PREFACE

1. Introduction

A.0.	The Identification Problem in Context	1
A.1.	Stochastic Respectability	3
A.2.	Distributed Systems	4
A.3.	Summary of Content	5

2. Notation, Definition, Theoretical Preliminaries

A.0.	Introduction	7
A.1.	Notation and Definitions	7
A.2.	Solution Properties of Linear Parabolic and Second-Order Hyperbolic Partial Differential Equations.	12
	A.2.1. Linear parabolic equations	12
	A.2.2. Linear, Second-Order Hyperbolic Equations	14
A.3.	The Galerkin Approximation Scheme	15
A.4.	Linear, Bilinear, and Quadratic Functionals on a Hilbert Space	19

3. Formal Definition of the State Identification Problem

A.0.	Introduction	23
A.1.	Definition of the Class of Systems Considered	23
	A.1.1. Systems Classification	23
	A.1.2. Examples of Parabolic and Hyperbolic Systems	24
A.2.	State Identification	26
	A.2.1. Mathematical Description	26
A.3.	Statistical Properties of the Refined Estimate	32

4. Characterization of the Solution of the State Identification Problem

A.0.	Introduction	35
A.1.	Parabolic Systems	35
	A.1.1. Remarks on the Results	50

A.2.	Hyperbolic Systems	52
A.3.	An Example of Constrained State Identification	62
A.4.	Concluding Remarks	67

5. Solution of the State Identification Problem

A.0.	Introduction	69
A.1.	Schemes for the Solution of the Identification Equations	69
A.1.1.	Riccati-like Decoupling	71
A.1.2.	Successive Approximation Technique	76
A.1.3.	The Mathematical Programming Problem Hypothesis.	77
A.2.	The Galerkin Technique	82
A.3.	Numerical Examples.	91
A.4.	Evaluation of the Numerical Results	97
A.5.	Summary	111

6. Summary and Extensions

A.1.	The Parameter Identification Problem.	113
Appendix 2.1.	Distribution Derivative, Example	117
2.2.	Error Estimates of Galerkin Approximation with Eigenfunctions	118
2.3.	Spline Approximation of System 1	120
2.4.	Convexity of a Quadratic Functional	126
2.5.	Proof of Uniqueness	127
2.6.	"Well-Set" Property	128
2.7.	Existence and Uniqueness of Extremals to $J(\mathbf{v})$	129
Appendix 3.1.	The Lumped Approximation to the Distributed Stochastic Model	132
Appendix 5.1.	Existence of an Affine Map between System y and Adjoint	136
Appendix 5.2.	Derivation of Equations for $P(x, \xi, t)$ and $\hat{y}(\xi, t)$	141
5.3.	The Variational Derivative	144
5.4.	Derivation of Some Identities	146
5.5.	Convergence of Conjugate Gradient Algorithm	148
References	149
Author Index	151
Subject Index	153
