4</b>	
The KdV Equation .....	35
Velocity Potential .....	35
Infinitesimal Shallow Water Waves (Linear Approximation) .....	37
Shallow Water Waves .....	39
Ordering of Small Quantities .....	42
The KdV Equation .....	43

**Chapter 5**

Particular Solutions of the KdV Equation .....	47
The Dimensionless KdV Equation .....	47
The Stationary Solution to the KdV Equation .....	48
Solitary Waves .....	50
Periodic Waves .....	53

**Chapter 6**

Two-Soliton Solutions .....	57
The Two-Soliton Solution .....	57
Asymptotic Forms .....	60
Motion of the Center of Mass of Solitons .....	62
Examples .....	65

**Chapter 7**

Supplements to Solitons .....	67
Historical Background .....	67
Discovery of the Soliton .....	69
Nonlinear Terms and Dispersion Terms .....	70
The KdV Case .....	72

**Chapter 8**

Solitons and Eigenvalues .....	75
Miura's Transformation .....	75
Trial and Error .....	78
The Eigenvalue Equation for the KdV .....	78
Eigenvalue of a Soliton .....	80
Eigenvalues of Two-Soliton Solutions .....	81
Multi-Soliton States and Motions Other Than Solitons .....	83

**Chapter 9**

Multi-Soliton Solutions of the Schrödinger Equation .....	85
Eigenvalue Equations Associated with the KdV Equation .....	85
The Single Soliton Case .....	86
Solutions with Many Parameters .....	88
Other Propositions .....	91

**Chapter 10**

The Inverse Problem of the Schrödinger Equation .....	95
Wave Function and Potential .....	95
Continuous Spectrum .....	97
Scattering .....	97
Bound State .....	98

Inverse Problem .....	99
Supplementary Notes .....	101
<b>Chapter 11</b>	
The Inverse Problem of the KdV Equation .....	107
Time Rate of Change of $\varphi$ .....	107
Time Dependence of Scattering Data .....	111
Soliton Solution .....	114
<b>Chapter 12</b>	
Non-Linear Lattices .....	117
Computer Experiments by Fermi <i>et al.</i> .....	118
An Unexpected Result .....	118
Continuum Approximation .....	120
Derivation of the KdV Equation .....	122
<b>Chapter 13</b>	
Dual Lattices .....	125
Equations of Motion .....	125
Dual Relations .....	127
Examples of Linear Lattices .....	129
LC Circuits .....	131
<b>Chapter 14</b>	
Lattice Solitons .....	135
Exponential Interaction .....	135
Simple Solutions (Solitary Waves, Solitons) .....	139
The Two-Soliton Solution .....	140
Collision of Solitons .....	143
<b>Chapter 15</b>	
Conserved Quantities of Lattice Waves .....	149
Matrix Equation of Motion .....	149
Eigenvalues of the Matrix $L$ .....	152
Unitary Equivalence .....	154
Conserved Quantities .....	157
Equations Associated with the Lattice .....	157
<b>Chapter 16</b>	
Hirota's Method .....	163
Nonlinear Lattices .....	163
N-Soliton Solutions .....	166
KdV Equation .....	169

Soliton Solution of the KdV Equation .....	171
<b>Chapter 17</b>	
The Initial Value Problem of an Infinite Lattice .....	173
Infinite Lattices .....	174
Scattering Data .....	178
Discrete Integral Equation .....	179
Correspondence between Lattices and the KdV .....	181
<b>Chapter 18</b>	
Multi-Soliton Solutions .....	185
Multi-Soliton Solutions .....	185
One-Soliton Solution .....	190
Two-Soliton Solution .....	194
<b>Chapter 19</b>	
The Relation between Integrable Lattices and KdV Systems .....	197
Continuum Approximation .....	197
NS Transformation .....	200
The Soliton as an Example .....	203
Transformation of the Inverse Scattering Method .....	204
<b>Chapter 20</b>	
Transformation between Two Lattices .....	209
The Kac-Moerbeke System .....	210
Relation between the KM System and Lattices .....	211
The Bäcklund Transformation .....	212
Canonical Transformation .....	216
<b>Chapter 21</b>	
Thermal Motion in the Lattice .....	219
Probability Distribution .....	219
Temperature and Pressure .....	221
Linear Lattices .....	222
Hard Sphere Systems .....	223
Nonlinear Lattices .....	225
<b>Chapter 22</b>	
Lattice Cnoidal Waves .....	229
Harmonic Oscillators and Nonlinear Lattices .....	229
Equations of Motion .....	230
Elliptic Functions .....	231
The Soliton Solution .....	236

<b>Chapter 23</b>	
The $\mathcal{G}$ -Function and Lattice Waves .....	239
Cnoidal Waves .....	239
Relation between Sinusoidal Waves and Solitons .....	242
$\mathcal{G}$ -Functions .....	245
The Addition Formula for $\mathcal{G}_0(\nu)$ and Cnoidal Waves.....	246
Supplement (Proof of (40)).....	248
<b>Chapter 24</b>	
Integrable and Non-Integrable Systems .....	251
Three-Particle Systems .....	251
Chaotic Motion .....	254
Exponential Lattices .....	258
Conserved Quantities of Three-Particle Lattices .....	261
<b>Chapter 25</b>	
Solution of the Three-Particle Cyclic System .....	265
Letter of M. Kac .....	265
Spectrum of a Cyclic Three-Particle System .....	266
Auxiliary Spectrum .....	269
Time Change of an Auxiliary Spectrum .....	273
<b>Chapter 26</b>	
Method of Solving Cyclic Lattices (1).....	277
Summary of the Results of the Preceding Chapter .....	277
Cyclic Lattices .....	278
The Discrete Hill's Equation .....	279
Discriminants .....	282
Auxiliary Spectrum .....	285
<b>Chapter 27</b>	
Method of Solving Cyclic Lattices (2).....	289
Rate of Change of Fundamental Solution $\varphi_1$ .....	290
Rate of Change of $\varphi_2$ and the Discriminant .....	291
Rate of Change of Auxiliary Spectra .....	293
Integration of Auxiliary Spectra .....	295
The Case of $g$ Gaps .....	296
<b>Chapter 28</b>	
Inverse Spectral Problems and Solutions for Cyclic Systems .....	299
Riemann Surface .....	300
Multivariable $\mathcal{G}$ -Function.....	302
Solution of a Cyclic Lattice .....	306

**Chapter 29**

Examples of Cyclic Systems (1) .....	311
General Formulas .....	311
Example 1: A Cnoidal Wave .....	312
Example 2: Three-Particle Systems .....	314
Integration by the General Method .....	317

**Chapter 30**

Examples of Cyclic Systems (2) .....	327
Solution by the General Method .....	327
Jacobian Elliptic Functions .....	330

Supplements .....	341
-------------------	-----

Bibliography .....	361
--------------------	-----

Index .....	367
