## Part I. Survey Lectures on the Mathematical Foundations of the Finite Element Method

*Ivo Babuška and A. K. Aziz*

Foreword . . . . .	3
1. Preliminary Remarks . . . . .	5
2. The Fundamental Notions . . . . .	15
3. Properties of Solutions of Elliptic Boundary Value Problems . . . . .	47
4. Theory of Approximation . . . . .	83
5. Variational Principles . . . . .	111
6. Rate of Convergence of the Finite Element Method . . . . .	185
7. One Parameter Families of Variational Principles . . . . .	243
8. Finite Element Method for Non-Smooth Domains and Coefficients . . . . .	265
9. The Problems of Perturbations in the Finite Element Method . . . . .	285
10. The Eigenvalue Problem . . . . .	303
11. The Finite Element Method for Time Dependent Problems . . . . .	345

## Part II. Invited Hour Lectures

Piecewise Analytic Interpolation and Approximation in Triangulated Polygons . . . . .	363
<i>Garrett Birkhoff</i>	
Approximation of Steklov Eigenvalues of Non-Selfadjoint Second Order Elliptic Operators . . . . .	387
<i>James H. Bramble and John E. Osborn</i>	

The Combined Effect of Curved Boundaries and Numerical Integration in Isoparametric Finite Element Methods . . . . .	409
<i>P. G. Ciarlet and P.-A. Raviart</i>	
A Superconvergence Result for the Approximate Solution of the Heat Equation by a Collocation Method . . . . .	475
<i>Jim Douglas, Jr.</i>	
Some $L^2$ Error Estimates for Parabolic Galerkin Methods . . . . .	491
<i>Todd Dupont</i>	
Computational Aspects of the Finite Element Method . . . . .	505
<i>S. C. Eisenstat and M. H. Schultz</i>	
Effects of Quadrature Errors in Finite Element Approximation of Steady State, Eigenvalue, and Parabolic Problems . . . . .	525
<i>George J. Fix</i>	
Experience with the Patch Test for Convergence of Finite Elements . . . . .	557
<i>Bruce M. Irons and Abdur Razzaque</i>	
Higher Order Singularities for Interface Problems . . . . .	589
<i>R. B. Kellogg</i>	
On Dirichlet Problems Using Subspaces with Nearly Zero Boundary Conditions . . . . .	603
<i>J. Nitsche</i>	
Generalized Conjugate Functions for Mixed Finite Element Approximations of Boundary Value Problems . . . . .	629
<i>J. T. Oden</i>	
Finite Element Formulation by Variational Principles with Relaxed Continuity Requirements . . . . .	671
<i>Theodore H. H. Pian</i>	
Variational Crimes in the Finite Element Method . . . . .	689
<i>Gilbert Strang</i>	
Spline Approximation and Difference Schemes for the Heat Equation . . . . .	711
<i>Vidar Thomée</i>	

## Part III. Short Communications

The Extension and Application of Sard Kernel Theorems to Compute Finite Element Error Bounds . . . . .	749
<i>R. E. Barnhill, J. A. Gregory, and J. R. Whiteman</i>	
Two Types of Piecewise Quadratic Spaces and Their Order of Accuracy for Poisson's Equation . . . . .	757
<i>Alan E. Berger</i>	
A Method of Galerkin Type Achieving Optimum $L^2$ Accuracy for First Order Hyperbolics and Equations of Schrödinger Type . . . . .	763
<i>J. E. Dendy, Jr.</i>	
Richardson Extrapolation for Parabolic Galerkin Methods . . . . .	767
<i>G. Fairweather and J. P. Johnson</i>	
Geometric Aspects of the Finite Element Method . . . . .	769
<i>William J. Gordon and Charles A. Hall</i>	
The Use of Interpolatory Polynomials for a Finite Element Solution of the Multigroup Diffusion Equation . . . . .	785
<i>H. G. Kaper, G. K. Leaf, and A. J. Lindeman</i>	
A "Local" Basis of Generalized Splines over Right Triangles Determined from a Nonuniform Partitioning of the Plane . . . . .	791
<i>Lois Mansfield</i>	
Least Square Polynomial Spline Approximation . . . . .	793
<i>Paul D. Patent</i>	
Subspaces with Accurately Interpolated Boundary Conditions . . . . .	797
<i>Ridgway Scott</i>
