Preface	
Chapter 1 Classification of second order systems of partial differential equations	1
1. Introduction	1
2. Equivalence between systems of partial differential equations	2
3. Classification of biquadratic forms	6
4. Canonical form (A)	10
5. Canonical form (B)	15
6. Classification of canonical forms (A) and (B)	16
7. Unique solvability of Dirichlet problem for elliptic systems	17
References	27
Chapter 2 Power series methods for elliptic systems of first kind	29
1. Introduction	29
2. Dirichlet problem	30
3. Neumann problem	34
4. Third problem	41
5. Fourth problem	45
6. Fifth problem	50
References	55
Chapter 3 Bi-analytic functions of type (λ, k) and their applications	56
1. Introduction	56
2. Bi-analytic functions of type (λ, k)	57
3. Integrals and derivatives for bi-analytic functions of type (λ, k)	61
4. Cauchy integral formula and power series expansion for bi-analytic functions of type (λ, k)	67
5. Connection between type (λ, k) bi-analytic functions and Sander's bi-analytic functions	75
6. Dirichlet problem	80
7. Second problem of system (E_2)	91
8. Neumann problem of system (E_1)	93

9. Cauchy type integral of type (λ, k) bi-analytic functions and Riemann problem	95
References	102
Chapter 4 Boundary value problems for plane elasticity and spline finite strip methods	104
1. Introduction	104
2. Applications in isotropic elasticity	105
3. Applications in anisotropic elasticity	108
4. Spline finite strip in plane stress analysis	115
References	143
Chapter 5 Systems of equations of composite type	145
1. Introduction	145
2. Canonical form and general solutions	145
3. First problem for composite systems	149
4. Second problem for systems (C_1)	156
5. Opposite vertex theorem and its applications	158
References	163
Chapter 6 Parabolic systems	164
1. Introduction	164
2. Cauchy problem	164
3. First problem	166
4. Second problem	168
References	169
Chapter 7 Systems of differential equations of hyperbolic type	170
1. Introduction	170
2. Cauchy problem	174
3. Functional equation	180
4. Unique solvability of Goursat problem	186
5. Unique solvability of Darboux problem	195
6. Unique solvability of problem 4	209
7. Opposite vertex theorem and its applications	212
8. Functional equations: some approximate solution approaches	229
References	240

Chapter 8 Discrete phenomenon of uniqueness of Goursat problem for systems of hyperbolic equations	242
1. Introduction	242
2. Discrete phenomenon of functional equations	244
3. Discrete phenomenon of uniqueness of solution of characteristic problem (Goursat problem)	248
4. Influence of lower degree term on characterization of the solution	282
References	289
Postscript	292
