<i>Preface</i>	<i>page ix</i>
1 Differential geometry	1
1.1 Differentiable manifolds	2
1.2 Geodesics	12
1.3 Exterior forms and integration on manifolds	20
2 Distribution theory	28
2.1 Distributions in \mathbf{R}^n	29
2.2 Operations on distributions	34
2.3 Distributions with compact support	38
2.4 Tensor products of distributions	40
2.5 Convolution and regularization	43
2.6 Linear differential operators	49
2.7 Examples	53
2.8 Distributions on a manifold	59
2.9 A special type of distribution	65
3 Characteristics and the propagation of discontinuities	72
3.1 Lorentzian geometry	73
3.2 Characteristics and bicharacteristics	76
3.3 The initial value problem for characteristics and null fields	81
3.4 Caustics	87
3.5 The propagation of discontinuities	91
3.6 Progressing waves	101
3.7 Simple progressing wave solutions of the ordinary wave equation	110

4	Fundamental solutions	<i>page</i> 116
4.1	The ordinary wave equation	117
4.2	The singular part of the fundamental solutions	129
4.3	The parametrix	138
4.4	Causal domains	146
4.5	The fundamental solutions	154
4.6	Trivial transformations	159
5	Representation theorems	166
5.1	Existence and uniqueness theorems	167
5.2	The reciprocity theorem	178
5.3	The Cauchy problem	181
5.4	Characteristic initial value problems	193
5.5	Tensor wave equations	203
5.6	The field of a time-like line source	212
5.7	Huygens' principle	221
6	Wave equations on n-dimensional space-times	228
6.1	The ordinary wave equation in n dimensions	229
6.2	Fundamental solutions	235
6.3	Existence, uniqueness and representation theorems	242
6.4	The method of descent	251
	<i>Appendix</i>	262
	<i>Bibliography</i>	273
	<i>Notation</i>	277
	<i>Index</i>	281
