

C O N T E N T S

CHAPTER I. INTRODUCTION	1
CHAPTER II. GENERAL IDEAS OF THE RECURSION OPERATOR METHOD AND ADJOINT REPRESENTATION	18
2.1. Main relations	18
2.2. Adjoint representation	24
2.3. Adjoint representation for two-dimensional spectral problems	28
CHAPTER III. LINEAR MATRIX BUNDLE	31
3.1. Backlund-Calogero group	31
3.2. General form of the integrable equations. Examples	36
3.3. Integrals of motion and group properties	42
3.4. Hamiltonian and Lagrangian structures of the integrable equations	47
3.5. Hierarchy of Poisson brackets between the scattering matrix elements	52
3.6. Elementary and soliton Backlund transformations. Formulas of nonlinear superposition and the families of solutions	57
3.7. Elementary Backlund transformations and family of solutions for $N = 2$	61
CHAPTER IV. GENERALIZATIONS OF THE LINEAR BUNDLE	65
4.1. Matrix spectral problem with an arbitrary semisimple matrix A	65
4.2. Potential with nonzero asymptotics	71
4.3. Z_2 graded potential	75
4.4. Integrable equations in a gauge free form	78

4.5. Chiral fields and WKI spectral problems	84
CHAPTER V. BACKLUND-CALOGERO GROUP AND GENERAL INTEGRABLE EQUATIONS UNDER REDUCTIONS	91
5.1. Reduction problem	91
5.2. Matrix Z_N reduction (A-gauge)	95
5.3. Matrix Z_N reduction (R-gauge)	104
5.4. The examples: Z_2 reduction and nonabelian two-dimensional Toda lattice	109
5.5. Z_N and \tilde{Z}_N reductions and differential spectral problem	113
5.6. Reductions to the classical Lie algebras	116
5.7. Reduction $\rho = -\rho^T$	121
CHAPTER VI. QUADRATIC BUNDLE WITH Z_2 GRADING	127
6.1. Recursion operator and Backlund-Calogero group..	127
6.2. General form of the integrable equations and their Hamiltonian structures	131
6.3. Relativistic-invariant integrable equations ...	138
6.4. Elementary Backlund transformations	143
6.5. Nonlinear superposition formulas. The family of solutions	146
CHAPTER VII. POLYNOMIAL AND RATIONAL BUNDLES	150
7.1. Some general relations and Martinez Alonso's recipe	150
7.2. General quadratic matrix bundle	152
7.3. Jaulent-Miodek bundle	156
7.4. Generalized Schrödinger spectral problem	161
7.5. Other spectral problems	165
CHAPTER VIII. GENERAL DIFFERENTIAL SPECTRAL PROBLEM	168
8.1. Gauge group and fundamental relation	168

8.2. Recursion operator	172
8.3. Backlund-Calogero group	177
8.4. Gauge invariance and manifestly gauge-invariant formulation	180
8.5. General form of the integrable equations and their transformation properties	184
8.6. Family of Hamiltonian structures	189
8.7. Examples: $N = 2$	196
8.8. Examples: $N = 3$ and $N = 4$	204
CHAPTER IX. GENERALIZATION AND REDUCTIONS OF THE DIFFE- RENTIAL SPECTRAL PROBLEM AND INTEGRODIFFE- RENTIAL SPECTRAL PROBLEMS	208
9.1. Generalized differential spectral problem	208
9.2. Reductions of the differential spectral problem	212
9.3. Pseudodifferential spectral problem	214
9.4. Riemann-Hilbert spectral problem	219
CHAPTER X. TWO-DIMENSIONAL MATRIX SPECTRAL PROBLEM	222
10.1. Direct scattering problem and fundamental relation	222
10.2. Backlund-Calogero group	226
10.3. General structure of the integrable equa- tions and their group properties	231
10.4. Elementary Backlund transformations, nonlinear superposition formulas and families of solutions	237
10.5. The examples: $N = 2$	241
CHAPTER XI. TWO-DIMENSIONAL DIFFERENTIAL SPECTRAL PROBLEM	245
11.1. Bilocal tensor product	245
11.2. Recursion operators	248

11.3. Backlund-Calogero group, general form of integrable equations and their group properties	253
11.4. Transformation properties of the Backlund transformations and integrable equations under the gauge group	257
11.5. Backlund transformations and integrable equations at $N = 2$	260
11.6. Examples: $N = 3$	263
11.7. Generalized two-dimensional differential spectral problem	266
11.8. Multidimensional nonstationary Schrödinger spectral problem	268
CHAPTER XII. TOWARDS TO THE GENERAL THEORY OF RECURSION STRUCTURE OF NONLINEAR EVOLUTION EQUATIONS	
12.1. Algebraic and geometric approaches	271
12.2. Weak recursion operators	275
12.3. H -weak recursion operator	276
12.4. Ω -weak recursion operator	279
12.5. Strong recursion operator	282
12.6. Recursion operator for classical wave systems	285
12.7. Expansion over nonlinearity and formal recursion operator	289
12.8. Regular recursion operator	295
12.9. τ -scheme	300
12.10. Symmetries and integrals of motion for general classical nonlinear waves systems	303
