Preface

Introduction 1

Part I Analysis on the Heisenberg group

Guide to Part I 10

1. Symbols on the Heisenberg group 13
2. A comparison 27
3. \square_b on functions and the solvability of the Lewy equation 36

Part II Parametrix for the $\bar{\partial}$ -Neumann problem

Guide to Part II 44

4. Admissible coordinates on strongly pseudo-convex CR manifolds 48
5. Levi metrics 64
6. \square on $(0, 1)$ forms 70
7. Local solution of the Dirichlet problem for \square 79
8. Reduction to the boundary 101
9. A parametrix for \square near bM , $n > 1$ 110
10. A parametrix for \square near bM , $n = 1$ 118

Part III The estimates

Guide to Part III 130

11. Review of the L^2 theory 132
12. The Besov spaces $B^p(\mathbb{R}^m)$ 134
13. The spaces $\Lambda_\alpha(\mathbb{R}^m)$ and $\Lambda_\alpha(\mathbb{R}_+^{m+1})$ 141
14. The spaces B^p , L_1^p , and Λ_α on M and bM 149
15. Main results 153
16. Solution of $\bar{\partial}U = f$ 172
17. Concluding remarks 177

Summary of Notation 190
